

About us

We have more than 60 years of experience and expertise on the field. The tradition of metal casting - from precise preparation and planning, to producing the perfect mold and carefully prepare and execute the casting - has made us a qualified partner for many customers within the industry.

We have, during the last years, seen the need to be able to produce more complex items and we have therefore expanded our company with a 3D sand printer as the first in Denmark. Read more inside.

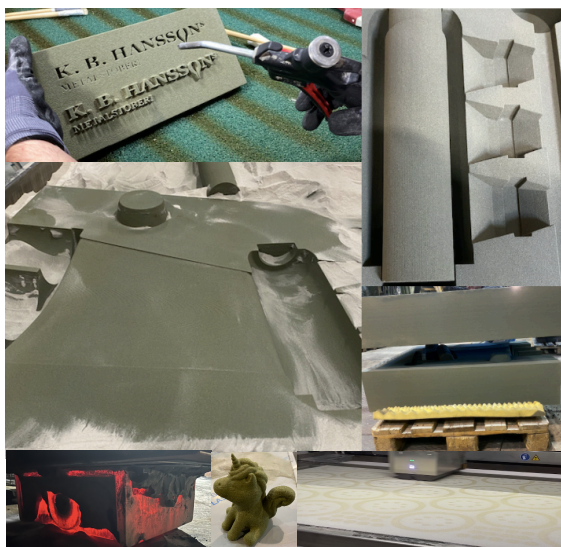

Overview

At K. B. Hansson's Metal foundry we make every size of items, small as well as large. Besides that we make both small and medium sized series.

At the same address as the foundry, we find Blære Seal Aps. Here it is possible to seal and impregnate leaky castings.

"We believe that you can make all kinds of metal castings." - Thomas Nielsen CEO

ExOne || S-Max pro

In 2020 K.B. Hansson's Foundry installed an ExOne S-Max Pro premium binder jetting system. We thereby began providing precision tooling without the long wait and high cost of traditional patterns and core box.

The machine works in furan sand, with a case size of 1800*1000*700 and a layer thickness of 0.28mm which makes the possibilities endless and the perfection great!

"We can now better meet requests for prototypes, more complex items, but also offer a time-saving process for our customers." - Thomas Nielsen CEO

As the first in Denmark with an in-house sand 3D printer, we are ready to print molds and cores whether you wish for us to cast it in-house, or whether you want to get it casted at another foundry.

The benefits of a 3D sand printer:

- Without the long wait.
- Drive down time and costs.
- Precision
- High quality & fine detail

So whether your next project involves casting in-house, or casting at another foundry, we are therefore ready to have a talk with you and to give you an offer without obligations.

Certificate

We possess the required certificates and thus are able to guarantee maximum safety to our customers. The technical facilities, high flexibility and international know-how are vital to us and accordingly certified. We are proud to be able to offer our customers the opportunity to receive classified quality castings with one of these five recognized stamps.
