Lenticular Stack Filter

Stack filter - 7-16 cells

Stack Filter Cartridges are a new type of filter cartridge using depth filter sheets. It is designed using a double separator concept. The Separator design increases the total stability of the filter cartridges as the separators fully support the sheet material. The design also prevents filter sheet deformities after heat treatments and adverse effects of contact with hot sanitation. It is manufactured with rigid external clips to prevent damaging filter sheets during mobile loading and unloading while allowing for easy and reliable handling.
