

RECYCLINGDAGEN

October 22, 2025

Helsingborg Arena

The Future of Waste Management and Recycling

Challenges and opportunities for sustainable waste management in the future!

On October 22, it's time for "Recyclingdagen" conference in Helsingborg. There, we will highlight the challenges but also the opportunities that arise on the way to sustainable waste management and recycling.

The day offers a broad and extensive seminar program with inspiring lectures focusing on the industry's most relevant issues, including these subject areas:

Material recycling:

Here we take a look at the recycling of plastics (hard plastics and packaging as well as other plastics), textiles (high-quality textiles), electronics/batteries, metals, construction and demolition waste.

New technology/machinery/equipment:

We look at the latest sorting and recycling technology on the market.

Sustainable waste management and transport:

Garbage trucks, transport routes, containers and bins – the list of equipment for sustainable waste management is long.

Waste-related crime:

Examples of crime linked to waste management and recycling are unfortunately becoming more common. We look at what society, the business sector, and individuals can do to address this issue. The conference will be held in Swedish.
