The OPTIDRIVE Compact 2 is offered in both Basic and Advanced variants.

The main differences between the models is I/O including STO and the parameter set. Both models can be tailored to OEM requirements dependent on the application and the quantities of drive required for the project.

The parameters used in the Basic version are suitable for simple applications such as fans, pumps and conveyors.

The parameters used in the Advanced version are more suitable for advanced machine control applications.

When space is of a premium then the Inverterk Compact 2 is the solution.
