8 reasons

to upgrade to

Automation Studio 6

from Automation Studio 4.12

Automation Studio

→

1

Projects are decoupled from the AS version, allowing seamless updates without conversion.

Automation Studio

2

Supports GCC 11.3, improving performance, supporting modern standards, and simplifying open-source software integration.

Automation
Studio

3

IEC 62443-4-1

Follows a certified security development process and includes enhanced OPC UA communication.

Automation Studio

4

Users can select AS, AR*, and mapp versions independently, allowing more flexible upgrade paths.

*Automation Runtime

Automation Studio

5

The editor is redesigned with better readability, variable-width contacts and coils, and improved power rail connections.

Automation
Studio

→

6

Follows semantic versioning for consistency.

Major.Minor.Patch.Build

Automation Studio

7

Supports OpenSSL 3.0.8 and TLS 1.3, enhancing security and performance.

Automation Studio

8

Follows the OPC 30001 PLC standard based on IEC 61131-3, improving compatibility and security.
