RCT

Torsionally stiff flange couplings for pump drives

Your drive is our strength. Your strength is our drive.

General technical description

With the newly developed RCT couplings, REICH-KUPPLUNGEN offers an optimal drive solution for the connection of diesel engines to hydraulic pumps. The torsionally stiff design of the RCT coupling allows for shifting critical resonances to the range above the operating speed range and thus enables a subcritical operation of the drive without passing through detrimental torsional vibration amplitudes. The new RCT coupling, like the decade-long proven REICH ARCUSAFLEX coupling, is designed as an axially pluggable flange coupling. Its external teeth, however, have a robust metallic inner body with a thin-walled rubber coating so that torque shocks are dampened effectively. In addition, small axial, radial and angular offsets which are common to flanged hydraulic drives can be compensated for. Numerous standardized tooth profiles ensure a backlash-free clamping connection between the RCT coupling and the pump shaft. The coupling flanges are matched to SAE flywheel dimensions. As a supplementary service, REICH-KUPPLUNGEN also offers a multitude of bellhousing flanges through which the vast majority of internal combustion engines and hydraulic pumps can be connected. REICH-KUPPLUNGEN will be pleased to develop an optimal solution in line with the principle, D2C - Designed to Customer' for special types as well.

Essential features and advantages of the RCT coupling:

- Subcritical operation through high torsional stiffness
- Vibration and torque shock damping through flexible rubber coating
- High torque transmission capacity, fail-safe
- Suited for ambient temperatures from -25°C to +100°C
- Compact, robust, maintenance-free
- Easy assembly thanks to the plug-in type design
- Backlash-free shaft-hub connection
- Compensation of axial, radial and angular offsets
- Multiple spline options for the connection to the pump shaft
- Bellhousing flanges for almost any mounting situation

D2C - Designed to Customer

The principle of Designed to Customer describes the recipe for success of REICH-KUPPLUNGEN: Utilizing our product knowledge, our customers are supplied with couplings which are developed and tailor-made to their specific requirements. The designs are mainly based on modular components to provide effective and efficient customer solutions. The unique form of close cooperation with our partners includes consultation, design, calculation, manufacture and integration into existing environments. Adapting our manufacturing to customer-specific production and utilizing global logistics concepts provides better after sales service - worldwide. This customer-oriented concept applies to both standard products and production in small batch sizes.

The company policy of REICH-KUPPLUNGEN embraces, first and foremost, principles such as customer satisfaction, flexibility, quality, prompt delivery and adaptability to the requirements of our customers.

REICH-KUPPLUNGEN supplies not only a coupling, but a solution: Designed to Customer.
