

OCS offers smart internal transport systems

An effective production system with short throughput times is a vital condition for every company wanting to be competitive. From the raw material storage, through the production and all the way up to delivery, the system must combine efficiency and total flexibility with absolute reliability. We present adaptable solutions that will be suited for your type of production and that can be hanging-, roll-, chain-, and/or belt conveyors.

OCS handles everything from design, projecting to start up. We have special competence in assembly lines, order picking, customer order based production, sorting, storing, buffer and distribution processes.

Experience and creativity

OCS is a company with over 40 years of experience and creative staff who knows everything that is worth knowing about internal transport systems. That makes you feel safe during the whole process – from analysis - to installation – and start up.

A combination of experience and new ideas takes us forward and guarantees that OCS will always be located in a leading position of the development. It means guaranteed high quality know-how together with one of the best transport systems available in the market.

One supplier is all it takes

OCS analyzes your business and presents to you a

well thought out suggestion with the best solution out of both a production as well as an economic perspective.

Productivity, Just-In-Time, World Class Manufacturing, profitability - with OCS as a supplier you get the smartest solution by using only one partner.

Global presence

Our head office is located in Borås, Sweden and we have a sales office in Löhne, Germany. We also have partners in Europe, USA, Canada, Mexico, China and Japan. OCS has more than 300 systems installed in more than 35 countries and 5 continents.

OCS smart solutions

Products and components

OCS offers a wide selection of hanging and floor transporters for various businesses and processes. The systems contain different functions such as buffers, work stations, switches and curves. Adaptations are made out of each individual need.

Modular built up standard components allow easy and rapid changes in the further development of the production process.

Each need and product is unique and the product carrier is adapted to most kinds of cargo. We will find a tailor-made, optimal solution to fit your production and premises. This is what we mean by saying

...your need – our know-how

Business concept

By supplying smart internal transport systems OCS will contribute to their customers' business success.

Quality

OCS is using a quality control system according to ISO 9001 standard. To OCS the highest possible quality is the same thing as satisfied customers. This requires the whole OCS business to be of highest quality - such as our own logistical system, sales contact, implementation, documentation and service.

Training

In relation to the system installation a training of your personnel is planned. At the same time as the training takes place, a documentation folder is handed over which contains user manual, maintenance manual, fault localization and drawings.

After sale and technical support

A system's life expectancy and function is much determined by service and maintenance. Preventive maintenance minimizes the risk of interruption in the daily pro-

duction. Critical spare parts should always be kept near at hand in case of a failure. When making the contract briefing we therefore always present a suggestion for a spare part package.
