

COATIC

CHOOSE QUALITY

- Produced in Denmark
- User-friendly for everyone
- Performance beyond the ordinary

CONTEC COATING

Contec Coating is an innovative product produced in Denmark. We are part of Contec Group, a leading company within high performance concrete. For many years, Contec Group has produced and sold high performance binders all over the world, and we have developed a binder for the product that we today call Contec Coating. Contec Coating is a Performance Coating, which is in the same category as microcement, silk cement and polymer-cement mortar, but with the strongest quality on the market, as the base consists of high performance cement binder. As one of the only products on the market, our product offers phenomenal flexibility, simplicity and durability.

Contec Coating provides a raw concrete surface and the same product can be used for everything-you decide the consistency with the amount of water and therefore the same bucket can be used for both the floor in the living room, the wall in the shower, the stairs in the entrance and give the old garden furniture new life. Contec Coating can be used both indoors, outdoors and in wet rooms. You only have to add water to the mixture, and it can therefore easily be done by both private customers who are working on their own creative DIY projects, or by professionals who often work with larger surfaces, more square meters and can create completely specific surface expressions.

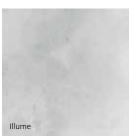

EVERYTHING IS HOMEMADE

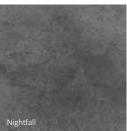

Contec Coating is produced in Denmark and offers a high range of opportunities. You can incorporate your personal logo, create textures, or give the surface a special pattern. Only you set the limits.

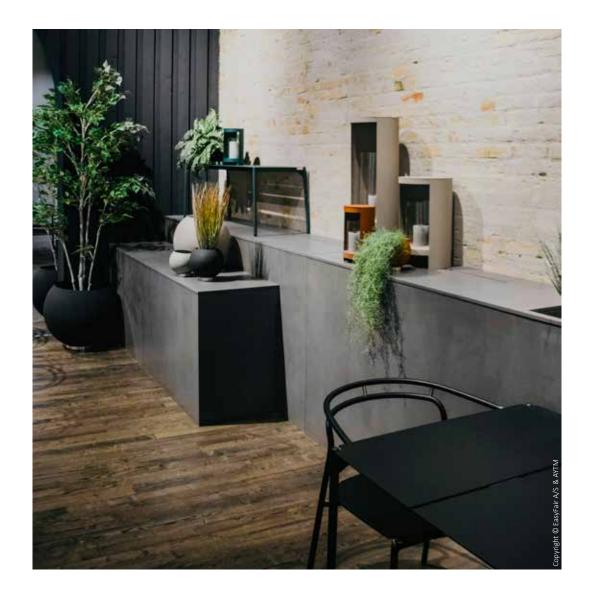

We have four standard colours that are always in stock, but we also produce special colours for the individual project at our factory in Aarhus.

WE ARE **NOT** MICROCEMENT!

Contec Coating is, as the only product on the market, based on high performance concrete, and the performance is beyond that of traditional coating products. Our vision is to offer you a high quality product, the most user-friendly and the strongest coating on the market.

We never compromise.

You get an uncomplicated solution for both large and small projects. You can in cooperation with us make your own designs when it comes to colours, texture and finish.

Let us inspire you for your next project.

CONTEC COATING WELCOMES YOU HOME

With Contec Coating, you can create a concrete surface on both new and existing surfaces in the absolute highest quality and achieve an inviting and timeless look with concrete in your interior. Contec Coating is simple to use, as there are few workflows and you only need to add water to the product. In addition, Contec Coating can be applied to almost any surface. Therefore, it is perfect for private DIY projects- even if you have not worked with any kind of concrete coating before.

The slightly rough expression of the concrete surfaces is easily softened with e.g. rugs and furniture in softer natural materials, and concrete stands in nice contrast to especially wood. Concrete surfaces are very practical, they are easy to clean and maintain.

Contec Coating is both material-saving and cost-reducing compared to solutions in cast or solid high performance concrete. At the same time, Contec Coating is a more flexible material with many application options and solutions, which makes it ideal for the home.

ENJOY A SHOWER WITH CONTEC COATING

Contec Coating is available with a sealer which is developed especially for wet rooms. In bathrooms and the like, it is important to always secure your surfaces as wet rooms. If you have an existing surface that is already secured, just start with Contec Coating. In the case of new construction, the surfaces in wet rooms must be secured before Contec Coating is used. From there it is easy. If you choose to do it yourself, you get everything you need of products and knowledgeable guidance from us, and if you are not the do-it-yourself type, we have some skilled partners who can help you.

It has become very popular to give one or more surfaces in the bathroom a concrete surface to create a raw and urban look. It could be time for some loving care for the old lime-stained sink or give your eyesore of 70s tiles an update and bring your bathroom into the 2020s.

DAGLIGVARER NAR DET PASSER DIG

LET CONTEC COATING BECOME A FIXTURE

The first impression is important, so why not give the best possible impression of your company? Contec Coating is a popular and obvious solution for creating modern interior. In a simple way, you can create big changes, whether it involves the reception, the shop, the café, the showroom or something completely different.

Contec Coating provides beautiful raw and durable concrete surfaces, and can be applied to everything from reception counters, floor and wall surfaces, plinths, stands, table tops, shelves and much more. The fact that the same material is repeated on several different elements can create a coherent expression and a common thread in the decor.

We can supply products with many different integrated functions, e.g. a logo or text. We also make holes for wires so that electronics can be stored away, integrated lighting and much more. The possibilities are many, and we are happy to help with both advice and design.

CONTEC COATING TAKES THE FLOOR

Contec Coating is a very popular choice for floors!

Concrete floors are a modern and exclusive solution, which is seen in more and more Scandinavian homes. This type of flooring especially fits into the popular New Yorker decor style that revolves around the raw, unpolished, industrial and rustic.

Contec Coating creates a thin concrete surface on an existing solid surface. It is therefore an ideal solution for renovation projects. Contec Coating fits all budgets, as you do not have to tear down, throw out and buy new. You can easily reuse what you have. At the same time you get a durable surface that lasts and is easy to style.

You can influence the expression of the finished result, as the finished look depends on the choices you make in terms of color and application tool. With Contec Coating you always get a unique look that can be adapted to your own wishes.
