

The image shows a close-up, low-angle view of several large, rectangular panels made of perforated metal. The panels are arranged in a grid-like pattern, with some panels slightly offset from others, creating a sense of depth and architectural complexity. The lighting is soft and even, highlighting the texture of the perforations. The overall color palette is a mix of light and dark greys, with some blueish tones in the background.

Artistic vision brought to life with perforated sheets

Expressive wall decorations made with perforated metal panels from RMIG combine functionality and aesthetics at an indoor swimming facility.

THE FACTS BEHIND AN ARTISTIC “WAVE”

Beautifully sculptured perforated panels from RMIG help create a welcoming and functional environment for the users of Hundvåg swimming facilities.

Raw material: Aluminium 5754

Pattern: R6T9

Thickness: 2.0 mm

Surface treatments: Anodising and powder coating

Perforated area: 510 m²

Artists: Marius Dahl and Jan Christensen

To increase the functionality of the swimming facilities in Hundvåg, it was decided to give the interior an artistic dimension that would counterbalance the hard surfaces and improve the acoustics by reducing noise levels. Artists Marius Dahl and Jan Christensen won the competition for this assignment with a beautiful project, inspired by water and waves.

Dahl and Christensen suggested a sophisticated wave pattern to reflect the use of the facilities. RMIG worked closely with the artists and Stålteknikk AS to find the perfect solution for this project. To bring the artists' vision to life, tailor-made perforated panels and cassettes from the RMIG City Emotion programme were used on the walls, creating a striking 3-D effect.

Functional aesthetics

All panels for the Hundvåg project were manufactured from 5754 aluminium, perforated with round holes and finished with a special surface treatment for maximum corrosion protection. Sound absorbing batts have been placed behind the panels to ensure maximum noise reduction. Furthermore, the perforated cassettes have been delivered as complete units, ready for installation, saving valuable time for everyone involved in this prestigious project. It is functionality and aesthetics on a new level.

More than just buildings

RMIG City Emotion is for everyone who values the beautiful and innovative qualities of our cities, because a city is not just about buildings. A city is a place for emotion and it requires our full attention to unleash its aesthetic appeal.

RMIG City Emotion captures the passion for creative urban design by offering innovative technologies and materials. We can help you realise the most ambitious architectural projects and their emotional potential.

- Let us guide you through the benefits and practicality of your design
- We can work on your drawings in CAD, 2D and 3D formats
- Use perforated sheets, embossed sheets or expanded metal
- Enjoy the unique finishing operations and surface treatments

RMIG is the world's largest manufacturer and supplier of perforated metal. In addition to exterior cladding, the company also supplies products for a large number of construction applications such as car park and security screening, acoustic wall linings, ceilings, lighting, street furniture, balustrades and walkways.
