

PLEATED FILTER POLYPROPYLENE

Ultra-Pleat PP-K

Ultra-Pleat PP-K is specially suited for filtration of broad particle mix. The wider pleating of the filter media ensures that the filter will block.

The combination of up to eight separate filtration layers provides true depth filtration, within a pleated cartridge construction, and resistance to fouling.

The Ultra-Pleat PP-K are also highly resistant to integrity failure caused by steam sterilisation and have excellent chemical compatibility characteristics.

Technical Data

	Polypropylene
	0,5 1 2 3 5 10 15 20 30 40
