System requirements

Hardware

- CPU X86-compatible processor from 1 GHz; fast single core performance is preferred against very many cores
- Memory minimum of 2 GB; 4 GB recommended (DASYLab is still a 32-bit application)
- Disk Space 1 GB free space, of which at least 500 MB is on the system partition
- Video/Graphic card color depth at least 24 or 32 bits (True Color)
- Screen resolution at least 1024 × 768; full HD (1920 × 1080) and better recommended, multiple external monitors supported

Operating systems

- Windows 10, 32-bit Windows 10, 64-bit (as a 32-bit application)
- Windows 8.1, 32-bit
 Windows 8.1, 64-bit (as a 32-bit application)
- Windows 7, 32-bit
 Windows 7, 64-bit (as a 32-bit application)

Software

- Latest version of the MCC InstaCal driver/utility software
- Microsoft[®] .Net Framework 2.0 SP2 or later

Download and install InstaCal

Download InstaCal from <u>www.mccdaq.com/software.aspx</u> and install the software. You must be logged in as an administrator.

Connect your MCC device to a signal source

Connect the device so that it acquires signals from analog channel 0.

Refer to your hardware user's guide for instructions on installing and connecting the device to an analog signal source. MCC user's guides are available at <u>www.mccdaq.com/manuals.aspx</u>.

Launch InstaCal and add devices

Launch InstaCal from the Start menu. How you add devices depends on the type of bus interface.

Adding USB, Bluetooth, WEB, and PCI/PCIe devices

These device types are automatically detected by InstaCal.

Select the device(s) to add to InstaCal on the **Plug and Play Board Detection** dialog box and click **OK**.

Adding Ethernet devices

Complete the following steps to manually add Ethernet devices to InstaCal after they are connected to the computer or network.

1. Select Install » Add Board to open the Board Selection List.

- 2. Click on the tab corresponding to the type of device to install.
- 3. Select the device(s) and click Add.

Each added device is listed on the **PC Board List**.

Download and install DASYLab

DASYLab 2020 is available as a software download. When you purchase DASYLab, a serial number is emailed to you. This serial number is required to register DASYLab.

- **Note:** If you previously installed the DASYLab evaluation version, do not reinstall DASYLab. Open the Configurator 2020 program from the Start menu and enter the serial number provided in the email.
- 1. Go to <u>www.mccdaq.com/Software-Downloads.aspx#dasylab</u> and select **Download DASYLab** 2020.

The self-extracting installer file **DASYLAB2020.exe** is downloaded to your computer.

2. Run the DASYLAB2020.exe installer file.

The installer extracts the DASYLab installation files to your computer, and the **StartCD** program runs automatically.

- 3. Click on Install DASYLab 2020 to launch the English installer.
- 4. Click **Next** and follow the onscreen prompts to select the installation directory, accept the license agreements, and install the software.
- **5.** After the software is installed, the **Configurator** automatically opens for you to register the software or enable the evaluation version:
 - a. Enter your name, company, and serial number in the textboxes provided.
 - **b.** If you are *registering* DASYLab enter the **Serial number** provided in the email and click **Continue**.

If you are $evaluating \, \rm DASYLab,$ enable the Install evaluation version checkbox and click Continue.

Install the Measurement Computing Driver

Use the **Configurator** to install the MCC driver.

- 1. From the Packages tab expand the Data acquisition node.
- 2. Select Measurement Computing and then Enable.
- **3.** Click **Next.** On the **Options** tab, select the file extensions to associate with DASYLab and click **OK**.

Refer to the Options topic in the DASYLab Help Configurator section for more information.

- 4. Review the **Global Settings** tab to pre-configure DASYLab Options.
- 5. Click Finish.

Restart the computer when prompted and launch DASYLab.

Acquire, display, and write analog data

Complete the procedures in this section to acquire, display, and write data from a single analog channel with DASYLab. You can use either a physical MCC DAQ device or the DEMO-BOARD to perform the procedures.

Measurement Computing modules

Measurement Computing modules are available from the **MCC-DRV** folder in the **Inputs/Outputs** Module group.

Add an Analog Input module

Complete the following steps to add an MCC Analog Input module to the DASYLab worksheet:

1. From the MCC-DRV folder, drag an Analog Input module onto the worksheet.

DASYLab prompts you to choose a device from installed MCC hardware.

2. Select the device and analog channels to use and click OK.

3. Double-click on the Analog Input module to open its dialog box.

Leave channel 0 enabled and all other channels disabled; this is the default configuration.

- 4. In the Range area, enter -5 for the Lower limit and 5 for the Upper limit.
- 5. Click Measurement to open the Measurement Setup dialog box.
- 6. Click Modify to open the Modify Timebase dialog box.
- 7. Change the Scan rate to a rate supported by your device.
- Note: The maximum scan rate for the DEMO-BOARD is 100 Hz.
- 8. Click OK to close each dialog box and save your settings.

Add a Write Data module

Use the Write Data module to write the analog data to a file. Complete the following steps to add the Write Data module to the worksheet:

- 1. Expand the Files folder and drag a Write Data module onto the worksheet.
- 2. Connect a wire between the Analog Input module output pin and the Write Data module input pin.

Tip: Drag the modules together to make the connection:

Configure the data file

The Write Data module has numerous properties you can set that determine how the file is saved. To set up the data file using the **Write Data** dialog box, complete the following steps:

- 1. Double click on the Write Data module to open its dialog box.
- 2. Select ASCII (Excel CSV Preset) from the File format list box. Your data is saved in a *comma-separated values* (CSV) text file that you can open or import with Microsoft Excel®.
- 3. Click **Yes** in the **User Information** prompt to set the delimiter to **Comma** and the measurement time to seconds for CSV files.
- 4. Click File and specify a name and location to save the data, then click Save.
- 5. Click Options to open the Write Data: ASCII Format dialog box.
- 6. Select **Date+time** from the **Time format** list box to store the actual date and time for each row of samples.
- 7. Click **OK** to close each dialog box.

Add a Y/t Chart module

Use a display module such as the Y/t Chart to display the signals. Complete the following steps to add a Y/t Chart module to the worksheet:

- 1. Expand the **Display** folder and drag a Y/t Chart module onto the worksheet.
- 2. Click the wire connecting the Analog Input module and the Write Data module and drag it to the input of the Y/t Chart module.

The worksheet will look like this:

Run the worksheet

After setting up the operation, run the worksheet to acquire input data from the MCC DAQ device, display the data on a chart, and write the data to a file. To run the worksheet, complete the following steps:

- 1. Click **Start** ▶ on the DASYLab Function bar.
- **2.** Click on the **Restore all Windows** icon on the DASYLab Function bar to open the minimized Y/t Chart window.

The analog signal acquired from the MCC DAQ device is plotted on the **Y/t Chart00** display. An example is shown here.

3. Click **Stop** on the DASYLab Function bar to stop the program.

Use Excel to view the saved csv file. An example is shown here.
