# Call for Parts or Service - Productivity Kit

Communicating status—to identify and resolve machine, work cell, quality, or inventory issues—can be solved with simple setup and no changes to infrastructure. Empower operators, alert supervisors, and accelerate problem resolution with a simple touch for clear indication; you'll improve process efficiency upfront and aggregate data for greater insight. Contact your Banner Engineering representative for more details and other proven ways to streamline and simplify.

When you need parts or help, press the button

- Button is wireless and provides clear indication
- Installs easily

Supervisor is alerted to the request and can dispatch someone to help

- Alerts visualized with a battery-powered wireless display
- Analytics may be viewed from a web dashboard
- Many options exist to create other types of alerts for supervisors

Help arrives without the operator ever leaving their workstation

- Improve productivity and reduce idle-time
- Streamline your process to call for and dispatch help
- Gather meaningful data on who needs what and when
- Use data to drive continuous improvement efforts
