MOTOMAN MPX3500

Painting with the MPX3500

The fast and flexible MOTOMAN MPX3500 offers high performance in painting automobile bodies, bumpers, construction equipment and further more.

A high-density layout saves space by reducing the size of the painting booth. The L axis is designed with no offset to enabled installation of the manipulator closer to a work piece, which saves space. The time required for teaching large cells can be shortened by converting the data created for the robot on one side for the robot on the opposite side.

The hoses and tubes of the MOTOMAN MPX3500 can be routed inside the wrist section to prevent interferences. The process arm and high payload of this robot allows the mounting of large bell applicators, which enable multi-color painting.

The MOTOMAN MPX3500 is controlled by the high-performance MOTOMAN DX200 controller, which is available with the optional FunctApional Safety Unit (FSU) that offers a wide range of new safety functions.

KEY BENEFITS

- Flexible, fast and versatile
- Compact design
- Large motion range: Front area 2700 mm; wall mounted 3500 mm
- High Payload of wrist: 15 kg
- Process arm with enough space for potential separator and process technology
- Easy programming and installation
- Great availability

Controlled by
DX200
