#### Water cooling: L type

Back

Ordering No.: HS-684

#### ■ Features

- 3  $\psi$  3-wire without Neutral / 340~530VAC wide input range
- · High efficiency up to 97%
- · Water / forced air cooling selectable
- Built-in CANBus/Optional PMBus/MODBus-RTU/RS-485 protocol
- · Output voltage and constant current level programmable
- Active current sharing up to 4 units(40KW)
- · Built-in remote ON-OFF control / Auxilary power / Alarm signal
- Protections: Short circuit / Overload / Over voltage / Over temperature / Fan fail
- 5 years warranty

## ■ Applications

- Energy & power system for automation
- U.V or laser diode application
- Electrolysis system
- · Laser processing machine
- Burn-in facility
- · RF application
- EV charging station

## Description

SHP-10K is a 10KW  $3\,\phi$  3W input AC/DC power supply. This series operates for the wide range three phase AC input (3 phase 3 wire /  $340\sim530$ VAC) neutral is not needed, and offers the models with DC outputs (55V/115V/230V/380V) that mostly demanded by various industries. Two types of cooling methods, forced air and water cooling, that can be working at ambient temperature up to  $70^{\circ}$ C. Moreover, SHP-10K provides vast design flexibility by equipping various built-in functions such as output programming, active current sharing, remote ON-OFF control, auxiliary power, and communication protocols, that will not only satisfy marker demand, but also enhance automation purpose.

#### NOTE

- 1. All parameters NOT specially mentioned are measured at 400VAC input, rated load and 25°C of ambient temperature.
  2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor.
- 3. Tolerance :includes set up tolerance, line regulation and load regulation.
- Derating may be needed under low input voltages. Please check the derating curve for more details.
   Additional EMI filter is needed to meet regulations of EMC conducted and radiated emission. Characteristics of EMI filter please refer to the table, Minimum
- 6. The efficiency is measured at 480VAC input.
- 7. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 600mm\*900mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on http://www.meanwell.com)

  8. The ambient temperature derating of 3.5°C/1000m with fanless models and of 5°C/1000m with fan models for operating altitude higher than 2000m(6500ft).
- 9. If use PV signal to adjust Vo, under certain operations conditions, ripple noise of Vo might slightly go over rating defined in this specification. 10.Under light load condition, output voltage ripple will exceed specification. The behavior can be minimized by increasing the load.
- ※ Product Liability Disclaimer: For detailed information, please refer to https://www.meanwell.com/serviceDisclaimer.aspx

## ■ Function Manual 1.Output Voltage Programming (or, PV / remote voltage programming / remote adjust / margin programming / dynamic voltage trim) (1)Default by potentiometer (SVR) (a) Have the DIP switch position-3 set as (b)Output voltage can be trimmed by SVR. (2)By Output Voltage Programming (a) Have the DIP switch position-3 set as OFF (b) The output voltage can be trimmed to 50~120% by applying EXTERNAL VOLTAGE between PV+ and PV- on CN53. B DIP SW1 (Fine adjustments) (Main Adjustments) -V PIN1,2-V(Signal) LOAD EXTERNAL VOLTAGE (DC)(0~5V) Fig 1.1 Vout 100 120 114.5 OUTPUT VOLTAGE(%) 113.7 106.5 70 230V(Default) 100 **OUTPUT CURRENT (%)** L type Blank type 40 20 43.2 57.6 4 4.37 4.41 4.7 4.8 103.5 115 115V **EXTERNAL VOLTAGE (DC)** 194.4 216 260 230V 334 © The 100% output voltage is 48/115/216/334V. **OUTPUT VOLTAGE** © The rated current should change with the Output Voltage Programming accordingly. Fig 1.2

#### 2. Constant Current Programming (or, PC / remote current programming / dynamic current trim)

- (1)Default Overload Protection(OLP) value
  - (a) Have the DIP switch position-2 set as
  - (b)Output current is set default value.
- (2)By Constant Current Level Programming
  (a)Have the DIP switch position-2 set as
  (b)
  - (b)The constant current level can be trimmed to 20~100% of the rated current by applying EXTERNAL VOLTAGE between PC+ and PC- on CN53.

Will Under PC function at wattage < 4KW, the power supply might enter burst mode and cause output unstable, please increase the load to minimized the effect.

X Auto de-rating function covered by over temperature protection, it works either in PC mode or under control by communication protocol.

T<sub>1</sub>(Typ.): Maximum ambient temperature of full load.

T<sub>2</sub>(Typ.): T1+5°ℂ.

Fig 2.2

## 3.DA, DB signal and parallel control function

- (1)Non-parallel operation
  (a)set the DIP switch of postion-1 as
- (b)By default, non-parallel operation.
  (2)Default parallel operation
  (a)set the DIP switch of postion-1 as

(b)PSUs are configured in parallel operation.

Fig 3.1

#### 4.Remote ON-OFF Control

\* The power supply can be turned ON-OFF by using the "Remote ON-OFF" function.

Between Remote ON-OFF(CN86 pin1) and 5V-AUX(CN86 pin2)	Output Status
Switch close (Short)	power supply ON
Switch open (Open)	power supply OFF

Table 4.1

File Name:SHP-10K-SPEC 2022-07-27

## 5.Alarm Signal Output

💥 There are 4 alarm signals, DC-OK, T-ALARM, Fan Fail and AC-OK, in TTL signal form, on CN86. These signals are isolated from output.

# SHP-10K series

#### 6.Current Sharing

SHP-10K has the built-in active current sharing function and can be connected in parallel, up to 4 units, to provide higher output power as exhibited below:

- % The power supplies should be paralleled using short and large diameter wiring and then connected to the load.
- 💥 In parallel connection, power supply with the highest output Voltage will be the master unit and its Vout will be the DC bus voltage.
- \*\* The total output current must not exceed the value determined by the following equation: Maximum output current at parallel operation=(Rated current per unit) × (Number of unit) × 0.95
- ※ When the total output current is less than 5% of the total rated current, or say (5% of Rated current per unit) 

  × (Number of unit) 

  the current shared among units may not be balanced.
- X Under parallel operation ripple of the output voltage may be higher than the SPEC at light load condition. It will go back to normal ripple level once the output load is more than 5%.

#### ※ CN53/SW1 Function pin connection

Parallel	PS	iU1	PSU2		PSU3		PSU4	
i araner	CN53	SW1 PIN1						
1 unit	Х	ON	_	_	_	_	_	_
2 unit	V	ON	V	ON	_	_	_	_
3 unit	V	ON	V	OFF	V	ON	_	_
4 unit	V	ON	V	OFF	V	OFF	V	ON

(V: CN53 connected; X: CN53 not connected.)

 $\bigcirc$  DA,DB are connected mutually in parallel.

Pin No.	Function	Description
1,2	1,2 -V(Signal) Negative output voltage signal. It is for local sense and certain function reference; it cannot be connected directly to the lo	
3,4	PV+	Connection for output voltage programming. (Note)
5,6	PC+	Connection for constant current level programming. (Note)
7,8	DB	Differential digital signal for parallel control. (Note)
9,10	DA	Differential digital signal for parallel control. (Note)

Note: Non-isolated signal, referenced to [-V(Signal)].

※ Control Pin No. Assignment (CN86): HRS DF11-18DP-2DS or equivalent

Mating Housing	HRS DF11-18DS or equivalent
Terminal	HRS DF11-**SC or equivalent

Pin No.	Function	Description
1	Remote	The unit can turn the output ON/OFF by dry contact between Remote ON/OFF and +5-AUX.(Note)
ı	ON-OFF	Short (4.5 ~ 5.5V): Power ON; Open(0 ~ 0.5V): Power OFF; The maximum input voltage is 5.5V
2	+5V-AUX	Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 4,6,8,10,17,18) only for Remote ON/OFF used. This output is not
2	+3V-AUX	controlled by the Remote ON/OFF control.
		High $(3.5 \sim 5.5 \text{V})$ : When the internal temperature exceeds the limit of temperature alarm.
3	T-ALARM	Low (-0.5 $\sim$ 0.5V) : When the internal temperature is normal.
		The maximum sourcing current is 10mA and only for output.(Note)
4,6,8,10	GND-AUX	Auxiliary voltage output GND.
4,0,0,10	GND-AUX	The signal return is isolated from the output terminals (+V & -V).
		High(3.5~5.5V):When the fan fail.
5	Fan Fail	Low(-0.5~0.5V): When the fan works normally.
		The maximum sourcing current is 10mA and only for output.(Note)
		High(3.5 ~ 5.5V): When Vout≤80% $\pm$ 6%.
7	DC-OK	$Low(-0.5 \sim 0.5V)$ : When $Vout \ge 80\% \pm 6\%$ .
		The maximum sourcing current is 10mA and only for output.(Note)
		High (3.5 ~ 5.5V): When AC input $\geq$ 335 $\pm$ 1.5% Vac, PSU works normally.
9	AC-OK	Low (-0.5 ~ 0.5V): When AC input $\leq$ 320 $\pm$ 1.5% Vac, PSU shut down.
		The maximum sourcing current is 10mA and only for output.(Note)
	001/04411/	For PMBus model: Serial Clock used in the PMBus interface.(Note)
11,12	SCL/CANL/ DATA-	For CANBus model: Data line used in CANBus interface.(Note)
	DAIA-	For MODBus model: Data line used in MODBus interface.(Note)
	0.0.4.0.4.4.4.4	For PMBus model: Serial Data used in the PMBus interface.(Note)
13,14	SDA/CANH/ DATA+	For CANBus model: Data line used in CANBus interface.(Note)
	D/(I/(	For MODBus model: Data line used in MODBus interface.(Note)
15,16	+12V-AUX	Auxiliary voltage output, 11.4~12.6V, referenced to GND-AUX (pin17 & 18).
10,10	· 12 V-AUA	The maximum load current is 1A. This output is not controlled by "Remote ON-OFF".
17,18	GND-AUX	Auxiliary voltage output GND.
17,10	GND-AUX	The signal return is isolated from the output terminals(+V & -V).

Note: Isolated signal, referenced to (GND-AUX).

#### **%LED Status Indicators**

LED	Description	
Green(LED1)	LED on when output voltage is OK	
Red(LED2)	LED on when any protection occurs	

#### XAC Input Terminal Pin No. Assignment (TB1)

Pin No.	Assignment	Diagram		Maximum mounting torque
1	FG ±			
2	AC/L1	اواواواوا	أطاطاطا	18Kgf-cm
3	AC/L2			Tokyi-ciii
4	AC/L3
