

# PROTECTS THE HEART OF YOUR SYSTEM.

Real-time condition monitoring  
for control cabinets.

## THE NEW CABINET GUARD

Condition Monitoring where it matters.

# Condition monitoring that safeguards processes.

The control cabinet is the central hub where power supply, communication, and control converge. Even small changes in temperature, humidity, or vibration can affect system availability.

**Cabinet Guard** makes these conditions visible – continuously, reliably, and in real time.

## SECURITY & MONITORING

Door monitoring, alarms, and access control for greater operational safety.

## ENVIRONMENTAL SENSORS

Monitoring of temperature, humidity, pressure, movement, and vibration.

## DATA & TRANSPARENCY

Real-time condition data for informed decisions and analyses.

## EASY INTEGRATION

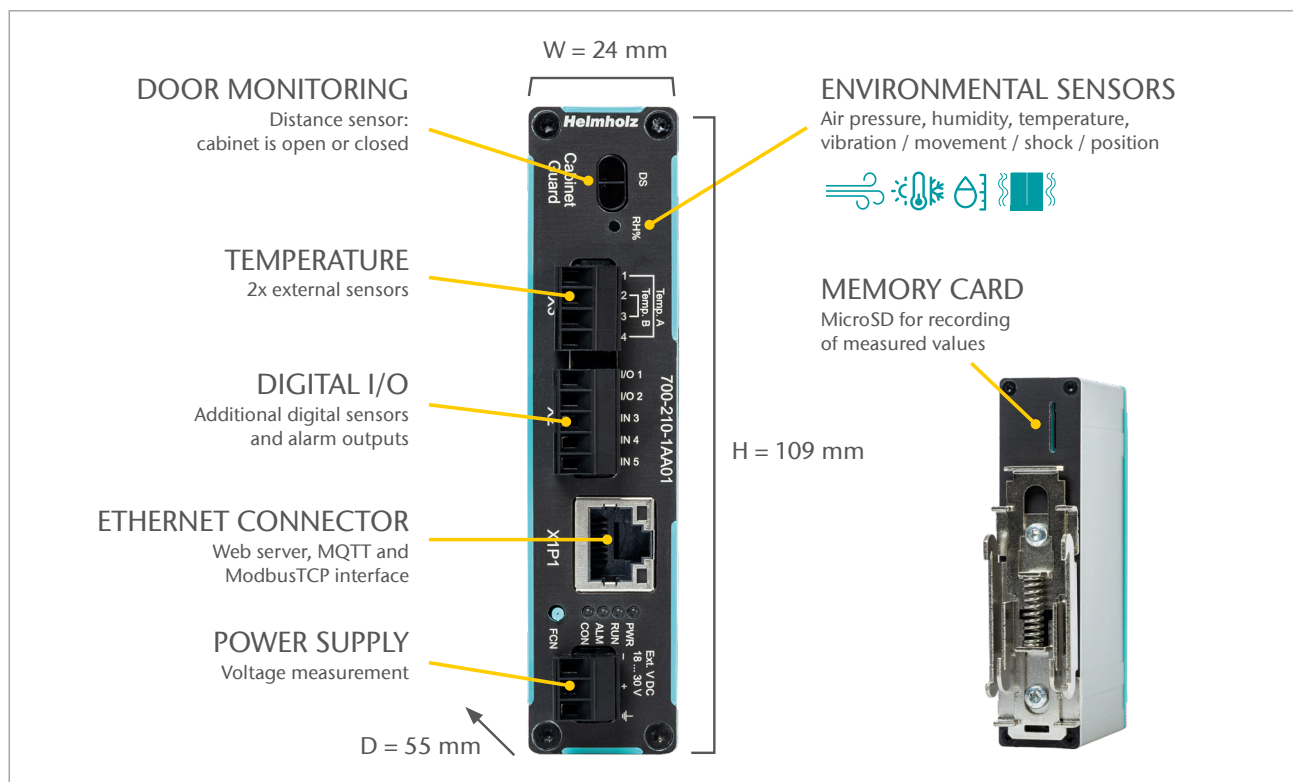

Compact (24 mm), suitable for retrofitting, and quick to commission.

## Your introduction to professional Condition Monitoring

Detect deviations early on, before they become a problem, and lay the foundation for stable processes and predictive maintenance. Cabinet Guard integrates seamlessly into existing automation and monitoring systems – without any additional software.

## Your advantages at a glance:

- Transparency exactly where disruptions occur.
- Early warning system for critical environmental and operating parameters.
- Ideal basis for condition monitoring and retrofitting.
- Seamless integration via RJ45, MQTT, ModbusTCP, alarm & data logging.
