

The Miko Anchor Magnets form a series of powerful and robust underwater fixing points. With holding forces ranging from 90 kg to 2 000 kg, these magnets are used worldwide for a wide range of applications.

The magnetic component of MAM-003S is encapsulated in a stainless steel housing to further improve its corrosion resistance and durability for long periods of sea water exposure.

MAM-003S has a holding force of 500 kg* and can be used for fastening and securing tools and equipment to ship sides and other steel structures for a longer period of time.

The magnet is equipped with a mooring lug and breaking lever for easy release and safe operation. The bottom is fitted with a rubber filling for increased friction and improved usability.

All Miko magnets are shipped in a double-skin steel box to isolate the magnetic field and to prepare them for air freight.

MAM-003S is also available in a weatherproof plastic case with in-built magnetic shielding.

Case is optional
