

BIG news at PAKMA

We are proud to present our latest machine-investment.

Installation of the machine is set to end May 2013.

The machine is a *Mazak Variaxis i 700* with *Matrix 2* control, this is the biggest Variaxis machine-center Mazak currently can deliver in Europe.

This is only the second machine of this type that Mazak Denmark is to deliver.

It is PAKMA's wish to expand with our costumers.

Due to the fact that the parts continues to become larger and more complex, we felt this it was time to invest in the future.

This investment will reduce our delivery-time on complex parts significantly.

The *Variaxis i 700* will be released to production as soon as all fixtures and tools are in place. This is planed for ultimo June.

It is expected that our costumers in graphical branch, process-industry and offshore will benefit from use of this machine.

The Variaxis is setup for full 5 axis simultaneous operation in both Mazatrol and ISO (EIA).

Data:

Work area: X630 Y1100 Z600
C360 A-120/+30

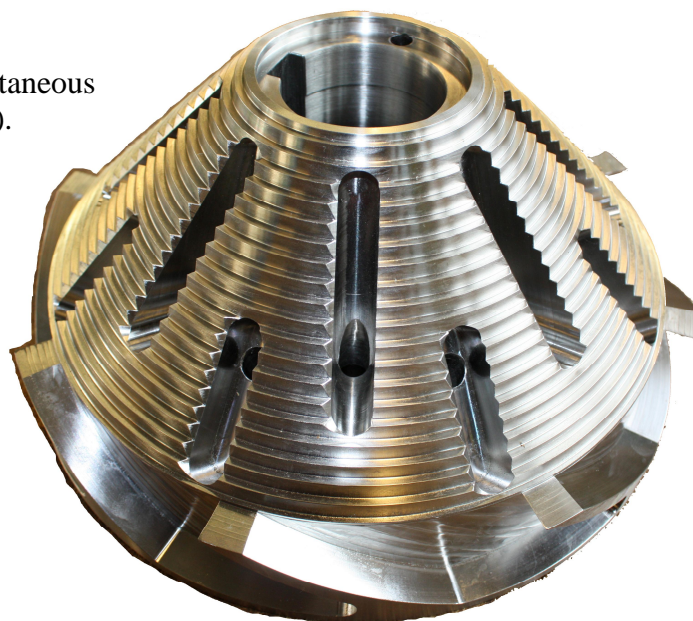

Table: 700x500 (ø850)

Table load: 700 kilo

Spindle: 12000 rpm. Big +

Tools: 80 pcs MAS40 with memory chip

Machine weight: >15.000 kilo.
