## Commercial Spray Equipment

**What is it:** Our Commercial Spray Systems utilize simple but specialized equipment to spray fiber with adhesive to a properly prepared surface which will remain exposed. The fiber must be sprayed in a smooth, uniform manner along with a sufficient supply of adhesive and air pressure to provide a lasting bond to the surface.

**What are the benefits?** Not only does commercial spray offer an effective thermal barrier where previous batt insulation types failed, but it also offers these benefits:

- Gives the building owner the option to save money on costly wall coverings. When the insulation is properly sprayed to a prepared surface with an adhesive, you should have no worry the insulation will detach from the walls or ceilings.
- Acting as a wall texture, it offers an aesthetically pleasing wall covering for your commercial building(s).
- Sound dampening is a major reason why building owners/installers recommend commercially sprayed insulation.

## Optimal Performance with ALL Fibers!

Rev. March 2016

# Equipment Needed:

Contact us for Ordering:  
**419-232-4871**

## Fiber Blowing Machine

All of our machines provide a precisely metered flow of fiber and generates the required velocity needed from the blowers to blow material in vertical and overhead applications.

## Multi-Jet 6.35cm Nozzle

An application component that allows for the ideal spray velocity and pattern of fibers and binding agents while utilizing 2, 4, 6, or 8 quick-change spray tips for custom fiber results.

**DON'T FORGET  
THE HOSES!**

## Pump: *Glue Compatible*

Capable of the required pressure (17.24 bar) to pump water, with or without adhesives, at the correct capacity (18.9 l.p.m.) and smoothness of spray pattern.

### MP-20

A favorite among the professional commercial spray contractors, it's desired for its ability to move a higher volume of glue and easy clean-up.

### MC-20

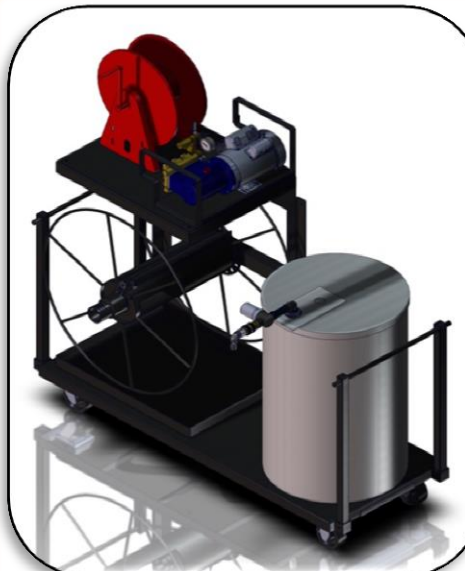

Popular with start-up contractors due to its lower cost, this unit is very portable and provides great versatility for use with an internal wetting system (IWS), water, and glue spray applications at lower pressures.

(See Pump Literature for more information)

## Glue Barrel Tanks

Our 170.3 liter 'nesting' barrels feature a contaminate blocking lid, an integrated hose network consisting of all the hoses your pump will need to perform optimally, and an inline filter to protect your spray equipment.

## The 'Cool' Cart

**Bring your equipment  
with you!**

With this nifty system, you can bring your Glue Barrel, Pressure Hose Reel, Fiber Hose Reel, and your Pump INTO the job site! At 66cm wide, it **fits through most common door openings** and is easily pushed or pulled on smooth rolling caster wheels. Whether you do Commercial Spray, Wall Spray, or just need a way to move some equipment, **the Cool Cart can easily be reconfigured to fit your needs!**
