AQUASLIDE

The new generation of cooling lubricants

Chip-removal-based machining processes place extraordinarily high demands on man and machine. Finding the right balance between optimal workpiece processing and the health of the operators has always been a challenge. But now, AQUASLIDE has come up with an efficient solution.

This Austrian development is more than just an entirely novel cooling lubricant, it is an all-round concept that revolutionises and simplifies the handling requirements for cooling lubricants in the metalworking industry. The convincing advantages of this novel product include exemption from warning label requirements, great skin tolerability and simple fluid management.

AQUASLIDE is based on decades of know-how in the development and production of lubricants, and numerous companies relying on it put it to the acid test every day.

AQUASLIDE

Cool technology supporting occupational health

AQUASLIDE is a water-based cooling lubricant. It is completely exempt from warning label requirements. The sophisticated additive technology makes it a health-friendly, sustainable and technically advantageous alternative to conventional cooling lubricants. Its unique formulation translates into top-class technical performance. At the same time, AQUASLIDE is extraordinarily kind to the skin.

Thus, AQUASLIDE is fully in tune with the increasing awareness of the need of companies to protect the health of their employees, while simultaneously offering the corresponding solution.

» *The basis of AQUASLIDE is water and, if any contact with the body occurs, it will behave like water. This completely eliminates lost time at work as a result of severe irritations of the skin or lungs. Workplaces are cleaner, and the working environment is better.* «

AQUASLIDE

A single product for all applications

When AQUASLIDE was developed, the objective had been to have just one product for all machining types and for all materials. AQUASLIDE | ONE is used for the initial filling of machines, AQUASLIDE | ONE REFILL for topping up consumed liquid. Both products are supplied as a concentrate.

This eliminates the costs and logistics of having to stock a range of products suitable for differing materials and machining operations.

AQUASLIDE introduces an entirely new application concept.

*Combining simple changeover with long life
and simple fluid management, AQUASLIDE
optimises the entire workflow.*

AQUASLIDE

Innovation, know-how and experience

Technical advantages

- ◆ Optimal cooling properties
- ◆ Excellent results with all machining types
- ◆ Simple mixing and storage
- ◆ Simple fluid management
- ◆ Clean machines
- ◆ High biostability
- ◆ Greaseless surfaces

Advantages at the workplace

- ◆ Pleasant working environment
- ◆ Clean workplaces
- ◆ Good visibility of the machined parts due to clear machine windows
- ◆ Formation of oil mist eliminated
- ◆ Excellent skin tolerability
- ◆ Minimised risk of injury through oil-free formulation

The outstanding features of AQUASLIDE include extremely user and health-friendly components without compromising technical performance, ease of facility maintenance, disposal or safety at work.
