

# SCALE FILTER FOR MACHINES

3M ScaleGard Pro

## Technical Data

-  38°C
-  5" 10" 20" 30" 40"
-  Sanitary Quick Change
-   $\frac{3}{8}$ " BSPT or 10mm Push-in
-   

At Ultrafilter we conduct a range of cartridges from 3M developed specifically for café and restaurant industry. These cartridges filter particles from the water before coffee machines, soft drinks machines and ice machines.

The ScaleGard Pro range is a disposable scale control system designed to protect coffee and vending equipment from scale build up.

Designed to prevent hard scale formation in the heating coils that results in energy inefficiency, downtime and expensive service calls.

Most sizes are available in a bypass and non-bypass version. The bypass version lets 25% of pass around the filter so you keep some minerals in the water which can provide great taste.

We recommend the bypass versions for applications where the water quality is good, but you want to improve the quality of your coffee.

The no bypass version is recommended for applications where there are unwanted particles in the water.

Model	Capacity (liters)	25% Bypass	Flow Rate (l/min)	Applications			
				Coffee	Vending	Combi Ovens	Steamers
