

GLOBAL TEAM - competences across borders

A Global Team can take on all or part of a task for the customer, who will gain access to specialized knowledge, transparency and above all a quick process between challenge and solution.

Competences across borders

A Global Team is close to you, the customer, and takes advantage of the right competences across national borders.

One customized team

Together with you, we define the need and the right setup – a customized team that matches the needs of the project will then run the project.

High professional standard

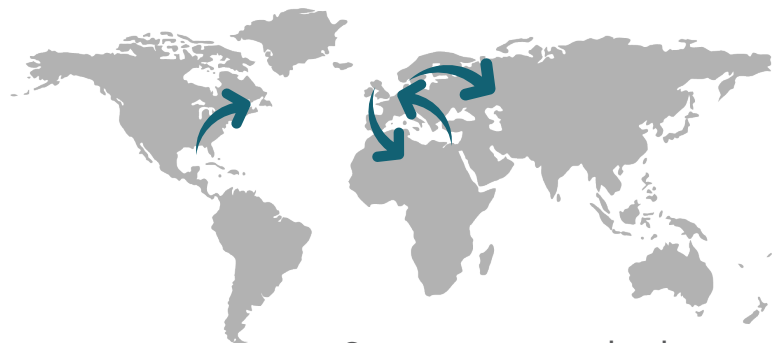

Our employees have a solid theoretical and practical background and are specialists in their respective fields. They are passionate about technology and are innovative and flexible and are among the best in their field.

Scalable cost vs. expertise

Global Team is a concept where you can scale your technology organization at a very competitive cost; or gain access to our highly sought-after experts.

Security and confidentiality

All data is processed and protected according to our ISO9001 certification. Our offices have project hotels with individually locked doors so that the customer may define who should have access to the rooms. We handle transport of IT equipment across borders.

Competences across borders

GLOBAL TEAM - competences across borders

A Global Team gives you...

Access to talented and specialized engineers

A validated business cooperation model

A highly scalable workforce

Competitive costs

A Global Team setup could look like this:
