HX Magnetic Transporter

HX magnetic transporters are the ideal tool for moving sharp parts, hot parts and parts that are difficult to grip safely and quickly.

The powerful ND magnet system can be activated and deactivated with a switching path of just 45°.

Ball-bearing mounted magnetic shafts and corrosion-protected surfaces ensure a long service life.

Depending on the application, you can choose between different handle variants and lengths.

A safety factor of 2.5 ensures sufficient reserves when using the HX magnetic transporter manually.

We recommend the HX for clearing cutting tables, pulling parts e.g. from the saw, positioning parts in welding fixtures, guiding workpieces on the crane, lifting parts out of boxes and for many other applications.

Standard T-Grip

Fist grip for quick turnover at body height

Extended handle for ergonomic picking from boxes or from the floor
