About us

Rosén Innovation AB, formerly known as Mark Trade Innovation, is a family business that's originally founded in 1981. The company has been developing and manufacturing lightweight lift pads in polyurethane since then with customers all over the world.

In 1990, we started our development of wheel chocks for large aircraft after realizing how straining it was for the operators to lift conventional heavy rubber chocks daily.

The development work was done together with the staff of Gothenburg Landvetter Airport who tested the product thoroughly before it was approved.

2-3 times lighter.

Rosén Innovation delivers lift pads that are 2-3 times lighter than the conventional rubber pads. This is a strong argument for offsetting strain on the operators and it also reduces the risk of pressure injuries on the car as they mould to the contour of the car. All this without losing it's durability and quality.

We manufacture.

Many different pads for both universal and specific use.

Very strong.

The material of our lifting pads is a super strong two component polyurethane. All our polyurethane products are made in our factory in Sweden and are 100% reusable.

Rosén Innovation works with a complete range of different types of lift pads for the vehicle industry.

We sell.

PUR-STEP

Ergonomic work mat - unbeatable durability and ergonomic relief.

The work mat is made of 2K polyurethane, which generates the highest material quality and thus usable in most working environments. The mat has an excellent relieving capacity, thanks to its unique ergonomic design, which eliminates and prevents common problems that occur in standing environments. Through its ergonomic profile, which induces muscular response, it stimulates increased blood circulation and alertness, which in the long run reduces sick leave. The edges are bevelled to minimise the risk of tripping over the mat. The mat is fully recyclable.

Material: Polyuretan

Thickness: 16mm

Weight: 3kg +/- 100g per 60x90cm.

Density: 400kg/m³ +/- 10 %

Temperature: -40 - +70

Can be made to measure.

Customize for desired thickness

Our rubber sheets have the stability and strength to give you a lot of mat for your money. The top layer of the mat consists of a 2-3mm thick rubber that provides good protection. The bottom layer is made of foamed PVC-free EPDM cellular rubber which creates good sag and durable bottom.

The 11 or 19 millimetre thick mat creates an ergonomic base that provides good relief for the knees and back.

The layers are glued together with an adhesive that can withstand tough stresses. The bevelled edges of the mat reduce the risk of tripping and allow for example work trolleys to be rolled over easily.
