New Ex products from Ensto and Emerson at OTD 2016

Ensto is a local Nordic player with extensive experience in designing and manufacturing certified ATEX and demanding industrial solutions for both the Nordics and global markets.

Ensto and Emerson have joined forces and signed a cooperation agreement, which brings benefits to Nordic customers in many ways. Customers in the region now have a reliable and local Nordic partner offering an extensive range of products and solutions for hazardous environments.

The product range includes control stations, enclosures, panelboards, plugs and receptacles, as well as LED lighting, fittings and heat tracing systems.

"We look forward to working with Emerson in offering our customers an even broader range of electrical components and equipment for hazardous areas and presenting them at the OTD 2016 exhibition in Bergen", says Ensto's Sales Manager Knut Mjølhus.

You are welcome to meet our experts at our stand **B3094**.
