

**Clip-Lok returnable transport boxes are used to easily transport certified weights.**

Clip-Lok's returnable transport boxes are designed to transport precision transport weights used by manufacturing industries to test and analyse their scales. These certified weights are very heavy. Our simple design of larger pallet blocks stabilises the pallet by proportionately distributing the load of these certified weights on the pallet blocks. The customer can build the packaging around the product, which makes handling very easy. No screws or nails are required during assembly and disassembly, which saves time.

Clip-Lok returnable boxes:

- are tailor made to suit needs of the customer
- can be loaded from all sides
- are screw and nail-free
- can be easily and quickly flat-packed to minimise storage space which can save up to 80% for return shipping
- can be stacked without the need for racking; thereby saving up to 80% transport costs
- are suitable for transport by road, rail, sea or air

Certified weights weighing 500kg ready to be packed in Clip-Lok Returnable Box.

Precision certified weights placed on the pallet with larger pallet blocks.

The Clip-Lok returnable transport box loaded with precision certified weight.

Clips and a clip tool to ensure a screw and nail free packaging experience.
