Long Term Storage

When professional long-term storage MUST be a priority

Do you experience rapid changes in design and materials? Perhaps also shorter product life cycles and new products reaching the market faster and faster?

The problem is, you have to guarantee that all parts for the 'older' products are available. At Emporium Partners we are specialists in Long Term Storage of electronic components and our services are designed to support you and meet your individual needs.

We have a certified process coupled with patented technology to store your valuable and critical components in a secure and controlled environment, guaranteeing against corrosion, oxidation and other types of degradation.

We offer to distribute your goods wherever they are needed for production. In the meantime you will have full visibility of the goods stored.

In short, we manage and store your components as well as sell and distribute them if need be.

A patented solution

With our unique solution, **Emporium Product Preservation™**, we can reduce the aging processes of your components. Through our special method of conservation, you will be able to store electronic components for 20+ years or even longer!

With a Long Term Storage solution at Emporium Partners you can safely commit to long-term contracts with your customers for many years to come.

Quality is key

In all aspects of our Long Term Storage solution quality is a focus point. We work with ongoing quality controls and we are committed to providing a level of quality, consistent with client needs and requirements. We always ensure that the optimal conditions are indeed maintained for the entire period of storage. At Emporium Partners we have a solid monitoring system of all our storage facilities.

Customer case

The Challenge

An automotive industry leader needed a partner to store, quality assure and distribute critical electronic components whilst ensuring the goods maintained its quality and stayed free from oxidation.

Our Solution

At Emporium Partners we implemented a full inventory management solution. We moved, quality assured, catalogued and photographed the client's complete inventory. The periodic client reports and reviews have proved very useful to ensure the client's inventory stays in good quality, alive and is not forgotten.

Outcome

The client now has a solution, which ensured a long product lifecycle along with high internal visibility with easy access to details and immediate supply to our subcontractor. Emporium Partners now consolidate, purchase, test and re-distribute the product globally. In addition we have sold off part of the inventory, which the client no longer needed.

'It works. We knew the ROHS mandate would create problems due to our long product lifecycle. We did not have the solution in house. Emporium designed very impressive processes and systems to securely store and protect the electronic goods from oxidation. The fact that they can consolidate this type of material in one location and that they will then collect left-overs from our suppliers as well as ship parts where and when it's need is perfect. Furthermore, they take care of several other tasks that we would otherwise have to manage in house. It saved us a lot of resources and time. Together we are now exploring to do the same with our finished boards and metal products. Very professional!'

Material Manager, Automotive OEM

As part of our Long Term Storage solution we also pick and prepare parts for production and ensure there is no humidity in the component - this all occurs according to JEDEC standards.
