

DEVELOPMENT AND DESIGN

GRUBER A/S HELPS CUSTOMERS TURN COMPLEX PRODUCTION CHALLENGES INTO PRACTICAL, RELIABLE TECHNICAL SOLUTIONS.

With more than 48 years of development experience, GRUBER combines customer insight, creativity and engineering know-how to develop solutions that work in real production.

Using 2D and 3D CAD/CAM, each design is reviewed with the customer and refined before detailed drawings are released.

Before production, GRUBER's engineers and toolmakers review the construction together to identify critical details early,

reduce risk and optimize the final solution. GRUBER supports development with CAD/CAM engineering in Inventor, and AutoCAD, including STEP, IGES and DXF import/export.

The result is an optimized, production-ready design that reduces mistakes, shortens lead time and provides reliable documentation.
