

INTRODUCING
GREEN CONCEPT G-SERIES

The very first non-phthalate fender

INTRODUCING
GREEN CONCEPT G-SERIES

The very first non-phthalate fender

Made with use of non-phthalate plasticizer for PVC.

The G-series contains up to 30% recycled material. Defect products are reprocessed, making sure nothing goes to waste.

Shipped with 100% recyclable packaging.

Green Concept products
are marked with the
iconic green valve.

Green Concept

As part of our environmental focus we now present the Green Concept. Our Green Concept products are produced with **the same quality** as all Polyform's products are known for, in addition to leaving an **improved environmental footprint**.

Some of our Green Concept measures:

- All of our products are produced, tested and approved at our factory in Norway.
- We only use approved raw materials and all our plastic is produced in-house.
- External surfaces are produced to release a minimum of microplastics and UV resistant plastic counteracts photodegradation.
- Our material recovery program ensures that scraps and defective products are recycled, reused by partners in other processes or sent to energy recovery. Nothing goes to waste.
- Polyform complies with national and international environmental requirements, and is an ISO 14001-15 certified producer.
