

# KBN020

**“Wear resistance + fracture resistance” lowers costs  
when machining hardened material**

Combination of new coating technology and high content CBN provides  
Exceptional wear resistance and fracture resistance.

Supports a wide range of applications from continuous to heavily interrupted machining.

Newly developed "MEGACOAT TOUGH" coating technology.

**NEW** New coating is now available

New coated CBN for machining hardened material

# KBN020

Long tool life and stable machining results with wear resistance and fracture resistance.

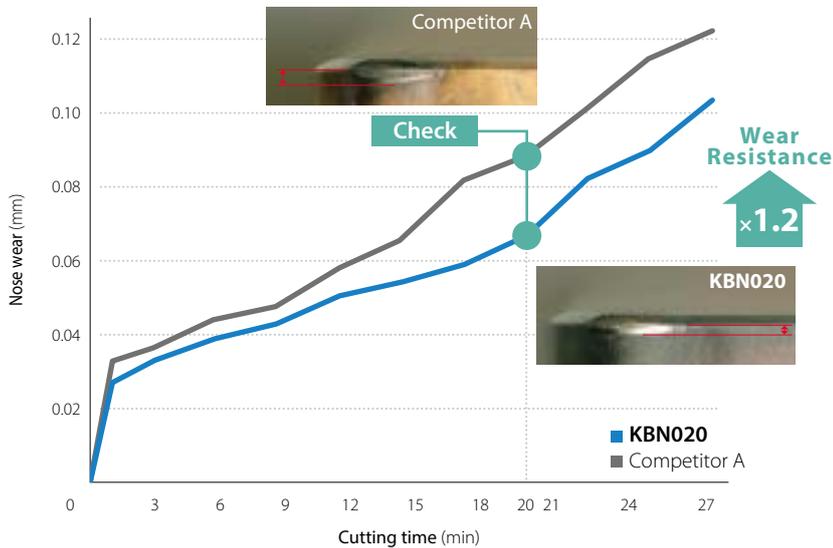

Supports a wide range of applications and reduces the cost of machining hardened materials.

**1** Combination of new coating technology and high content CBN provides exceptional wear resistance and fracture resistance

## Wear resistance

New coating "MEGACOAT TOUGH" suppresses layer peeling. Excellent wear resistance

Wear resistance comparison (in-house evaluation)

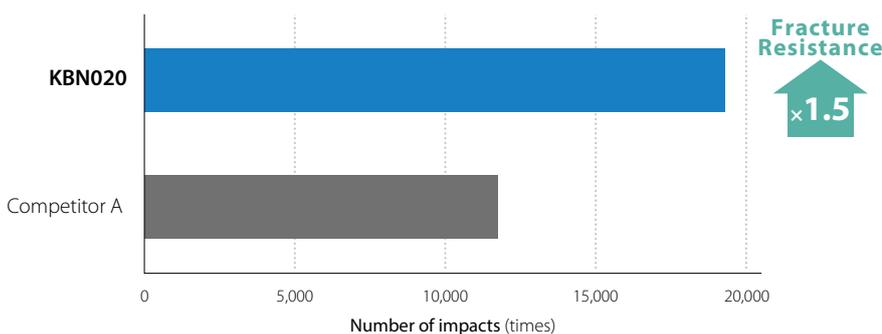

Cutting conditions : Vc = 150 m/min, ap = 0.2 mm, f = 0.1 mm/rev, Wet  
Workpiece : SCM415® 60 HRC

## Fracture resistance

High content CBN and high purity TiN binder improves strength of CBN. Excellent fracture resistance

Continuous to interrupted machining comparison (in-house evaluation)

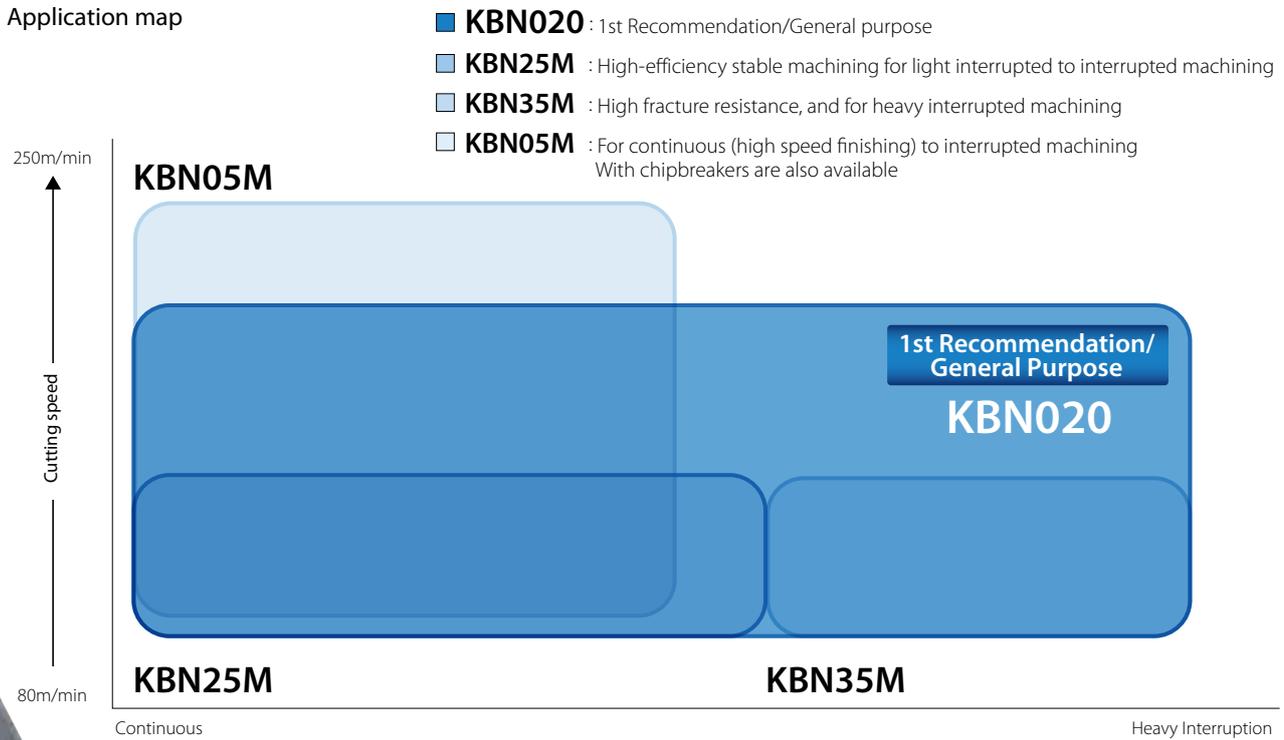

Cutting conditions : Vc = 150 m/min, ap = 0.2 mm, f = 0.2 mm/rev, Dry  
Workpiece : SCM415® 60 HRC

## 2 Supports a wide range of applications from continuous to heavily interrupted machining

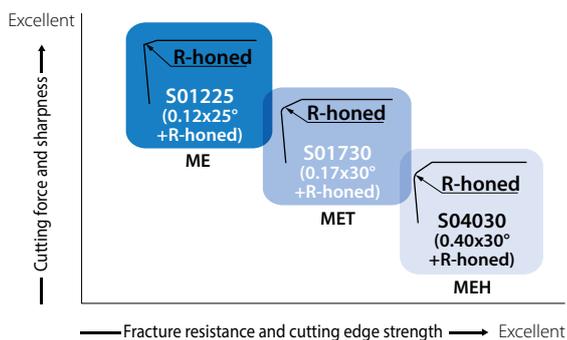

KBN020 covers a wide range of applications from continuous to interrupted machining of hardened material.

Application map

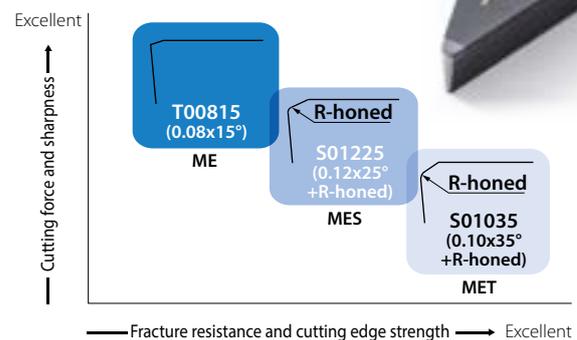

## 3 Extended lineup of cutting edge preparations for various applications and features

Negative insert

Positive insert

Negative insert standard cutting edge preparation (Hardened material machining)

Symbol	Cutting edge preparation		Applications and features
ME	S01225	0.12mm x 25° + R-honed	General purpose
MET	S01730	0.17mm x 30° + R-honed	Superior fracture resistance
MEH	S04030	0.40mm x 30° + R-honed	For interrupted · High-feed machining prevents flaking

Positive insert standard cutting edge preparation (Hardened material machining)

Symbol	Cutting edge preparation		Applications and features
ME	T00815	0.08mm x 15°	Chamfered sharp edge, minimize burrs
MES	S01225	0.12mm x 25° + R-honed	General purpose
MET	S01035	0.10mm x 35° + R-honed	For interruption stable machining

4

Newly developed coating "MEGACOAT TOUGH"

Features

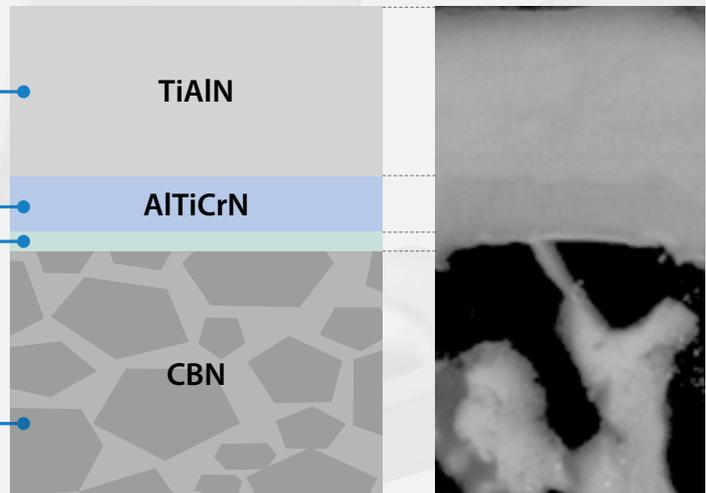

An adhesion layer is laminated between the high wear resistance layer and the CBN. Reduces layer peeling to achieve long tool life and stable machining.

High Wear Resistance Layer with TiAlN + Oxidation Resistance Components  
Suppresses oxidation/diffusional wear

Check New Technology

- Interlayer for stress relief
- High adhesion layer

- Two layers dedicated to CBN
- Improved adhesion between CBN and high wear resistant layer.
- Suppressed layer peeling
- High content CBN with high purity TiN binder
- Improved CBN strength

Layer image

Case studies

Clutch SCr420H

Vc = 100 m/min  
ap = 0.15 mm  
f = 0.10 mm/rev  
Wet  
WNGA080408S01225

Tool life

**KBN020** 650 pcs/edge ↑ x1.6

Competitor B 400 pcs/edge

KBN020 provides stable machining with longer tool life. (User evaluation)

Gear SCM415

Vc = 100 m/min  
ap = 0.05 mm  
f = 0.15 mm/rev  
Wet  
CNGA120408S01325MEW

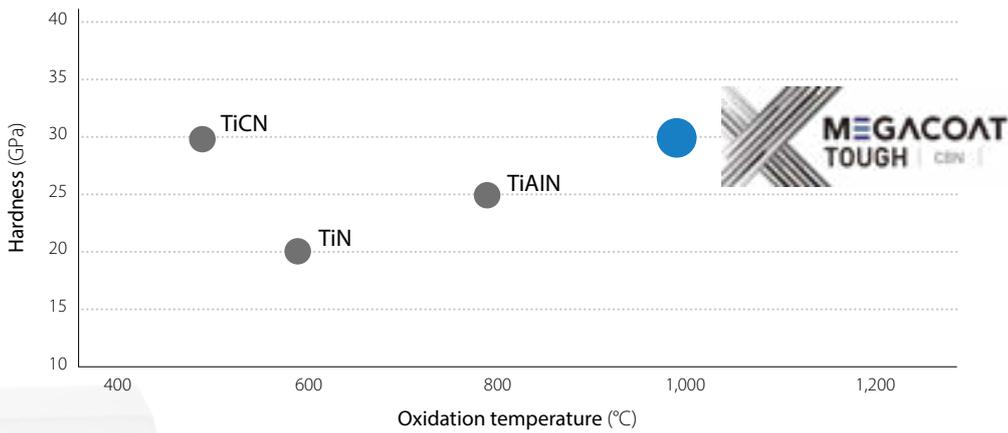

Tool life

**KBN020** 300 pcs/edge ↑ x1.5

Competitor C 200 pcs/edge

KBN020 improves dimensional variation with longer tool life. (User evaluation)

## Coating properties (In-house evaluation)

## Suppress layer peeling

**Check**

New technology  
Improved adhesion between CBN and high wear resistance layer

**KBN020**

**Competitor A**

Cutting conditions :  $V_c = 150$  m/min,  $a_p = 0.2$  mm,  $f = 0.2$  mm/rev, Dry Work Material : SCM 415® (In-house evaluation)

## Special video

### 1. Shaft - External turning

DDJNL2525M-1504  
DNGA150408S01225ME  
SCM415® 62HRC

$V_c = 120$  m/min,  $a_p = 0.2$  mm,  $f = 0.18$  mm/rev (Interruption  $f = 0.15$  mm/rev)

**Excellent stable machining in continuous to interrupted machining.**

### 2. Gear - Facing

DCLNL2525M-12  
CNGA120412S01225ME  
S45C® 58HRC

$V_c = 120$  m/min,  $a_p = 0.4$  mm,  $f = 0.15$  mm/rev

**Stable machining in heavy interrupted machining.**

# Solution for automotive parts

## Solution 1

Available for continuous to interrupted/heavy interrupted machining.  
Can be used on a variety of part shapes such as machining shafts and gears.

### Point

Excellent machining performance of auto suspension parts that use a lot of hardened materials.

## Solution 2

Long tool life and stable machining.  
High toughness suppresses sudden fractures during continuous to interrupted machining applications.

### Point

Stable machining increases productivity.
