

Techno Vector 6

computer-based **3D** wheel aligners

FREE MOTION

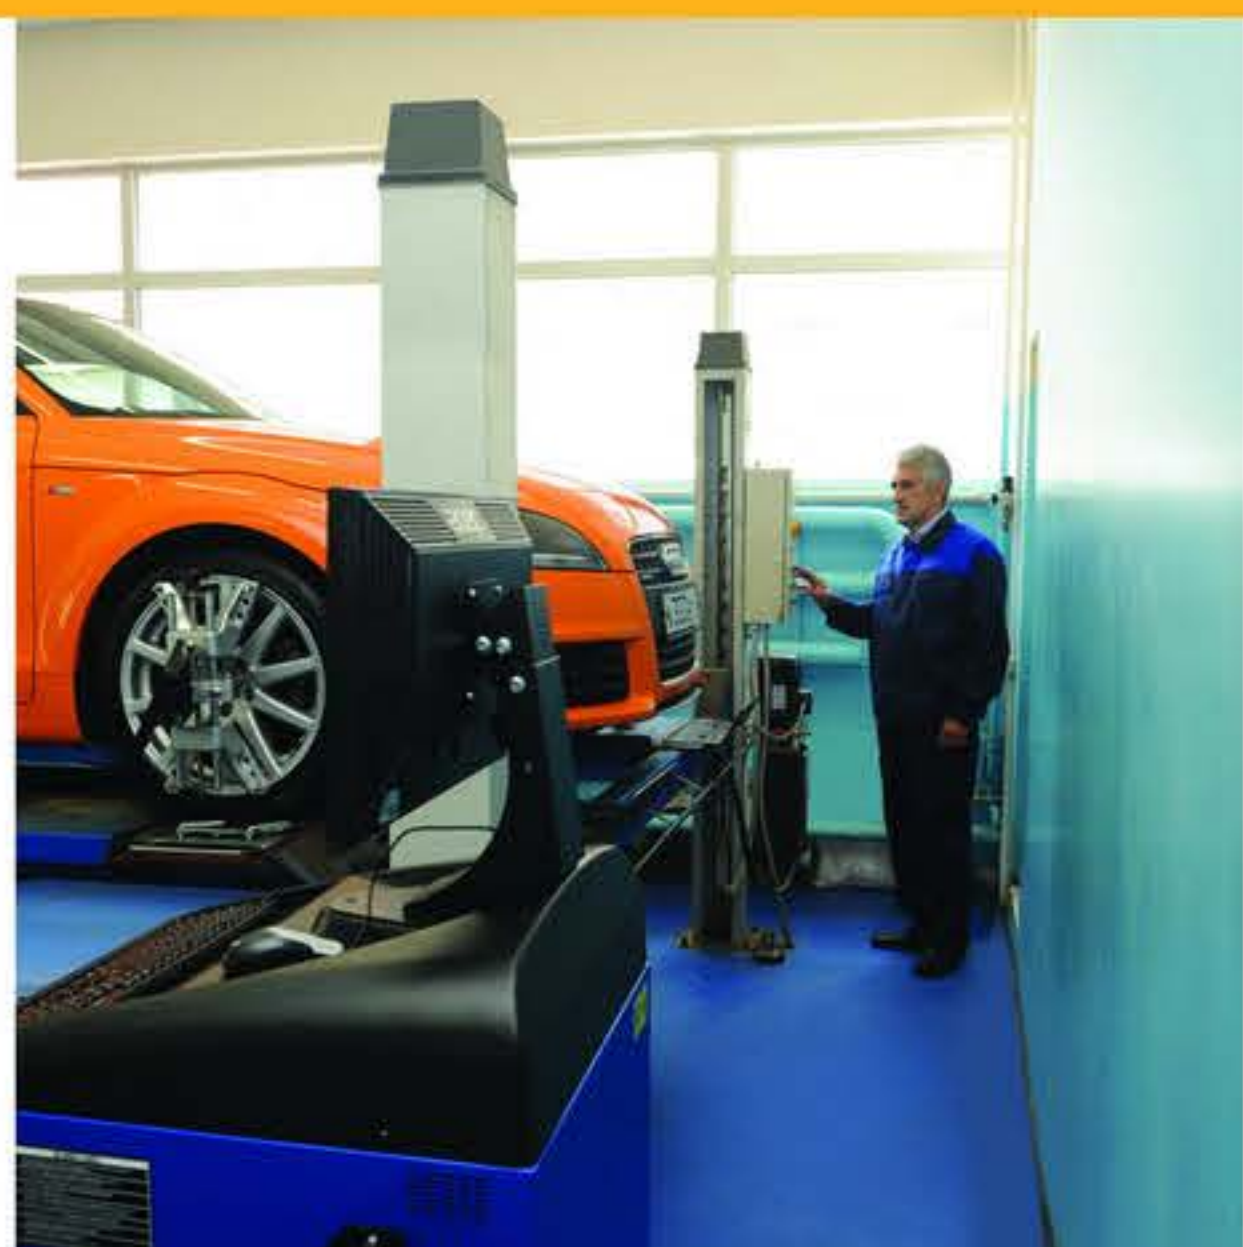

Precision in Motion

Computer-based wheel aligner with no limits!

- Installation even in space-limited environment (there are no limits on the distance between the lift and the front wall)
- No limits on the width between the lift posts
- Measurement and adjustment at any height of the lift
- Not attached to a certain workplace
- Requires no assembling

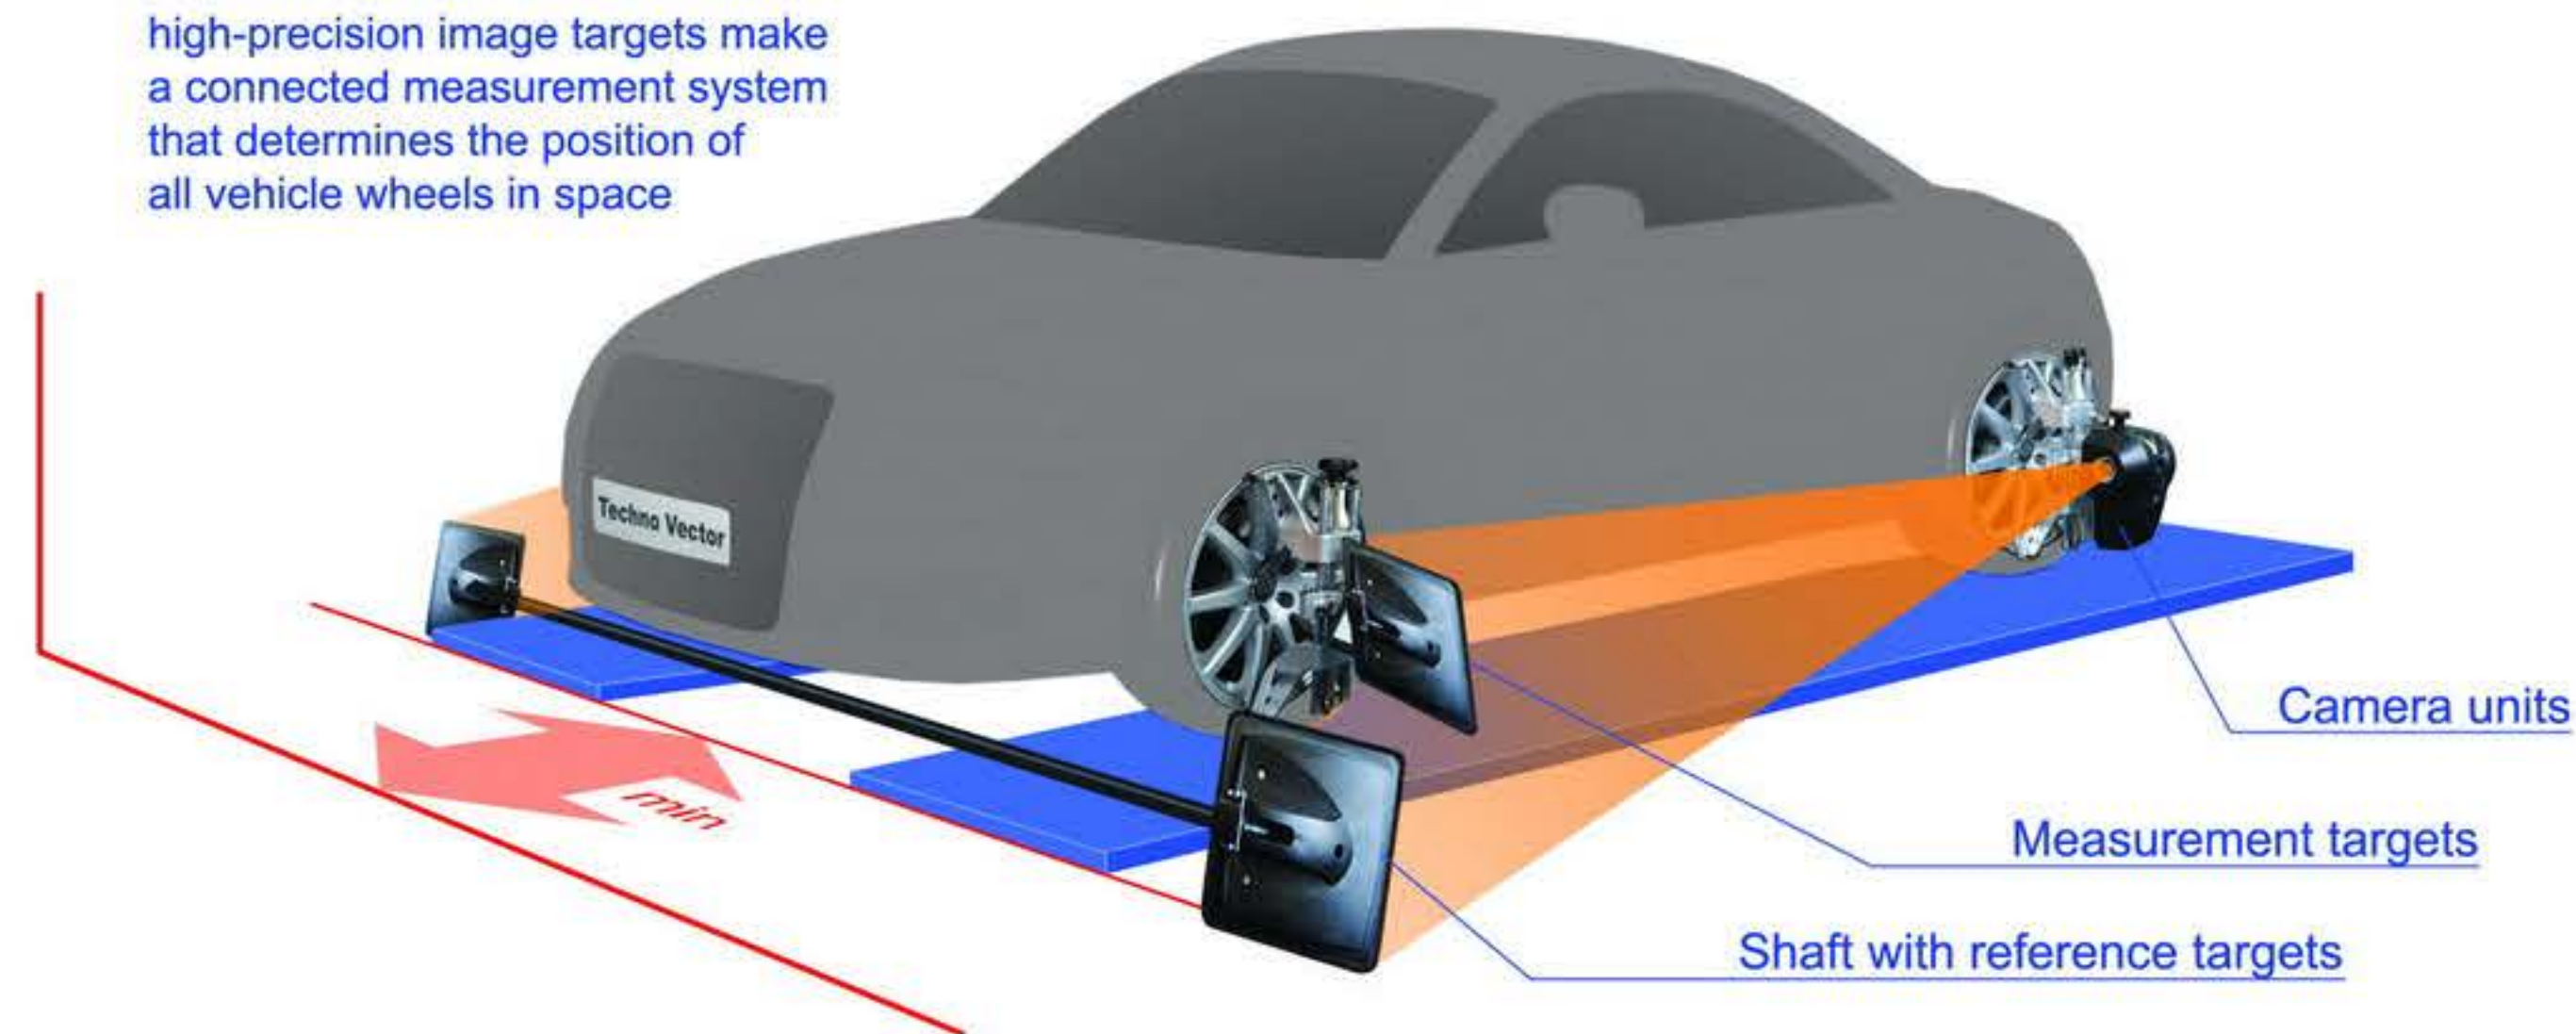

Techno Vector 6 is designed to check and perform wheel alignments on vehicles with 12 to 24" disks

3D visualization of measurement results

Two camera units, two measurement targets on front wheels and the shaft with high-precision image targets make a connected measurement system that determines the position of all vehicle wheels in space

FREE MOTION

High-definition video cameras provide a quick and reliable target "capture" and wireless data transfer to the PC over WiFi

Remote control

Rolling compensation
