

## BLUMOTION for doors

### Even furniture doors close silently and effortlessly

You can now offer your customers improved closing comfort with the hinge side BLUMOTION assembly – without having to change your production processes.

#### Perfect motion with Blum's unique adaptive system

BLUMOTION's adaptive system automatically adjusts itself to different aspects such as door size, door weight and closing speed. The result is a perfect closing motion – silent and effortless – which never fails to fascinate.

Integrated overload safety feature. Even if the door is closed with full force, the integrated overload safety feature will protect the BLUMOTION system from damage. This ensures that, like all Blum products it will last for the life of the furniture.

#### Easy assembly and optimal use in each phase

BLUMOTION 973A can be easily inserted into CLIP top / CLIP hinges without the need for tools. No hinge assembly adjustment is required, the drilling depth remains unchanged. The decision whether or not to use BLUMOTION, can be made in each phase – by the manufacturer, retailer or end customer.

#### Harmonious design

The BLUMOTION 973A design meets the high design standards that we have set for our hinges. The combination appears integrated, harmonious and well balanced.

### Versatile application options. You have the choice.
