POLYLUX®

Technology and Quality

MORE THAN 50 YEARS' EXPERIENCE

We at POLYLUX help our customers improve their premises by providing them with high quality, reliable, safe products and solutions that can be adapted to all their needs for diverse industrial applications.

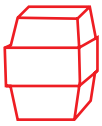
POLYLUX has extensive experience in the electrical sector, providing tailored solutions and implementing improvements to its products in order to adapt to market demands.

Our premises of over 20,000 m^2 include a production area of 12,000 m^2, an office area of 2,000 m^2 and the rest is used for services.

What makes our products different from others? Continuous improvement and quality.

Dip varnishing. + **Drying in a high compactation furnace**

These two processes prevent noise and vibrations in the operation of our products. This achieves increased isolation and additional protection against damp.



Flame retardant resin encapsulation.

This process gives our products high resistance to thermal contrasts and complies with the UL94 V0 plastics flammability standard.

Magnetic cores.

We use magnetic cores with different properties and construction formats to achieve high efficiency.

Flexibility in the final product construction.

We adapt to all installation needs and design enclosures with different IP grades. Certified IP23 and IP65 enclosures.

Product testing.

Automatic checks and tests on ALL the products, in accordance with the standards.

Customer focus.

Technical support team that offers advice on product installation and maintenance.

Strict quality control and 100% checking of products.

POLYLUX manufactures transformers for general use and for the most demanding applications such as the petrochemical, railway, marine, hospital, renewable energy and pool sectors, among others. Our innovative range of harmonic filters and compensators provides a unique and very effective solution to harmonic problems in office and industrial installations. In addition, **POLYLUX** has a stabilised and non-stabilised power supply unit range for all types of direct current applications.

All our transformers have welded terminals, which brings greater reliability and connection stability. On the other hand, our dip varnished finishes provide protection against corrosive environments, greater compactation, noise reduction and an increase in service life and electrical isolation. POLYLUX specialises in encapsulation resins, adding many technical advantages to its products.

The products manufactured by **POLYLUX** are used for voltage conversion, safety of installations and electrical energy quality. Our goal is to provide an extensive range of products in this field in order to offer our customers the most complete solutions. With **more than 50 years' experience** we provide a wide variety of transformers with powers ranging from 40 VA to 1000 kVA.

POLYLUX is aware that the implementation of energy saving solutions will only be effective if they are economically profitable for the customer and the end user. All our products are manufactured and checked in accordance with international standards and strict parameters.

We apply continuous innovation as a basis for adapting to new market demands and in order to continue to be a leading firm in our sector. Within this context, we continuously improve our product range and develop ground-breaking products that offer our customers new solutions.

P SERIES

Control manoeuvre and isolation

Definition and applications

Our P series equipment has a robust, modern design and is perfect for continuous operation in supplying industrial, tertiary or residential installations and machinery. Due to its design, it has an IP20 rating that prevents direct electrical contact and protects windings perfectly.
Its main applications are:

- Isolation of circuits, with the ability to increase or reduce the output voltage.
- Changing the neutral system of installations, with the ability to change from a two-phase network to a single one or vice versa (this case entails creating an artificial neutral).
- In installations with a determined level of electrical noise, the user of the transformer helps improve the quality of the electrical network in secondary.
- Installations that require a safety voltage (<50 V).
- The ability to isolation more sensitive systems in a control panel.
- Obtaining different control and manoeuvre voltages in an electrical panel.

Manufacturing characteristics

All the versions have the following features in common:

- Anti-flash dip varnishing. Ensures greater compactation, isolation and noise elimination.
- Bridges for the different connections included in the product packaging.
- Option of mounting on **DIN rail up to 250 VA**.
- Convertible from Class I to Class II (up to 2500 VA).
- LED indicator lamp.
- Full power in all sockets.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

Up to 2500 VA.

- Technical polymer box.
- UL 94 V-0 flame retardant material.
- Protective terminal cover to prevent direct contact.
- Ventilation ducts at the top and along the perimeter.
- Feature label with all the connection and protection instructions.

From 3150 VA.

- Epoxy painted metal box resistant to all types of damp and corrosive atmospheres.
- Protective terminal cover to prevent direct contact.
- Ventilation ducts along the box perimeter.
- Feature label with all the connection and protection instructions.

NEW head design

- Increased wiring insulation.
- Clearer features.
- Easier connection.
- More uniform, compact and robust design.

Technical features - standard model

Rating	**40 VA to 5000 VA**
Insulators	**Class H - 180 ºC**
Temperature rise	**Class B - 130 ºC**
Winding	**Class HC - 200 ºC**
Room temperature	**45 ºC**
Frequency	**50-60 Hz**
Noise	**≤ 45 dB**
Protection rating	**IP20**
Cooling	**ANAN**
Includes	**LED indicator lamp**
Mounting	**With screws (for all powers)** **Mounting on DIN 46277/3 rail (up to 250 VA)**
Standards	**IEC/EN/UNE-EN 61558, CE**
Protection	**Convertible from Class I to Class II (up to 2500 VA).**
Voltage selection	**Metallic bridges, included**
Operation	**Continuous**
Test voltage	**4.6 kV (1 min., 50 Hz) between primary and secondary** **3.2 kV (1 min., 50 Hz) between primary and ground** **2.5 kV (1 min., 50 Hz) between secondary and ground**

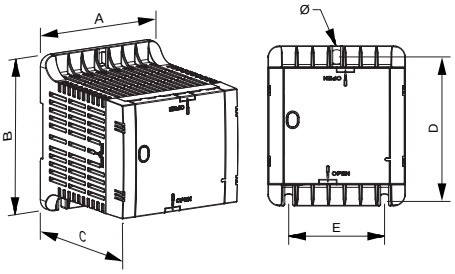
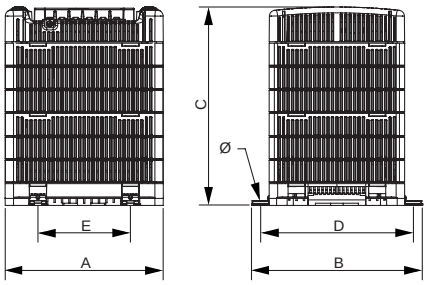
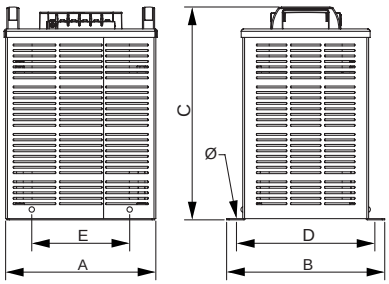
Up to PB500, PC1000 and PD1000



From PC1250 to PC2000
From PD1250 to PD2500



From PD3150

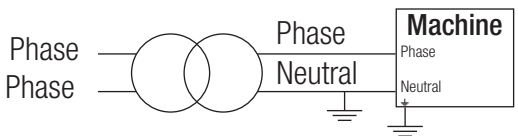


On-request manufacturing options (please see prices)

Power	**From 25 VA to 5000 VA**
Voltage	**From 6 V to 1100 V**
Shields	**Primary / secondary, primary / ground and secondary / ground**

Creating neutral

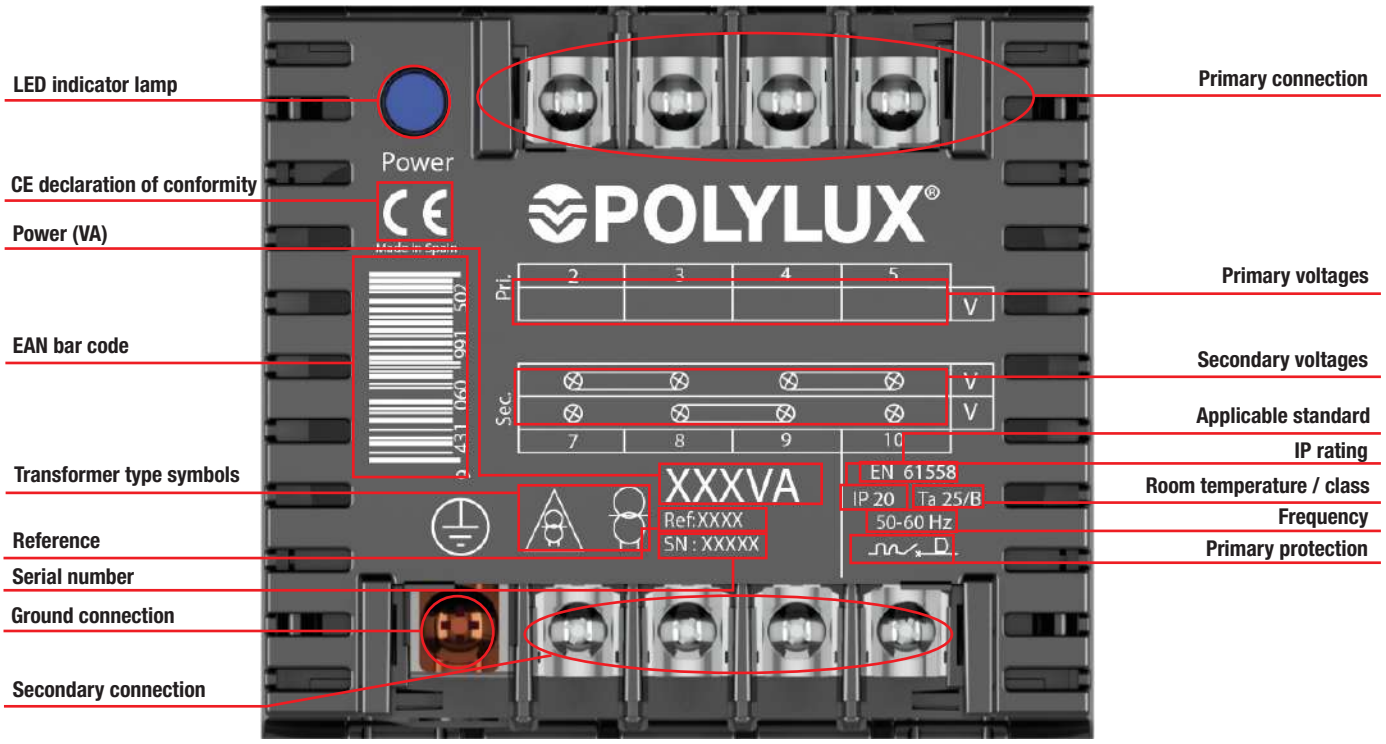
To perform this procedure: use a single-phase transformer with the appropriate power and connect it to primary with both phases and create a bridge at the output between one of the output phases and ground. This line will act as neutral from this moment.

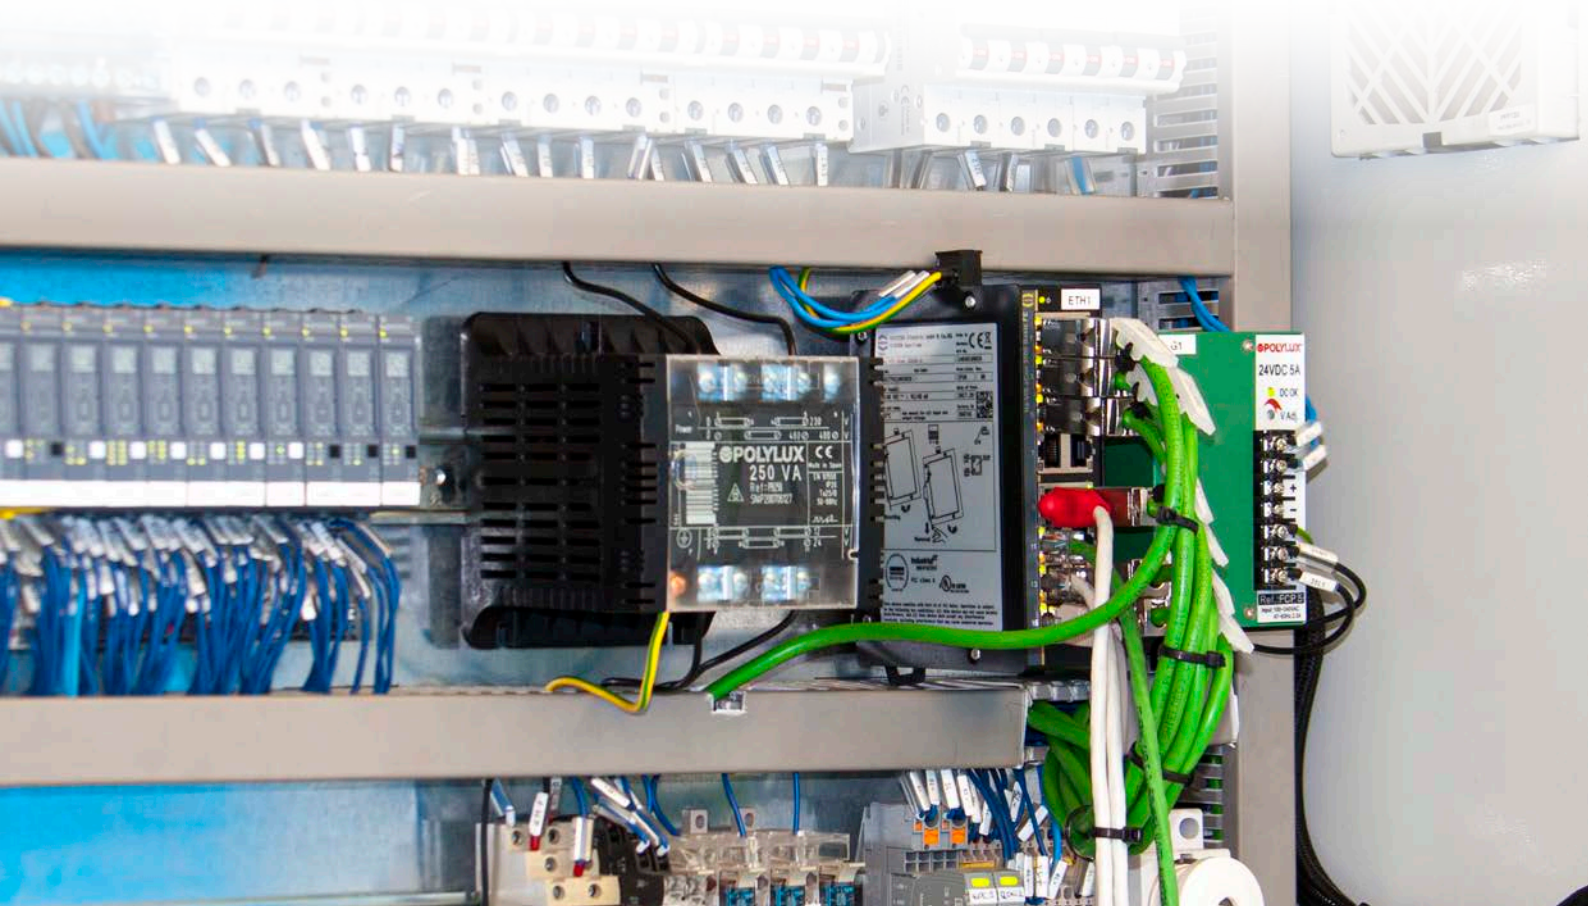


P SERIES

Control manoeuvre and isolation

Feature plate structure





Q SERIES

Encapsulated control, manoeuvre and isolation

Up to 1000 VA

- Technical polymer box.
- UL 94 V-0 flame retardant material.
- V-0 flame retardant resin encapsulation.
- Protective terminal cover to prevent direct contact.
- Feature label with all the connection and protection instructions.

From 1250 VA

- Completely encapsulated in flame retardant resin V-0.
- Protective terminal cover to prevent direct contact.
- Feature label with all the connection and protection instructions.

NEW head design

- Increased wiring insulation.
- Clearer features.
- Easier connection.
- More uniform, compact and robust design.

Definition and applications

The QB and QC control and manoeuvre transformers are specially designed for applications that require the adaptation of small voltages or where galvanic isolation is required for small loads or with safety voltages.
The QD transformers provide galvanic isolation between primary and secondary. **Its main applications include protection from single-phase electrical contacts** and isolation of the load / isolation of the network as well as the creation of neutrals referenced to ground.
Indicated for naval, wind farm, solar, pool, garden and railway installations and for oil rigs.

Manufacturing characteristics

- Protection against indirect contacts.
- Convertible from Class I to Class II.
- LED indicator lamp included.
- Full power in all sockets.
- Voltage selection by metallic bridges (included).
- Mounted on **DIN rail (up to 100 VA)** or with screws.
- Option of special fabrications if the standard specification are inadequate.
- Protection against damp, saline and corrosive environments.
- Greater mechanical resistance to vibrations, power surges and transient harmonics.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

Technical features - standard model

Rating	**40 VA to 2500 VA**
Insulators	**Class H - 180 ºC**
Temperature rise	**Class B - 130 ºC**
Winding	**Class HC - 200 ºC**
Room temperature	**45 ºC**
Frequency	**50-60 Hz**
Noise	**≤ 40 dB**
Protection rating	**IP20**
Cooling	**AN**
Includes	**LED indicator lamp**
Mounting	**With screws (for all powers)** **Mounting on DIN 46277/3 rail (up to 100 VA)**
Standards	**IEC/EN/UNE-EN 61558, CE**
Protection	**Convertible from Class I to Class**
Voltage selection	**Metallic bridges, included**
Operation	**Continuous**
Test voltage	**4.6 kV (1 min., 50 Hz) between primary and secondary** **3.2 kV (1 min., 50 Hz) between primary and ground** **2.5 kV (1 min., 50 Hz) between secondary and ground**

Definition and applications

The NB and NC control and manoeuvre transformers are specially designed for applications that require the adaptation of small voltages or where galvanic isolation is required for small loads or with safety voltages.
The ND transformers do not provide galvanic isolation between primary and secondary.
Its main applications include protection from single-phase electrical contacts and isolation of the load / isolation of the network as well as the creation of neutrals referenced to ground.
Indicated for naval, wind farm, solar, pool, garden and railway installations and for oil rigs.

Manufacturing characteristics

- Terminal protection cover.
- Mounting on **DIN rail (up to 100 VA)** or with screws.
- Electrical feature and connection label.
- Protection against damp, saline and corrosive environments.
- Greater mechanical resistance to vibrations, power surges and transient harmonics.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

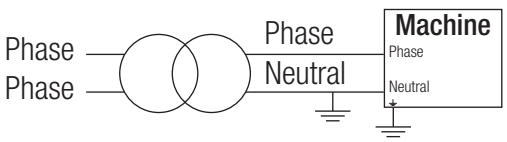
Voltage	**From 6 V to 1100 V**
Shields	**Primary / secondary, primary / ground and secondary / ground**

Creating neutral

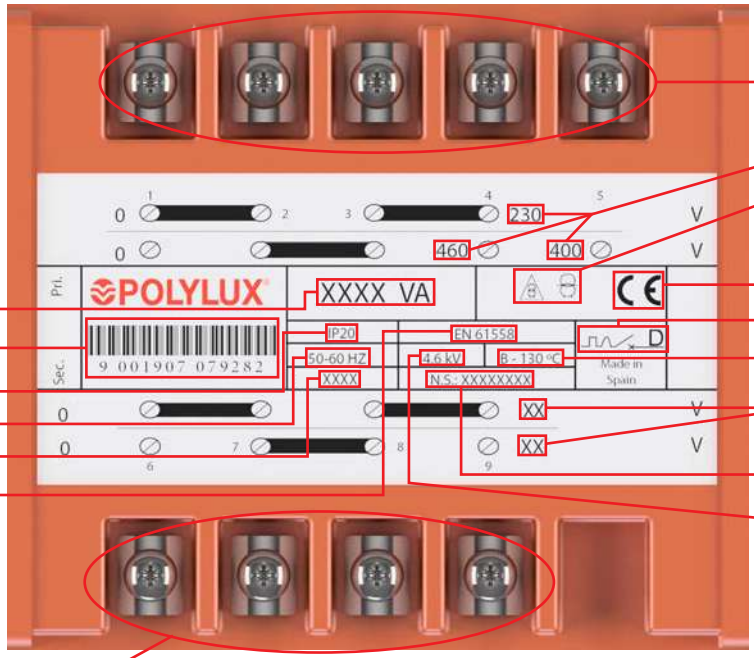
To perform this procedure: use a single-phase transformer with the appropriate power and connect it to primary with both phases and create a bridge at the output between one of the output phases and ground. This line will act as neutral from this moment.



N SERIES

Encapsulated control, manoeuvre and isolation

Feature plate structure



PTU SERIES

Ultra-isolation · Input **230 V** · Output **230 V**

Definition and applications

The PTA ultra-isolation transformers series is designed for high-noise environments where shielding is required to ensure good signal quality.
This series has two types:

- With 1 electrostatic shield (PTU1P) for minor perturbations between primary and secondary
- With 3 electrostatic shields (PTU3P) for high perturbations at the start of the winding between primary and secondary, and at the end of the winding.

Manufacturing characteristics

All the versions have the following features in common:

- Anti-flash dip varnishing. Ensures greater compactation, isolation and noise elimination.
- Noise and parasite attenuation depending on whether there are 1 or 3 electrostatic shields.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

Up to 2500 VA

- Technical polymer box.
- UL 94 V-0 flame retardant material up to 2500 VA (PTU1P) or 2000 VA (PTU3P).
- Protective terminal cover to prevent direct contact.
- Ventilation ducts at the top and along the perimeter.
- Feature label with all the connection and protection instructions.

From 2500 VA

- Epoxy painted metal box resistant to all types of damp and corrosive environments from 3150 VA (PTU1P) or 2500 VA (PTU3P).
- Protective terminal cover to prevent direct contact.
- Ventilation ducts along the box perimeter.
- Feature label with all the connection and protection instructions.

NEW head design

- Increased wiring insulation.
- Clearer features.
- Easier connection.
- More uniform, compact and robust design.

PTU SERIES

Ultra-isolation · Input **230 V** · Output **230 V**

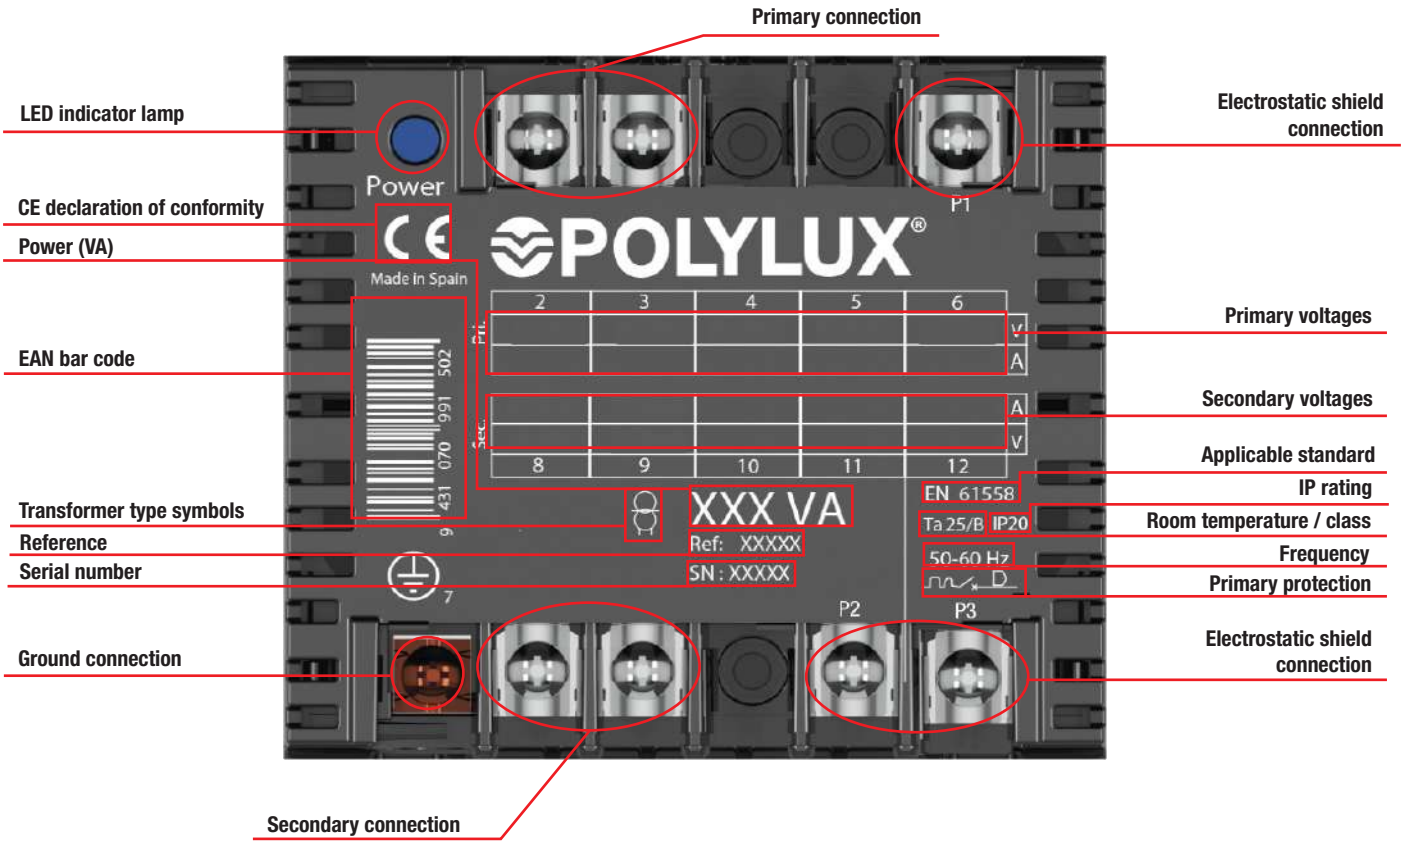
Feature plate structure



QTU SERIES

Encapsulated ultra-isolation · Input **230 V** · Output **230 V**

Definition and applications

The QTU series is designed for high electrical noise environments where shielding is required to ensure good signal quality.
In addition, the resin encapsulation makes the QTU transformers the best option for areas that require great resistance to vibrations, damp or corrosion.
This series has two types:

- With 1 electrostatic shield (QTU1P) for minor perturbations between primary and secondary
- With 3 electrostatic shields (QTU3P) for high perturbations at the start of the winding between primary and secondary, and at the end of the winding.

Manufacturing characteristics

- Protected against indirect contacts.
- Convertible from Class I to Class II up to 1000 VA (QTU1P) or 800 VA (QTU3P).
- LED indicator lamp included.
- Mounted on **DIN rail (up to 100 VA in QTU1P or up to 63 VA in QTU3P**) or with screws.
- All the live parts of these transformers are encapsulated in resin, which is particularly indicated for working in damp, saline and corrosive environments.
- They have greater resistance to current surges and transient harmonics.
- Greater mechanical resistance to vibrations and undesirable movements.
- Noise and parasite attenuation depending on whether there are 1 or 3 electrostatic shields.
- Uniform heat dissipation.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

Up to 1000 VA

- Technical polymer box.
- UL 94 V-0 flame retarden material up to 1000 VA (QTU1P) or 800 VA (QTU3P).
- Protective terminal cover to prevent direct contact.
- Feature label with all the connection and protection instructions.

From 1250 VA

- Completely encapsulated in flame retardant resin from 1250 VA (QTU1P) or 1000 VA (QTU3P).
- Protective terminal cover to prevent direct contact.
- Feature label with all the connection and protection instructions.

NEW head design

- Increased wiring insulation.
- Clearer features.
- Easier connection.
- More uniform, compact and robust design.

Sectioned transformer

PIL SERIES

For LED spotlights in pools and gardens · Input **230 V** · Output **12 V**

Definition and applications

An isolation and safety transformer with an output voltage of 12 V.

Their main applications are for pool and garden spotlights and they can be used as control and manoeuvre transformers in installations that pose a danger of contacts for persons.

Manufacturing characteristics

All the versions have the following features in common:

- Anti-flash dip varnishing. Ensures greater compactation, isolation and noise elimination.
- Option of mounting on **DIN rail for all powers**.
- IP20 enclosure, V-0 flame-retardant polymer box that complies with UL94.
- Safety Class I, convertible to Class II.
- LED indicator lamp included.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

NEW head design

- Increased wiring insulation.
- Clearer features.
- Easier connection.
- More uniform, compact and robust design.

NEW head design

- Increased wiring insulation.
- Clearer features.
- Easier connection.
- More uniform, compact and robust design.

Definition and applications

An isolation and safety voltage transformer with an output voltage of 12 V, fitted with a copper shield between primary and secondary, to provide complete safety for persons against electrical risks.
Its main applications are for pool and garden spotlights, and it can be used as a control and manoeuvre transformer in installations that pose a risk of electrical contact for persons.

Manufacturing characteristics

All the versions have the following features in common:

- **Important note**: copper shield between primary and secondary with connection to ground screw that prevents shunt voltage crossovers to the secondary circuit, thus posing no electrical risks for persons.
- Anti-flash dip varnishing. Ensures greater compactation, isolation and noise elimination.
- Bridges for the different connections included in the product packaging.
- Option of mounting on **DIN rail up to 300 VA**.
- IP20 enclosure, V-0 flame-retardant polymer box that complies with UL94.
- Safety Class I, convertible to Class II.
- Supplied with LED indicator lamp, electrostatic shield and adjustment through primary depending on the distance between the spotlight and the transformer (100 VA [10m, 20m, 30m] in 300 VA and 600 VA [10m, 25m, 40m]).
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

NEW head design

- Increased wiring insulation.
- Clearer features.
- Easier connection.
- More uniform, compact and robust design.

Definition and applications

An isolation and safety voltage transformer with an output voltage of 12 V, fitted with a copper shield between primary and secondary, to provide complete safety for persons against electrical risks.
Its main applications are spotlights in pools and gardens and it can be used as a control and manoeuvre transformer in installations that pose a risk of electrical contact for persons.

Manufacturing characteristics

All the versions have the following features in common:

- **Important note**: copper shield between primary and secondary with connection to ground screw that prevents shunt voltage crossovers to the secondary circuit, thus posing no electrical risks for persons.
- Encapsulated in flame retardant resin.
- Bridges for the different connections included in the product packaging.
- Option of mounting on **DIN rail up to 100 VA**.
- IP20 enclosure, V-0 flame-retardant polymer box that complies with UL94.
- All the live parts of these transformers are encapsulated in resin, which is particularly indicated for working in damp, saline and corrosive environments.
- They have greater resistance to current surges and transient harmonics.
- Greater mechanical resistance to vibrations and undesirable movements.
- Safety Class I, convertible to Class II.
- Supplied with LED indicator lamp, electrostatic shield and adjustment through primary depending on the distance between the spotlight and the transformer (100 VA [10m, 20m, 30m] in 300 VA and 600 VA [10m, 25m, 40m]).
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

Feature plate structure

IP SERIES

IP54 rated encapsulated isolation

Definition and applications

The IP transformers are used for the galvanic isolation of single-phase installations based on safety reasons and for the creation of neutrals referenced to ground.
Their IP54 casings make the IP transformers the ideal solution for outdoor installations.
The B version has 12V and 24V outputs and so it can be used in safety installations at voltages below 50 V with a high grade of protection or in outdoor installations.
Furthermore, the resin encapsulation makes the IP transformers the perfect solution in cases that require high resistance to vibrations, damp or corrosion oif the windings.

Manufacturing characteristics

The IPB and IPD models share the following characteristics:

- IP54 enclosure.
- Completely encapsulated in flame retardant resin.
- Protection against indirect contacts.
- Full power in all sockets.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

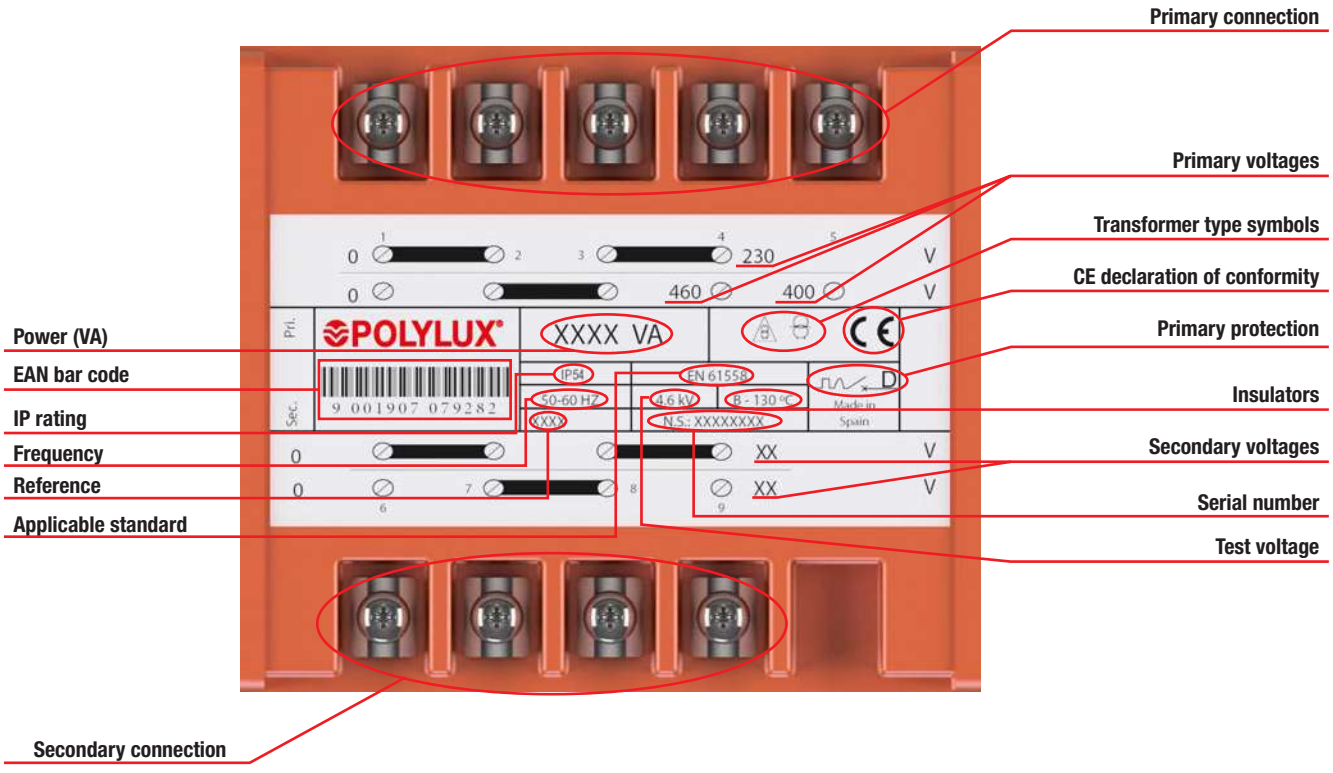
Feature plate structure



TP SERIES

Encapsulated safety PCs · Input **230 V** · Output **12 V (TPA) or 24 V (TPB)**

Definition and applications

The TP transformers are portable transformers designed for use in supplying low voltage single-phase loads in places that are difficult to reach, or where there is no power socket.
In addition, the flame retardant resin encapsulation make the TP transformers the ideal solution for areas that require high resistance to vibrations, damp or corrosion.
In outdoor installations where there are poor weather conditions, the high IP54 isolation protection rating also converts the TP transformers into the perfect solution for connecting low voltage appliances (spotlights, machinery, etc.) in damp places handled by personnel where there is a risk of electrocution.

Manufacturing characteristics

- Dry transformer encapsulated in flame retardant resin.
- Safety Class II.
- Indicator lamp included.
- Schuko input connection with 2 metre cable, CETAC output pins (160 VA 1 pin | 250 VA 2 pins | 400 VA and 630 VA 4 pins).
- Short circuit protection by means of a primary time-delay fuse.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

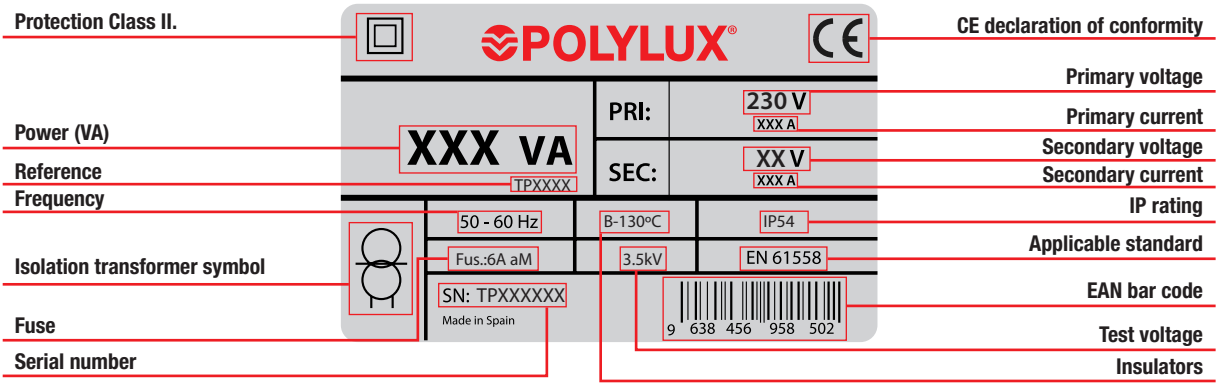
Feature plate structure



PTM SERIES

For measuring equipment

Definition and applications

The function of a measuring transformer is to provide a precise output voltage, isolating it from the input voltage. Firstly, it reduces the voltage to a lower value and secondly, it isolates the high voltage circuit from the measuring circuit.

Manufacturing characteristics

All the versions have the following features in common:

- Anti-flash dip varnishing. Ensures greater compactation, isolation and noise elimination.
- IP20 enclosure with next-generation V-0 flame retardant polymer box in accordance with UL94.
- Option of mounting on **DIN rail up to 7.5 VA**.
- Precision classes 0.2 / 0.5 / 1 based on power.
- Accepts a continuous surge current of 1.2 times the nominal voltage and a thermal power 6 times the nominal power.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

NEW head design

- Increased wiring insulation.
- Clearer features.
- Easier connection.
- More uniform, compact and robust design.

Technical features - standard model

Rating	**2 VA to 300 VA (class 0.2 / 0.5 / 1)**

Encapsulated for measuring equipment

Definition and applications

The function of a measuring transformer is to provide a precise output voltage, isolating it from the input voltage. Firstly, it reduces the voltage to a lower value and secondly, it isolates the high voltage circuit from the measuring circuit.

Manufacturing characteristics

All the versions have the following features in common:

- Encapsulated in flame retardant resin.
- Connection terminals made of copper, welded and inserted in blocks to prevent hazards caused by expansion that may lead to poor connection.
- IP20 enclosure, V-0 flame-retardant polymer box that complies with UL94.
- All the live parts of these transformers are encapsulated in resin, which is particularly indicated for working in damp, saline and corrosive environments.
- They have greater resistance to current surges and transient harmonics.
- Greater mechanical resistance to vibrations and undesirable movements.
- Safety Class I, convertible to Class II.
- LED indicator lamp included.
- Precision classes 0.2 / 0.5 / 1 based on power.
- Accepts a continuous surge current of 1.2 times the nominal voltage and a thermal power 6 times the nominal power.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

TMT SERIES

For adapting the voltage in measuring equipment

Definition and applications

The function of a measuring transformer is to provide a precise output voltage, isolating it from the input voltage. Firstly, it reduces the voltage to a lower high precision value and secondly, it isolates the high voltage circuit from the measuring circuit.

Manufacturing characteristics

- Built with independent circuits for the three phases to obtain a perfect balance betweem them and guarantee precision in measuring.
- Connection terminals made of copper, welded and inserted in blocks to prevent hazards caused by expansion that may lead to poor connection.
- LED indicator lamp (TMTW - TMTE).
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

TMTX

· IP00 protection rating.
· Total impregnated in anti-flash varnish.
· Hoisting elements included.

TMTW

· IP20 protection rating.
· Epoxy painted metal box resistant to all types of damp and corrosive environments.
· Protective cover for terminals to prevent direct contact.

TMTE

· **Encapsulated in flame retardant resin.**
· IP20 protection rating.
· Protection against damp, saline and corrosive environments.
· Protective cover for terminals to prevent direct contact.
· Greater resistance to surge currents.
· Greater resistance to transient harmonics.
· Greater mechanical resistance to undesirable vibrations.
· Uniform heat dissipation.

TIB SERIES

Primary winding · Secondary current **5 A**

Definition and applications

The TIB transformer series are current transformers designed for use as energy monitoring products.
They may be used as measuring transformers or protection transformers:

- **Measuring transformer**:
  Short circuiting in terminals or connection to ground may be done using the fast-on or connecting two cables to the same terminal.

- **Protection transformer**:
  When a current transformer is is used to create a current for protection relays, its characteristics are different from those of measuring transformers.
  In fact the magnetic circuit of the measuring transformer will be saturated with Class 5P in primary currents, whereas in the protection transformers, the value of the secondary currents must follow the increment in the primary currents, which may reach 10-15-20 In, to guarantee the activation of the relay in the event of an unforeseen power cut.
  It is important not to load with a power (P) greater than that indicated to ensure that the current transformer saturation value is not modified.
  $P = R * I^2$
  P= Load connected to the current transformer.
  R= Relay resistance + cable resistance
  I = Nominal secondary current of the current transformer

TIP SERIES

Primary pass-through · Secondary current **5 A**

Definition and applications

The TIP series transformers are current transformers designed for use as energy monitoring products.
They may be used as measuring transformers or protection transformers:

- **Measuring transformer**:
  Short circuiting in terminals or connection to ground may be done using the fast-on or connecting two cables to the same terminal.

- **Protection transformer**:
  When a current transformer is is used to create a current for protection relays, its characteristics are different from those of measuring transformers.
  In fact the magnetic circuit of the measuring transformer will be saturated with Class 5P in primary currents, whereas in the protection transformers, the value of the secondary currents must follow the increment in the primary currents, which may reach 10-15-20 In, to guarantee the activation of the relay in the event of an unforeseen power cut.
  It is important not to load with a power (P) greater than that indicated to ensure that the current transformer saturation value is not modified.
  $P = R * I^2$
  P= Load connected to the current transformer.
  R= Relay resistance + cable resistance
  I = Nominal secondary current of the current transformer

CTM4 SERIES

Temperature control unit

Technical features - standard model

Auxiliary power supply	
Operating voltage	**115-230-400 VAC // 24÷230 VAC/DC (optional)**
Nominal frequency	**50-60 Hz**
Self-consumption	**4 VA max.**
Inputs	
Sensors	**4 PT100 RTD (not included)**
Type	**3 wires (2 and 4 versions are also admitted)**
Measuring range	**-30 ... + 220 °C**
Compensation	**20 Ω max.**
Intervention delay / hysteresis	**5 s / 2 °C**
Relay outputs	
Number	**4**
Type	**NA-C-NC**
V max.	**12 VDC**
1 max.	**8 A (resistive load)**
Functions	**Alarm, intervention, ventilation and self-diagnosis**
RS485 serial interface (option)	
Serial node address	**01-247**
Programmable baud rate	**2400 - 19200 bps**
Data format	**8 bit, no parity - 8 bit, odd - 8 bit, even**
Stop bits	**1-2**
Protocol	**Modbus RTU**
Monitor	
Technology	**7-segment LED**
Connections	
Terminals	**Detachable screws**
Maximum cross-section	**2.5 mm²**
Insulation	
Voltage	**2.5 kV for 1 minute**
Environmental operating conditions	
Operating temperature	**-10 ... +55 °C**
Storage temperature	**-25 ... +80 °C**
Relative humidity	**90% max.**
Enclosure	
Dimensions	**96x96 mm**
Weight	**0.5 kg**
Protection rating	**IP52 front // IP20 rear**
Conformity	
Standards	**CEI EN 61000-6-2: 2006 CEI EN 61000-6-4: 2007 CEI EN 61010-1: 2013**

Definition and applications

An excessive increase in the temperature of a power transformer is a sign of overload or malfunctions; the detection of critical values enables a preventive diagnosis of the system, anticipating faults and costly damages.
The CTM4 temperature measuring unit makes it possible to measure and control four temperature values usually related to the winding and for the international temperature of the panel, measured with PT100 sensors from -30 to +220 ° C.
Two alarm levels can be set for each measuring channel (alarm tripper) to activate the switching of the output relays, which can be used for remote signalling or for the controlled disabling of the equipment. There are five programming keys on the front part of the instrument and two 3-digit displays that show temperatures and the alarm status of the measuring channels. The presence of a RS485 serial port or an ethernet port permits the control and programming of the station and connection via a Modbus-RTU or Modbus-TCP protocol to acquisition systems (PC, PLC, SCADA, etc.)

Manufacturing characteristics

- Viewing of instant and maximum temperature.
- Double intervention level: alarm (ALARM) and release (TRIP).
- Self-diagnosis function for anomalies or incorrect installation (FAULT).
- Programmable outputs for all types of anomalies or failure conditions.
- Option of forced ventilation activation (FAN).
- FDC function for automatic control of temperature difference in a defined time.
- RS485 serial port modbus RTU for integration with supervision or remote control networks.

Accessories applicable on request

- IP65 front cover (CAL96x96)

MR12 SERIES

Remote monitor for up to 12 viewers VA40-485

Definition and applications

The MR12 remote monitoring system device provides a data gathering function and a supervisory interface.
The remote control is for the VA40 with an RS485 Modbus-RTU communication bus.
It can monitor up to 12 VA40-485 units.

Manufacturing characteristics

- LCD graphic display,128x64 pixels
- Panel-mounted, standard 96x96 mm container
- 4 keys at front for viewing and settings
- Integrated buzzer
- Built-in double RS485 communication interface
- Fast, simple navigation
- Front programming

Technical features - standard model

Auxiliary power supply	
Operating voltage	**90-250 VAC // 20-60 VCA/DC (optional)**
Nominal frequency	**45-65 Hz**
Self-consumption	**4 VA**
RS485 COM1 serial interface	
Programmable baud rate	**9600-38400 bps**
RS485 COM2 serial interface (optional)

VA40 SERIES

Insulation monitor and RS485 communication bus

Definition and applications

The insulation monitor applies a direct current measuring signal between the insulated line and ground, in order to detect whether a leakage current has been generated.
To ensure the measuring efficiency, even in the presence of perturbations and harmonic components, the monitor has a built-in digital filter and also uses an encoded signal.
The VA40 also permits the control of the electrical and thermal overload of the medical isolation transformer, controlling two different temperature thresholds in the PT100 and PTC sensors. The temperature control enables the monitoring of the transformer overload and bypasses the circuit breaker downstream of the secondary.
To detect **AC and DC leakages** we have the **VA40F-485**.

Technical features - standard model

Supply voltage	**110 - 230 V**
Frequency	**50-60 Hz**
Network voltage to be checked	**24 ÷ 230 VCA**
Maximum voltage measurement	**24 V**
Maximum current measurement	**1 mA**
Insulation voltage	**2.5 kV / 60 seconds**
Type of control signal	**Continuous component with digital filter**
Measurements detected	**Insulation measuring range 0 ÷ 999 kΩ HIGH - resolution of 1 kΩ** **Measuring of temperature with Rd PT100 thermal sensor with 2 or 3 wires - 0 ÷ 250 °C, precision 2%** **Impedance measurement 0 ÷ 999 kΩ / HIGH - resolution 1 kΩ (test signal 2500 Hz)**
Intervention thresholds	**Low insulation 50 ÷ 500 kΩ, precision 5%, hysteresis, configurable delay** **Overtemperature 0 ÷ 200 °C, precision 2%** **Current overload 1 ÷ 999 A, precision 2%** **Low impedance (can be disabled)** **Device not connected to line (Link-Fail)**
Available outputs	**Up to a maximum of 4 CR5 panels for remote signalling** **Programmable auxiliary NA-C-NC relay output, 5A, 250 VCA** **RS485 serial output, standard Modbus RTU protocol**
Connections	**Maximum connectible cross-section 2.5 mm²**
Operating temperature	**-10...60 °C**
Storage temperature	**-25...70 °C, humidity <90%**
Dimensions	**6 DIN modules**
Weight	**0.5 kg**
Enclosure	**Self-extinguishing polymer for mounting on 35 mm DIN rail with transparent protective front cover**
Protection rating	**IP20**
Self-consumption	**5 VA**
Standards	**IEC EN 60364-7-710, IEC EN 61557-8, EN 60255-6, UNE 20615**

Manufacturing characteristics

All failure conditions are controlled remotely thanks to a connection with the CR5 remote signalling panels to guarantee the opportune adequate technical supervision.
In addition, it is fitted with an RS485 serial port through which it can be perfectly integrated with PLC / PC communication systems using the Modbus RTU protocol.
Lastly, it is worth noting that the VA40 has a self-diagnosis system called ERROR-LINK FAIL, which checks the presence and correction of cabling at the ends of the terminals, thus ruling out the possibility of having unit 2 in operation in the medical room without the supervision of the insulation monitor.

CR5 SERIES

Panel indicator light

Definition and applications

The CR5 remote signalling panel permits the reporting of the insulation monitor alarm signals in all the manned rooms, as required by the reference standards.
The CR5 panel produces an acoustic and a luminous signal in the case of an alarm due to low insulation or in the event of a thermal and electrical overload. It also has a TEST button to perform regular checks on the operating status and a button to silence the acoustic signal.

Technical features - standard model

Acoustic signal.	**2400 Hz emission 2 Hz dB intermittence**
Terminal cross-section	**2 mm²**
Protection rating	**IP30**
Weight	**200 g**
Operating temperature	**-10 ÷ 60 °C, maximum humidity 95%**
Storage temperature	**-20 ÷ 80 °**
Insulation	**2500 v rms 50 Hz for 60 s**

TR SERIES

Encapsulated rectifiers with no filter · Input **230 V** · Output **12 V (TRA), 24 V (TRB) and 48 V (TRC)** · Not stabilised

Definition and applications

The TR rectifier transformers are used in applications in which the loads must be supplied continuously and can operate with a voltage ripple of 48%.

Manufacturing characteristics

All the versions have the following features in common:

- Connection terminals made of copper, welded and inserted in blocks to prevent hazards caused by expansion that may lead to poor connection.
- Option of mounting on **DIN rail up to TRA4 and TRB2.5**.
- Encapsulated in resin
- All the live parts of these transformers are encapsulated in resin, which is particularly indicated for working in damp, saline and corrosive environments.
- They have greater resistance to current surges and transient harmonics.
- Greater mechanical resistance to vibrations and undesirable movements.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

Technical features - standard model

Output current	**1.6 A to 63 A**

TR SERIES

Encapsulated rectifiers with no filter · Input **230 V** · Output **12 V (TRA), 24 V (TRB) and 48 V (TRC)** · Not stabilised

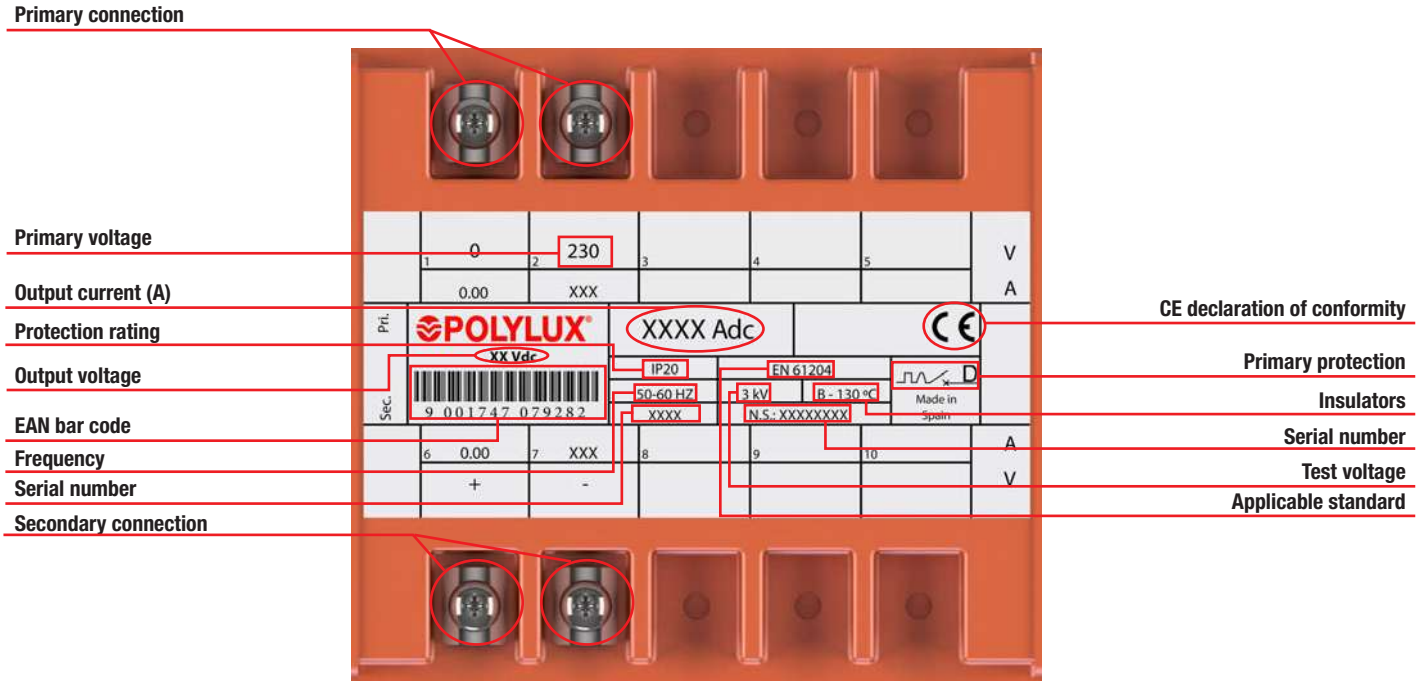
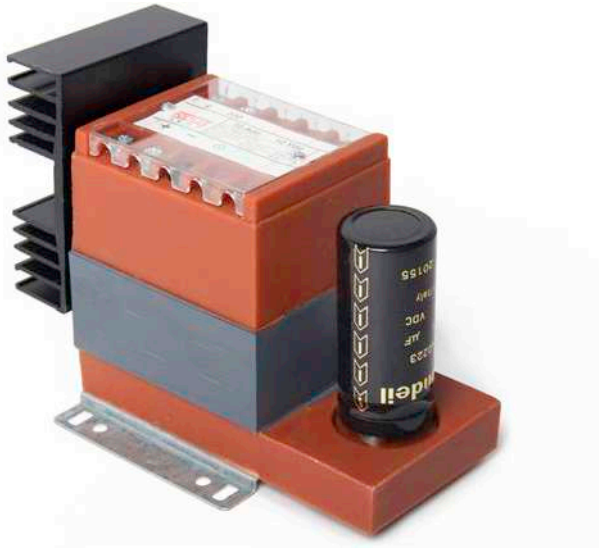
Feature plate structure



TRF SERIES

Encapsulated rectifiers with filter · Input **230 V** · Output **12 V (TRFA), 24 V (TRFB) and 48 V (TRFC)** · Not stabilised



Definition and applications

The TRF rectifier transformers are used in applications where the loads require a continuous power supply.
With the built-in filter, a ripple of 5% can be obtained, which is suitable for all applications.

Manufacturing characteristics

All the versions have the following features in common:

- Connection terminals made of copper, welded and inserted in blocks to prevent hazards caused by expansion that may lead to poor connection.
- Option of mounting on **DIN rail up to TRFA2.5, TRBF2.5 and TRFC1.6**.
- Encapsulated in resin
- Protection against electrodynamic stress.
- All the live parts of these transformers are encapsulated in resin, which is particularly indicated for working in damp, saline and corrosive environments.
- They have greater resistance to current surges and transient harmonics.
- Greater mechanical resistance to vibrations and undesirable movements.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

TRT SERIES

Encapsulated rectifiers · Input **400 V** · Output in DC **12 V (TRTA), 24 V (TRTB) and 48 V (TRTC)** · Not stabilised

Definition and applications

The TRT series transformers are encapsulated three-phase transformers for use in applications in which the loads require a continuous power supply when there is a three-phase power supply network.

Manufacturing characteristics

- Terminal protection cover.
- Mounted with screws.
- Electrical feature and connection label.
- Protection against damp, saline and corrosive environments.
- Greater mechanical resistance to vibrations, surge currents and electrodynamic stress.
- LED indicator lamp and overtemperature protection included.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

FCP SERIES

Switched single-phase

Definition and applications

The FCP series consists of power sources designed for all those application that require a continuous power supply. Thanks to their compact and functional design, they are easy to connect and provide an economical solution.

Manufacturing characteristics

All the versions have the following features in common:

- High power density
- Universal input range
- Mounting on **DIN rail**.
- Protection against surge currents, overload and short circuit
- All the power sources are checked automatically one by one and a compliance report is created based on the respective standard.

TH SERIES

Isolation transformers for clinical electrical installations · Input 230 V · Output 230 V

Definition and applications

Our TH series is manufactured in accordance with the IEC/EN 61558-2-15 standard and is focused on safety in instalations for clinical use, guaranteeing patient safety.

Manufacturing characteristics

- Anti-flash varnish finish.
- Safety Class I.
- Hoisting bolts, bimetallic contact against overtemperature and electrostatic shield included.
- Leakage current <0,5 mA between secondary and ground.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

THX

· IP00 protection rating.
· Total impregnated in anti-flash varnish.
· Hoisting elements included.
· **UL certification.** FILE: E532753 - Construction only.

THW

· IP23 rating (IK08).
· Metal box painted with polyester resin.
· High resistance to corrosion.
· Hoisting elements included.
· Detachable top and front cover.
· Cable outlet with cable gland.
· **UL certification.**

TH

· **Encapsulated in flame retardant resin.**
· IP20 protection rating.
· Protection against damp, saline and corrosive environments.
· Greater resistance to surge currents.
· Greater resistance to transient harmonics.
· Greater mechanical resistance to undesirable vibrations.
· Uniform heat dissipation.
· Hoisting elements included.

TH SERIES

Isolation transformers for clinical electrical installations · Input **230 V** · Output **230 V**

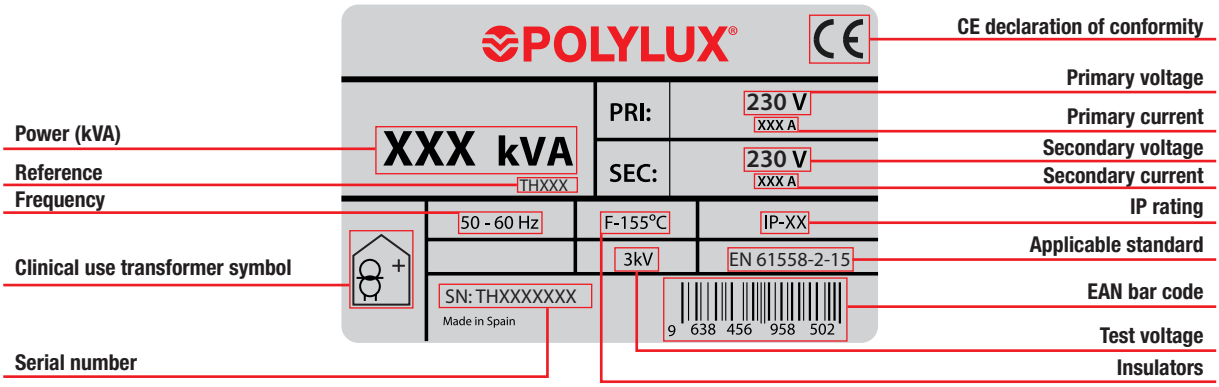
Feature plate structure



TLQ SERIES

For operating theatre spotlights · Input **230±5% V** · Output **0-24 / 25 / 26 / 27 V**

Definition and applications

Our TLQ series consists of single-phase isolation transformers specially designed for operating theatre spotlights.

Manufacturing characteristics

All the versions have the following features in common:

- Copper shield between primary and secondary with ground screw connection, which prevents crossovers with network voltage shunts to secondary, thus preventing electrical risks for persons.
- Anti-flash dip varnishing. Ensures greater compactation, insulation and noise elimination.
- Option of mounting on **DIN rail up to 160 VA**.
- IP20 enclosure, V-0 flame-retardant polymer box that complies with UL94.
- Safety Class I, convertible to Class II.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

NEW head design

- Increased wiring insulation.
- Clearer features.
- Easier connection.
- More uniform, compact and robust design.

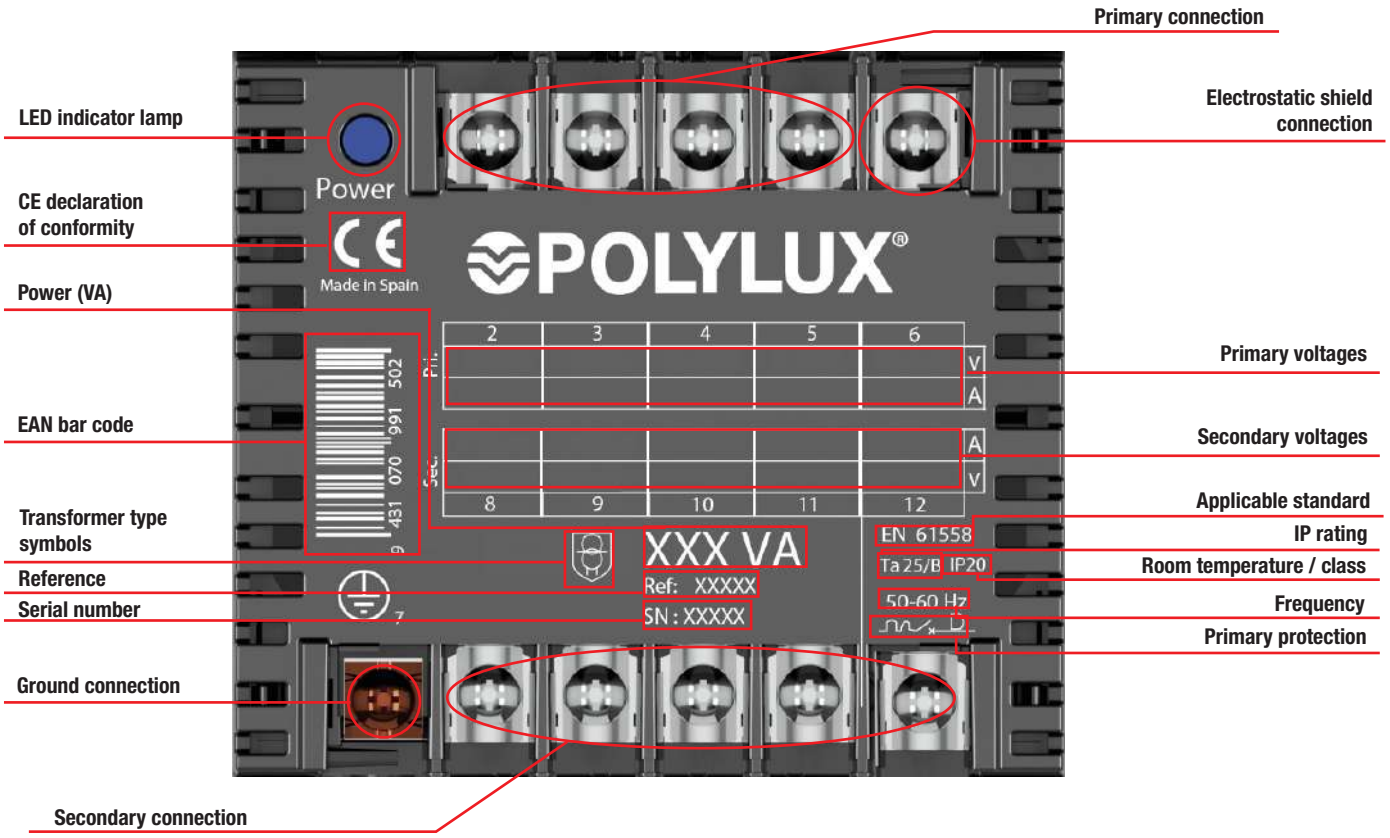
Feature plate structure



TTH SERIES

Insulation for clinical electrical installations · Input **400 V** · Output **230 V**

Definition and applications

Our TTH series is manufactured in accordance with the IEC/EN 61558-2-15 standard, focused on safety in clinical installations, and guaranteeing patient safety.

Manufacturing characteristics

- All the transformers are dipped in anti-flash varnish and then compacted in the furnace. This process increases the insulation grade, reduces noise and provides anti-moisture, waterproofed protection.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

TTHX

· IP00 protection rating.
· Power from 1 kVA to 10 kVA.
· Total impregnated in anti-flash varnish.
· Hoisting elements included.
· **UL certification.** FILE: E532753 - Construction only.

TTH

· **Encapsulated in resin**
· IP20 protection rating.
· Power from 0.40 kVA to 400 kVA.
· Protection against damp, saline and corrosive environments.
· Greater resistance to surge currents.
· Greater resistance to transient harmonics.
· Greater mechanical resistance to undesirable vibrations.
· Uniform heat dissipation.
· Hoisting elements included.

TTHW

· IP23 rating (IK08).
· Power from 1 kVA to 10 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Cable outlet with cable gland.
· Hoisting elements included.
· Detachable top and front cover.
· Cable outlet with cable gland.
· **UL certification.**

TTH SERIES

Insulation for clinical electrical installations · Input **400 V** · Output **230 V**

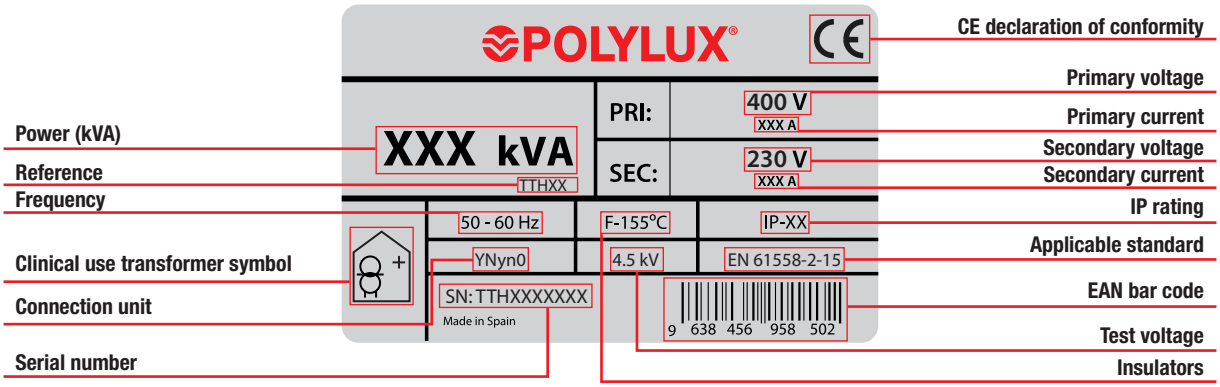
Feature plate structure



TTFK SERIES

Insulation for three-phase harmonic networks · Input **400 V** · Output **400 V** + N

Definition and applications

The TTFK series is comprised of insulation transformers for three-phase networks with high levels of harmonics.
These "k" factor transformers are used to withstand overheating produced by non-linear load harmonics.
A k=13 factor transformer is used when the harmonic load represents 30% of the total load.
A k=20 factor transformer is used with the harmonic load represents 60% of the total load.

Manufacturing characteristics

- All the transformers are dipped in anti-flash varnish and then compacted in the furnace. This process increases the insulation grade, reduces noise and provides anti-moisture, waterproofed protection.
- Models with different "k" values can be manufactured on request.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

TTFKX

· IP00 protection rating.
· Power from 10 kVA to 500 kVA.
· Total impregnated in anti-flash varnish.
· Hoisting elements included.
· **UL certification.** FILE: E532753 - Construction only.

TTFKW

· IP23 rating (IK08).
· Power from 10 kVA to 500 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Cable outlet with cable gland.
· Hoisting elements included.
· Detachable top and front cover.
· **UL certification.**

TTFKZ

· IP65 rating up to 20 kVA / IP54 from 25 kVA (IK10).
· Power from 10 kVA to 500 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Stuffing box cover for cable input depending on installation needs.
· Hoisting elements included.
· Detachable top cover.
· With silentblock.
· **UL certification.**

Technical features - standard model

Rating	**10 kVA a 500 kVA**
Standard voltage	**Input 400 V // Output 400 V and N.**

Operation	**Intermittent, continuous**
Cooling	**Natural, forced ventilation**
Electrostatic shield	**Up to three shields**
Class	**I, II**
Altitude	**Up to 4000 m**
Protections	**In both primary and secondary (figure 1)**
Temperature sensors	**PT100 (figure 2), PTC (figure 3) or bimetallic**
Temperature control	**Temperature control station (4xPT100) (figure 4), PTC thermal relays (3xPTC / 6xPTC)**
Network analyser	**(Figure 5)**
Anti condensation system	**Higrostat**
Heating system	**Heating elements**
External protection	**Anti-flash varnish, metallic or stainless steel enclosure**
Transportation and hoisting	**Wheels (figure 6), lifting points**
Paint	**C3, C4, C5, different RAL**
Feature plate	**High generation polymer or stainless steel (figure 7)**
Anti vibration system	**Silentblock**
Adjustment	**-10%; -7.5%; -5%; -2.5%; +2.5%; +5%; +7.5%; +10% With bridges (figure 8) or selector (figure 9)**
Certified	**CE, DNV-GL, BV, UL (insulation) and POLYLUX laboratory**
Climate class / environment / fire	**Up to C2-E2-F1**

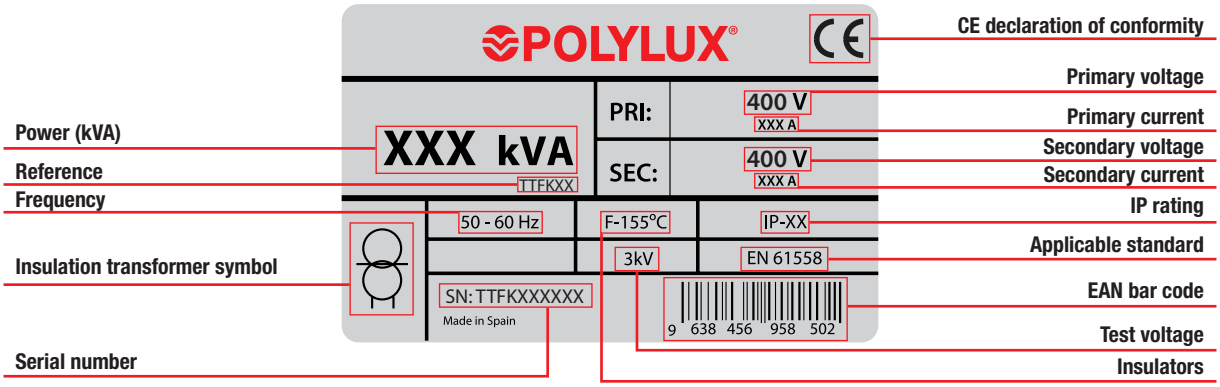
TTFK SERIES

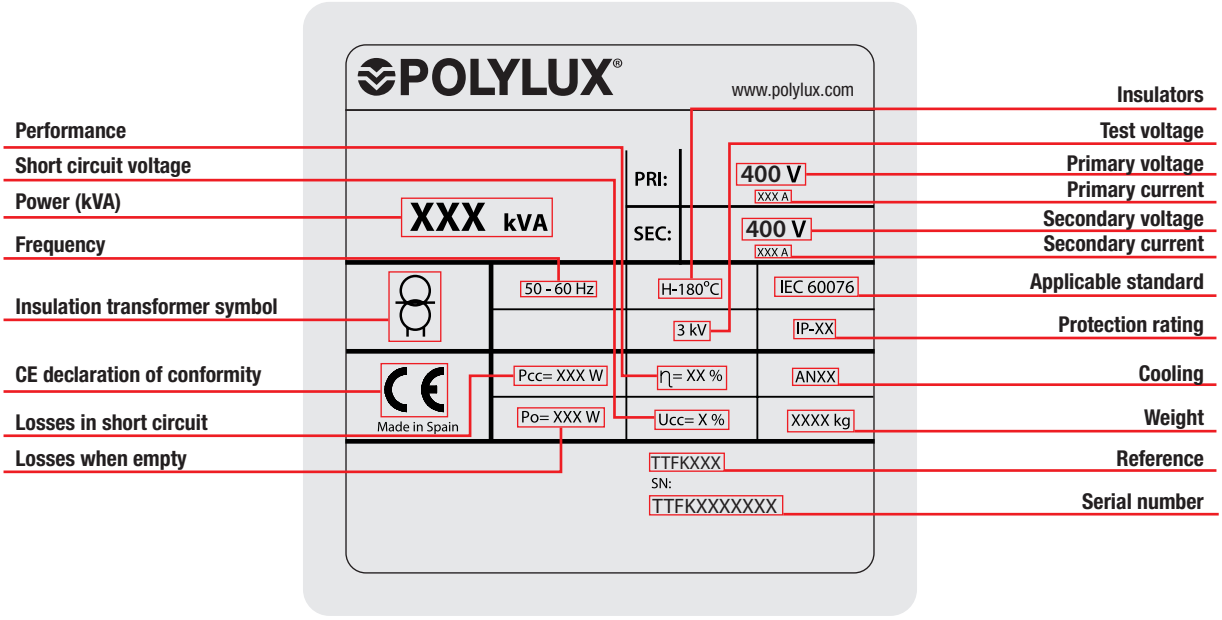
Insulation for harmonic three-phase networks · Input **400 V** · Output **400 V** + N

Feature plate structure

Label up to 31,5 kVA:



Label from 40 kVA:



CD SERIES

For office installations

Definition and applications

The CD series are harmonic compensators designed for installation in offices.
They provide considerable energy savings, reducing the power demand in the installation and transient current peaks, thus lengthening the service life of the connected appliances.

Manufacturing characteristics

- All the compensators are dipped in anti-flash varnish and then compacted in the furnace. This process increases the insulation grade, reduces noise and provides anti-moisture, waterproofed protection.
- Option of manufacturing C25D-180º for 180º dephasing of non-homopolar harmonics.
- Cable outlet with cable gland
- Hoisting elements included.
- All the compensators are checked automatically one by one and the compliance report is created in accordance with the respective standard.

Technical features - standard model

Standard voltage	**400 V**
Standard frequency	**50-60 Hz**
Insulators	**Class H - 180 ºC**
Temperature rise	**C10D - Class F - 155 ºC** **C20D - Class F - 155 ºC ≤ C20D160** **- Class H - 180 ºC ≥C20D200** **C22D - Class F - 155 ºC ≤ C22D20** **- Class H - 180 ºC ≥C22D25** **C25D - Class F - 155 ºC ≤ C25D20** **- Class H - 180 ºC ≥C25D25** **C30D - Class F - 155 ºC ≤ C30D20** **- Class H - 180 ºC ≥C30D25** *More information in Technical Appendix (T.A.1)
Windings	**Class HC-200 ºC**
Class	**I**
Altitude	**1000 m**
Enclosure colour	**RAL 7035**
IP rating	**IP23**
IK rating	**IK08**
Paint class (ISO 12944)	**C3**
Room temperature	**45 ºC**
Standards	**IEC/EN/UNE-EN 60076 I 61000-3-2/4, CE y IEE 519, CE**
Test voltage	**3 kV (1 min, 50 Hz)**
Operation	**Continuous**
Cooling	**ANAN**

Connection

Configuration	**With just one C25D-0 or C25D-180**	**Combination of two C25D-0 and C25D-180**	**Single C30D**
Filtering from load	3rd, 9th and 15th	3rd, 5th, 7th, 9th, 15th, 17th and 19th	3rd, 5th, 7th, 9th, 15th, 17th and 19th
Phase current reduction	15%	45%	45%
THDI reduction	45%	85%	85%
THDV reduction	40%	65%	85%

CF SERIES

For industrial installations · For non-homopolar harmonics

Definition and applications

The CF series are non-homopolar harmonic compensators designed for industrial installations.
The C10F compensators are specially designed for heavy industry where the presence of homopolar harmonics is usually negligible and problems arise due to harmonics of the 5th, 7th, 17th, 19th orders and others.
Along with line inductances, they are successful in reducing phase currents of up to 35% and a reduction in current distortion and voltage of up to 85%.

Manufacturing characteristics

- All the compensators are dipped in anti-flash varnish and then compacted in the furnace. This process increases the insulation grade, reduces noise and provides anti-moisture, waterproofed protection.
- Cable outlet with cable gland
- Hoisting elements included.
- All the compensators are checked automatically one by one and the compliance report is created in accordance with the respective standard.

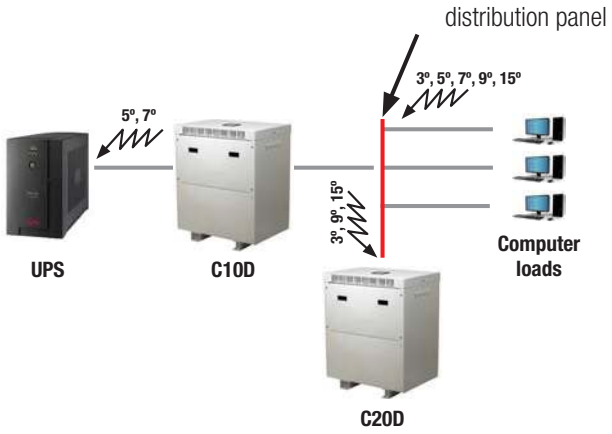
Office installation solutions

Solution 1

Filtering of 3º, 9º and 15º harmonics.
C10D + C20D compensator

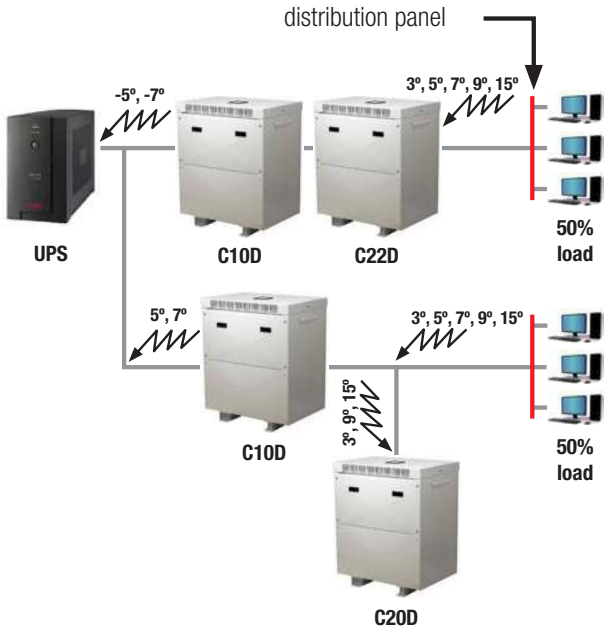


The 20D Compensator has a very good cost-filter ratio. It reduces homopolar harmonics (3rd, 9th, 15th) thus eliminating the main problem in office installations which is overload in the neutral conductor and a high neutral-ground voltage.
The C20D Compensators must be installed together with the C10D Impedance Adapter to obtain the best filtering.
Filtering obtained:

Reduction of neutral current and neutral-ground voltage up to	75%
Reduction of phase current up to	15%
Reduction of voltage distortion and current up to	45%
Power factor obtained up to	0.80

Solution 2

Filtering of harmonics of the 3º, 5º, 7º, 9º, 15º,17º and 19º orders
C10D + C20D and C10D + C22D Compensator

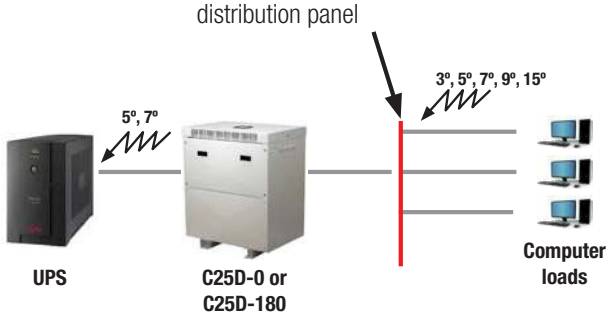


The C22D Compensator provides high filtering of 3rd, 5th, 7th, 9th, 15th, 17th and 19th harmonics. This solves all the harmonics problems in the installation. It is used in combination with the C20D + C10D model. Each one supplies 50% of the load to be filtered.
The C20D and C22D Compensators must be installed with the C10D Impedance Adapters for optimum filtering.
Filtering obtained:

Reduction of neutral current and neutral-ground voltage up to	80 %
Reduction of phase current up to	40 %
Reduction of voltage distortion and current up to	75 %
Power factor obtained up to	0.95

Solution 3

Filtering of harmonics with galvanic isolation of 3º, 9º and 15º
C25D Compensator



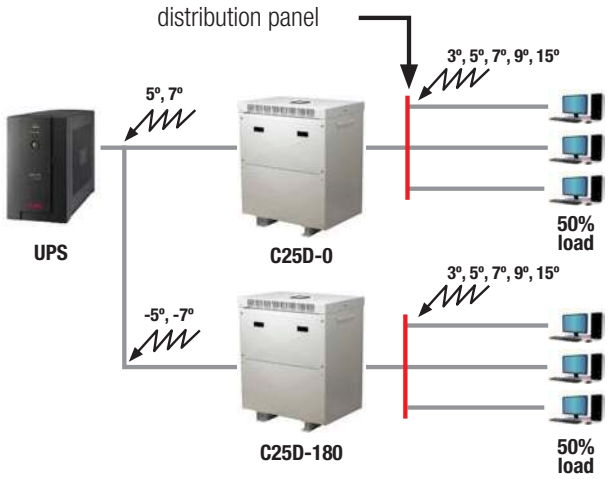
The C25D Compensator completely eliminates all homopolar harmonics (3rd, 9th, 15th), preventing surge current in neutral and high neutral-ground voltages produced by harmonics.
As it is a Compensator with galvanic isolation, it is the perfect solution in cases of high third harmonic voltages. It also has the following advantages: reduction of electromagnetic perturbations from the network, offers the possibility of changing the voltage between input and output and permits the use of independent ground circuits as the neutral is isolated from the network.
Filtering obtained:

Reduction of neutral current and neutral-ground voltage up to	90%
Reduction of phase current up to	15%
Reduction of current distortion up to	45%
Reduction of voltage distortion up to	40%
Power factor obtained up to	0.80

Office installation solutions

Solution 4

Filtering of harmonics with galvanic separation 3º, 5º, 7º, 9º, 15º, 17º and 19º
C25D Compensator

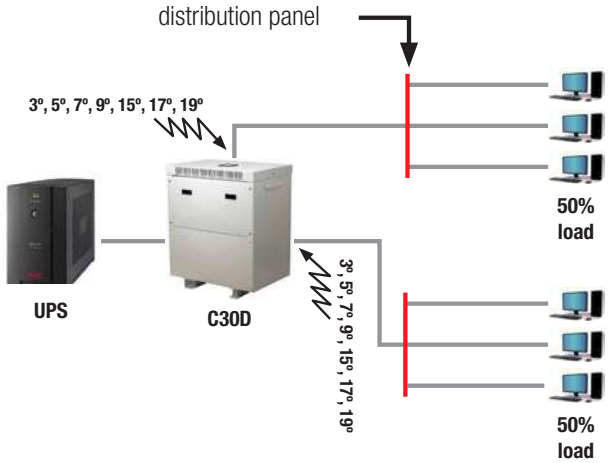


The C25D Compensator has two variants, depending on the dephase of the 5th and 7th harmonics. They are 0º and 180º. Combining their use, it is possible to eliminate 3rd, 5th, 7th, 9th, 15th, 17th and 19th harmonics.
Filtering obtained by combining the 0º and 180º variants:

Reduction of neutral current and neutral-ground voltage up to	90%
Reduction of phase current up to	45 %
Reduction of voltage distortion and current up to	85 %
Power factor obtained up to	0.96

Solution 5

Filtering of harmonics with galvanic separation 3º, 5º, 7º, 9º, 15º, 17º and 19º
C30D Compensator



The C30D Compensator obtains the highest filtering in office installations. It eliminates 3rd, 5th, 7th, 9th, 15th, 17th and19th harmonics and has additional advantages such as reducing electromagnetic perturbations coming from the network, permitting changes in voltage between input and output and making it possible to use independent ground circuits.
Filtering obtained:

Reduction of neutral current and neutral-ground voltage up to	90%
Reduction of phase current up to	45 %
Reduction of voltage distortion and current up to	85 %
Power factor obtained up to	0.96

CE

Solutions for industrial installations

Solution 1

Optimum filtering of 3º, 5º, 7º, 9º, 15º, 17º and 19º harmonics.
C10F Compensator

The C10F Compensator is used in cases where very high filtering is required. Its operation is based on installing a C10F unit supplying 50% of the load and the other 50% is direct. To ensure correct filtering, it is advisable to install it together with RTL or RTLX line inductances, particularly with converters with powers over 5 kVA.
Filtering obtained:

	C10F	C10F + RTL
Reduction of phase current up to	20%	35%
Reduction of voltage distortion and current up to	60%	85%
Power factor obtained up to	0.95	0.98

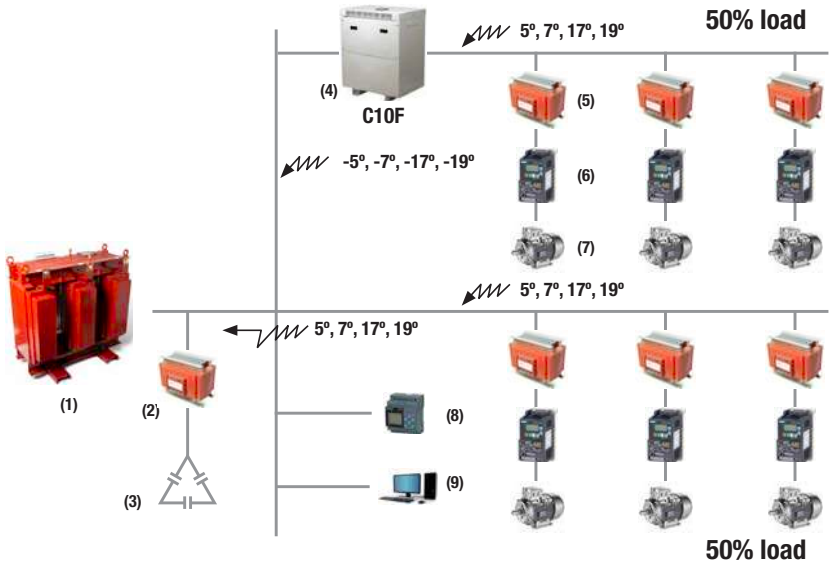
(6) Frequency variator
(7) Motor
(8) PLC
(9) Computer



Solution 2

High filtering of 5º, 7º, 17º and 19º harmonics and galvanic isolation of load.
C20F Compensator

The C20F Compensator attains the highest level of protection in industrial installations. It obtains a high filtering of harmonics as well as the galvanic isolation of the load. It has two outputs, each one supplying 50% of the load.
To ensure correct filtering, it is advisable to install it together with RTL or RTLX line inductances, particularly with converters with powers over 5 kVA.
Filtering obtained:

	C20F	C20F + RTL
Reduction of phase current up to	20%	35%
Reduction of voltage distortion and current up to	60%	85%
Power factor obtained up to	0.95	0.98

QR SERIES

Encapsulated for harmonic filtering in single-phase lines · Network **220 V - 260 V**

NEW head design

- Increased wiring insulation.
- Clearer features.
- Easier connection.
- More uniform, compact and robust design.

Definition and applications

The QR series are inductances for harmonic filtering in low power single-phase installations.

Specific applications:

- Reduction of current harmonics generated by electronic equipment, reducing current consumption and improving the power factor.
- Reduction of the crest factor of the current waveform, lengthening the service life of the equipment.
- Attenuation of micro power cuts produced by the converter that cause the malfunction of computers, automatons and other susceptible equipment.

Manufacturing characteristics

All the versions have the following features in common:

- Encapsulated in flame retardant resin.
- Option of mounting on **DIN rail up to 16 A**, rest with screws.
- IP20 enclosure, V-0 flame-retardant polymer box that complies with UL94.
- **All the parts of these inductances are live and encapulsulated in resin, and are thus specially indicated for operating in damp, saline or corrosive environments.**
- **They have greater resistance to current surges and transient harmonics.**
- **Greater mechanical resistance to vibrations and undesirable movements.**
- Safety Class I, convertible to Class II.
- All the inductances are checked automatically one by one and the compliance report is created based on the respective standard.

Technical features - standard model

Current	**2.5 A to 31.5 A**
Insulators	**Class H - 180 ºC**

Mounting	**Mounting on DIN 46277/3 rail (up to 16 A) or with screws**
Standards	**UNE-EN 60289, CE**
Protection	**Class I**
Operation	**Continuous**
Test voltage	**3 kV (1 min., 50 Hz) between coil and ground**

Definition and applications

The R series are inductances for harmonic filtering in low power single-phase installations.
Specific applications:

- Reduction of current harmonics generated by electronic equipment, reducing current consumption and improving the power factor.
- Reduction of the crest factor of the current waveform, lengthening the service life of the equipment.
- Attenuation of micro power cuts produced by the converter that cause the malfunction of computers, automatons and other susceptible equipment.

Manufacturing characteristics

All the versions have the following features in common:

- Encapsulated in flame retardant resin.
- Connection terminals made of copper, welded and inserted in blocks to prevent hazards caused by expansion that may lead to poor connection.
- Option of mounting on **DIN rail up to 16 A**, rest with screws.
- All the parts of these inductances are live and encapsulated in resin, which makes them especially suitable for use in damp, saline and corrosive environments.
- They have greater resistance to current surges and transient harmonics.
- Greater mechanical resistance to vibrations and undesirable movements.
- Safety Class I.
- All the inductances are checked automatically one by one and the compliance report is created based on the respective standard.

Feature plate structure

RTOX SERIES

For harmonic filtering in three-phase lines at the converter output · Network **400 V**

Definition and applications

The RTOX series are inductances for harmonic filtering in three-phase lines at the converter output.
Specific applications:

- Attenuation of voltage peaks at the converter output, protecting the dielectric elements of the motor against premature damage caused by this.
- Reduction of the reflection effect due to the length of the cable between the converter and the motor. This reflection effect amplifies the voltage values in the motor terminals.

Manufacturing characteristics

All the versions have the following features in common:

- Dual protection, resin + anti-flash varnish.
- Thermal protection against overtemperature included.
- Safety Class I.
- **UL certification.** FILE: E532753 - Construction only.
- All the inductances are checked automatically one by one and the compliance report is created based on the respective standard.

RTOX SERIES

For harmonic filtering in three-phase lines at the converter output · Network **400 V**

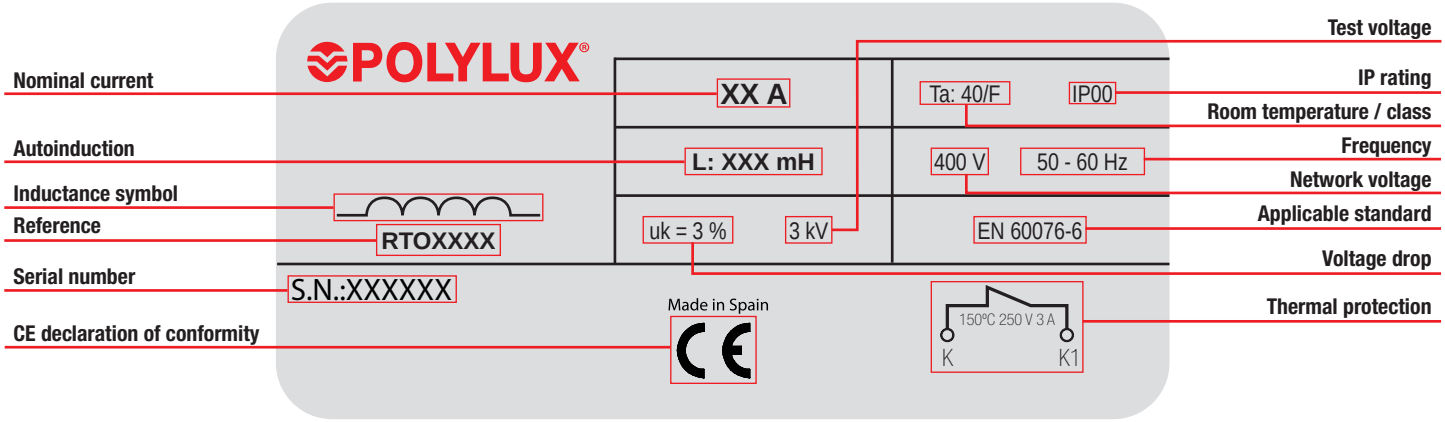
Feature plate structure



FTOX SERIES

With a three-phase converter output filter · For **converter-motor distrances > 30 m** · **Network 400 V**

Definition and applications

The FTOX series are inductances with a capacitator filter for harmonic filtering in three-phase installations at the converter output.
Specific applications:

- Attenuation of voltage peaks at the converter output, protecting the dielectric elements of the motor against premature damage caused by this.
- Reduction of the reflection effect due to the length of the cable between the converter and the motor. This reflection effect amplifies the voltage values in the motor terminals.
- It is advisable to use these inductances for lengths of more than 30 m between the converter and motor.

Manufacturing characteristics

All the versions have the following features in common:

- Dual protection, resin + anti-flash varnish.
- Thermal protection against overtemperature included.
- Safety Class I.
- **UL certification.** FILE: E532753 - Construction only.
- All the inductances are checked automatically one by one and the compliance report is created based on the respective standard.

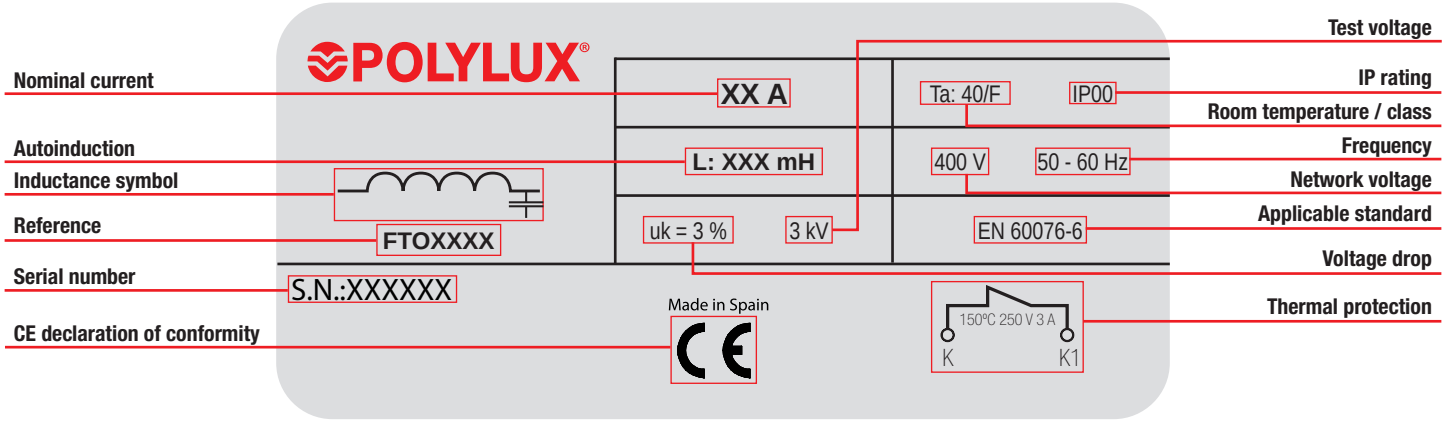
Feature plate structure



RTFX SERIES

Three-phase rejection inductances for capacitator batteries, p = 7% · Network 400 V a 50 Hz

Definition and applications

The RTFX series are three-phase rejection inductances for capacitator batteries.
Specific applications:

- They prevent resonances between the power transformer inductance and the capacitance of the capacitator battery.
- They eliminate surge currents and overvoltage in the transformer and in the capacitator battery.
- They protect the condensers against harmonics, preventing their premature ageing.
- They limit the capacitator battery connection peaks, thus increasing their service life and reducing micro power cuts in the supply voltage.

Manufacturing characteristics

All the versions have the following features in common:

- Dual protection, resin + anti-flash varnish.
- Thermal protection against overtemperature included.
- Safety Class I.
- Option of manufacturing with different filter factors, p = 5.67% (RTF5X, capacitator voltage 440 V to 50 Hz and resonsance frequency 210 Hz) and p=14% (RTF14X, voltage 460 V to 50 Hz and resonance frequency 135 Hz); both factors cover the 5 kVar to 100 kVar power range.
- **UL certification.** FILE: E532753 - Construction only.
- All the inductances are checked automatically one by one and the compliance report is created based on the respective standard.

Definition and applications

The PXR transformers are specially designed to adapt voltages in manoeuvre and control, in both household and industrial environments.
They are mainly used to ensure the galvanic isolation of installations for safety reasons and to create neutrals referenced to ground.
They can also be used in installations that require safety voltages (<50V).
The ±15% adjustment facilitates the adaptation of the output depending on the voltage drop in the line.

Manufacturing characteristics

All the versions have the following features in common:

- Anti-flash dip varnishing. Ensures greater compactation, insulation and noise elimination.
- Adjustment to adapt the primary voltage, with the possibility of correcting the voltage drop in the line.
- Connection terminals made of copper, welded and inserted in blocks to prevent hazards caused by expansion that may lead to poor connection.
- Option of mounting on **DIN rail up to 250 VA**.
- **UL certification.** FILE: E532753 - Construction only.

Definition and applications

The TK transformers are mainly used to isolate circuits and increase or reduce the output voltage if this is requested as a special assembly.
They are also used to change the installation neutral system for changing from a two-phase to a single-phase network or vice versa. (This case means creating an artificial neural).
In installations with a certain amount of electrical noise, the TK series helps improve the electrical network quality in secondary.
For example: Supplying equipment that requires the neutral reference and has only two phases. The ability to insulation more sensitive systems in a control panel. Increasing catenary voltage in the railway sector and reducing it to supply track control panels.

Manufacturing characteristics

The TK series are perfect for supplying continuous power to industrial, tertiary or residential installations or machinery. They are the POYLUX single-phase range with the highest power.
Equipment with four different finishes based on sealing.
All the versions have the following features in common:

- Anti-flash dip varnishing. Ensures greater compactation, insulation and noise elimination.
- Welded copper connection end sleeves inserted into the terminal block to prevent hazards caused by expansion that leads to poor connection.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

TKX

· IP00 protection rating.
· Power from 3.15 kVA to 50 kVA.
· Total impregnated in anti-flash varnish.
· Hoisting elements included.
· **UL certification.** FILE: E532753 - Construction only.

TKW

· IP23 rating (IK08).
· Power from 3.15 kVA to 50 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Hoisting elements included.
· Detachable top and front cover.
· Cable outlet with cable gland.
· **UL certification.**

TKZ

· IP54 rating up to 20 kVA / IP65 from 25 kVA (IK10).
· Power from 3.15 kVA to 50 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Hoisting elements included.
· Detachable top cover.
· Stuffing box cover for cable input depending on installation needs.
· With silentblock.
· **UL certification.**

TKE

· **Encapsulated in flame retardant resin.**
· IP20 protection rating up to 3,15 kVA / IP00 from 4 kVA.
· Power from 3.15 kVA to 50 kVA.
· Protection against damp, saline and corrosive environments.
· Greater resistance to surge currents.
· Greater resistance to transient harmonics.
· Greater mechanical resistance to undesirable vibrations.
· Uniform heat dissipation.
· Hoisting elements included.

TK SERIES

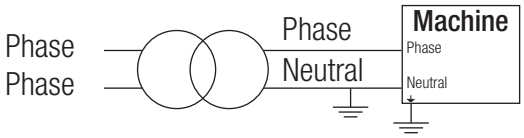
Creating neutral

To perform this procedure: use a single-phase transformer with the appropriate power and connect it to primary with both phases and create a bridge at the output between one of the output phases and ground. This line will act as neutral from this moment.



TK5IN SERIES

Isolation · Input **230 V** · Output **230 V**

Definition and applications

The TK5IN transformers are mainly used to isolate circuits and increase or reduce the output voltage if this is requested as a special assembly.
They are also used to change the installation neutral system for changing from a two-phase (PH + PH) to a single-phase network (PH + N) (this case means creating an artificial neural) or vice versa.
In installations with a certain amount of electrical noise, the TK5IN series helps improve the electrical network quality in secondary.
For example: Supplying the electronics of equipment such as EV chargers, boilers, aerothermal or biomass equipment, which require the generation of grounded neutral to supply the equipment with Phase + Neutral.

Manufacturing characteristics

The TK5IN series are perfect for supplying continuous power to machinery residential installations or machinery. The transformers of this series are characterised by their:

- Low inrush (3 or 5In)
- Low no-load losses
- High performance >95%
- Quiet operation (noise level <40dB)
- Input protections with B or C and rated current curves

Equipment with three different finishes based on sealing.
All the versions have the following features in common:

- Anti-flash dip varnishing. Ensures greater compactation, insulation and noise elimination <40dB.
- Welded copper connection end sleeves inserted into the terminal block to prevent hazards caused by expansion that leads to poor connection.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

TK5INX

· IP00 protection rating.
· Power from 2 kVA to 40 kVA.
· Total impregnated in anti-flash varnish.
· Hoisting elements included.
· **UL certification.** FILE: E532753 - Construction only.

TK5INW

· IP23 rating (IK08).
· Power from 2 kVA to 40 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Hoisting elements included.
· Detachable top and front cover.
· Cable outlet with cable gland.
· **UL certification.**

TK5INZ

· IP65 rating up to 16 kVA / IP54 from 20 kVA (IK10).
· Power from 2 kVA to 40 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Hoisting elements included.
· Detachable top cover.
· Stuffing box cover for cable input depending on installation needs.
· With silentblock.
· **UL certification.**

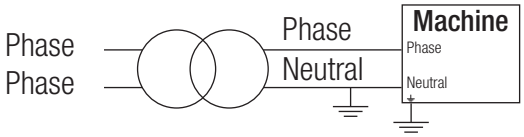
Creating neutral

To perform this procedure: use a single-phase transformer with the appropriate power and connect it to primary with both phases and create a bridge at the output between one of the output phases and ground. This line will act as neutral from this moment.



TT SERIES

Isolation · Input **400 V** · Output **400 V** +N

Definition and applications

Our TT series are three-phase isolation transformers designed for continuous operation at maximum output 365 days a year. This guarantees power is supplied to the installations or equipment they supply.

Applications:

- The main application of the TT transformers is the isolation of circuits, with the possibility of increasing or reducing the voltage.
- Reducing voltage drops in installations with long cable lengths. With the installation of a step-up transformer and a reducer transformer.
- In installations with a certain level of electrical noise, the TT series helps improve the electrical network quality in secondary.
- Changing the neutral system of an installation.

Manufacturing characteristics

- All the transformers are dipped in anti-flash varnish and then compacted in the furnace. This process increases the insulation grade, reduces noise and provides anti-moisture, waterproofed protection.
- The high power transformers are manufactured with format cores and low loss properties, thus contributing to improving performance.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

Recommendation for selecting the best transformer in terms of use and installation location

Main compliance properties based on model	 Encapsulated in resin	 IP00 Air	 Oil
Non-flammable	✓	✗	✗
Self-extinguishing.	✓	✗	✗
No safety measures against the risk of explosion	✓	✓	✗
No special installation conditions	✓	✓	✗
Protected against damp, saline and corrosive environments	✓	✗	✓
Greater resistance to overload and transient harmonics	✓	✗	✗
No maintenance	✓	✓	✗
No risk of contamination	✓	✓	✗

Considerations

- The IP00 (air) can be installed in control cabinets with all the necessary protections and in dry places, which is more economical.
- Both models (encapsulated and IP00) can be protected with metallic enclosures up to IP65.
- In addition, the **ECOLOGICAL** transformer can be manufactured in both models, with different properties such as lower consumption, thus achieving fast amortisation.
- The transformer with the best properties is the transformer encapsulated in fire retardant resin.

TTX

· IP00 protection rating.
· Power from 0.63 kVA to 1000 kVA.
· Total impregnated in anti-flash varnish.
· Hoisting elements included.
· **UL certification.** FILE: E532753 - Construction only.

TTW

· IP23 rating (IK08).
· Power from 0.63 kVA to 1000 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Hoisting elements included.
· Detachable top and front cover.
· Cable outlet with cable gland.
· **UL certification.**

TTZ

· IP65 rating up to 31,5 kVA / IP54 from 40 kVA (IK10).
· Power from 0.63 kVA to 1000 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Hoisting elements included.
· Detachable top cover.
· Stuffing box cover for cable input depending on installation needs.
· With silentblock.
· **UL certification.**

TTE

· **Encapsulated in flame retardant resin.**
· IP20 protection rating up to 2,5 kVA / IP00 from 3,15 kVA.
· Power from 0.40 kVA to 400 kVA.
· Protection against damp, saline and corrosive environments.
· Greater resistance to surge currents.
· Greater resistance to transient harmonics.
· Greater mechanical resistance to undesirable vibrations.
· Uniform heat dissipation.

TTU SERIES

Isolation · Input **230 V** · Output **400 V** + N

Definition and applications

Our TTU series are three-phase isolation transformers designed for continuous operation at maximum output 365 days a year. This guarantees power is supplied to the installations or equipment they supply.

Applications:

- The main application of the TTU transformers is the isolation of circuits, by raising the voltage from 230V up to 400V.
- In installations with a certain level of electrical noise, the TTU series helps improve the electrical network quality in secondary.
- Changing the neutral system of an installation.

Manufacturing characteristics

- All the transformers are dipped in anti-flash varnish and then compacted in the furnace. This process increases the insulation grade, reduces noise and provides anti-moisture, waterproofed protection
- The high power transformers are manufactured with format cores and low loss properties, thus contributing to improving performance.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

Recommendation for selecting the best transformer in terms of use and installation location

Main compliance properties based on model	 Encapsulated in resin	 IP00 Air	 Oil
Non-flammable	✓	✗	✗
Self-extinguishing.	✓	✗	✗
No safety measures against the risk of explosion	✓	✓	✗
No special installation conditions	✓	✓	✗
Protected against damp, saline and corrosive environments	✓	✗	✓
Greater resistance to overload and transient harmonics	✓	✗	✗
No maintenance	✓	✓	✗
No risk of contamination	✓	✓	✗

Considerations

- The IP00 (air) can be installed in control cabinets with all the necessary protections and in dry places, which is more economical.
- Both models (encapsulated and IP00) can be protected with metallic enclosures up to IP65.
- In addition, the **ECOLOGICAL** transformer can be manufactured in both models, with different properties such as lower consumption, thus achieving fast amortisation.
- The transformer with the best properties is the transformer encapsulated in fire retardant resin.

TTUX

· IP00 protection rating.
· Power from 0.63 kVA to 1000 kVA.
· Total impregnated in anti-flash varnish.
· Hoisting elements included.
· **UL certification.** FILE: E532753 - Construction only.

TTUW

· IP23 rating (IK08).
· Power from 0.63 kVA to 1000 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Hoisting elements included.
· Detachable top and front cover.
· Cable outlet with cable gland.
· **UL certification.**

TTUZ

· IP65 rating up to 31,5 kVA / IP54 from 40 kVA (IK10).
· Power from 0.63 kVA to 1000 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Hoisting elements included.
· Detachable top cover.
· Stuffing box cover for cable input depending on installation needs.
· With silentblock.
· **UL certification.**

TTD SERIES

Isolation · Input **400 V** · Output **230 V** + N

Definition and applications

Our TTD series are three-phase isolation transformers designed for continuous operation at maximum output 365 days a year. This guarantees power is supplied to the installations or equipment they supply.

Applications:

- The main application of the TT transformers is the isolation of circuits, by reducing the voltage from 400V up to 230V.
- In installations with a certain level of electrical noise, the TTU series helps improve the electrical network quality in secondary.
- Changing the neutral system of an installation.

Manufacturing characteristics

- All the transformers are dipped in anti-flash varnish and then compacted in the furnace. This process increases the insulation grade, reduces noise and provides anti-moisture, waterproofed protection
- The high power transformers are manufactured with format cores and low loss properties, thus contributing to improving performance.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

Recommendation for selecting the best transformer in terms of use and installation location

Main compliance properties based on model	 Encapsulated in resin	 IP00 Air	 Oil
Non-flammable	✓	✗	✗
Self-extinguishing.	✓	✗	✗
No safety measures against the risk of explosion	✓	✓	✗
No special installation conditions	✓	✓	✗
Protected against damp, saline and corrosive environments	✓	✗	✓
Greater resistance to overload and transient harmonics	✓	✗	✗
No maintenance	✓	✓	✗
No risk of contamination	✓	✓	✗

Considerations

- The IP00 (air) can be installed in control cabinets with all the necessary protections and in dry places, which is more economical.
- Both models (encapsulated and IP00) can be protected with metallic enclosures up to IP65.
- In addition, the **ECOLOGICAL** transformer can be manufactured in both models, with different properties such as lower consumption, thus achieving fast amortisation.
- The transformer with the best properties is the transformer encapsulated in fire retardant resin.

TTDX

· IP00 protection rating.
· Power from 0.63 kVA to 1000 kVA.
· Total impregnated in anti-flash varnish.
· Hoisting elements included.
· **UL certification.** FILE: E532753 - Construction only.

TTDW

· IP23 rating (IK08).
· Power from 0.63 kVA to 1000 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Hoisting elements included.
· Detachable top and front cover.
· Cable outlet with cable gland.
· **UL certification.**

TTDZ

· IP65 rating up to 31,5 kVA / IP54 from 40 kVA (IK10).
· Power from 0.63 kVA to 1000 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Hoisting elements included.
· Detachable top cover.
· Stuffing box cover for cable input depending on installation needs.
· With silentblock.
· **UL certification.**

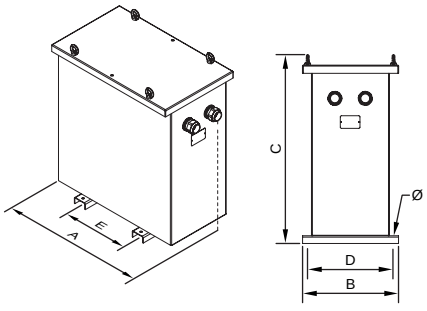
TTDZ IP54 / 65



TTD SERIES

Isolation · Input **400 V** · Output **230 V** + N

On-request manufacturing options (please see prices)

Power	**From 0.15 kVA to 1000 kVA**
Voltage	**From 1 V to 12 kV**
Windings	**Copper or aluminium**
Frequency	**From 50 Hz to 400 Hz**
Connection unit	**Yyn0, Dyn11, Dd0, Dy1, Dyn5, YNd1/5/11... (See Technical Appendix T.A.2)**
IP rating	**IP00, IP20, IP23, IP31, IP42, IP54, IP55 and IP65**
IK rating	**IK08 and IK10**
Room temperature	**Up to 60 ºC**
Locks	**Screw, key**
Test voltage	**Up to 28 kV**
Short circuit voltage	**From 2% to 9%**
Losses	**Low losses, ecological**
Operation	**Intermittent, continuous**
Cooling	**Natural, forced ventilation**
Electrostatic shield	**Up to three shields**
Safety class	**I, II**
Altitude	**Up to 4000 m**
Protections	**In both primary and secondary (figure 1)**
Temperature sensors	**PT100 (figure 2), PTC (figure 3) or bimetallic**
Temperature control	**Temperature control station (4xPT100) (figure 4), PTC thermal relays (3xPTC / 6xPTC)**
Network analyser	**(Figure 5)**
Anti condensation system	**Higrostat**
Heating system	**Heating elements**
External protection	**Anti-flash varnish, resin encapsulated, metal or stainless steel enclosure**
Transportation and hoisting	**Wheels (figure 6), lifting points**
Paint	**C3, C4, C5, different RAL**
Feature plate	**High generation polymer or stainless steel (figure 7)**
Anti vibration system	**Silentblock**
Adjustment	**-10%; -7.5%; -5%; -2.5%; +2.5%; +5%; +7.5%; +10% With bridges (figure 8) or selector (figure 9)**
Certified	**CE, DNV-GL, BV, UL (insulation) and POLYLUX laboratory**
Climate class / environment / fire	**Up to C2-E2-F1**

TTF SERIES

Input **800 V** +N · Output **400 V** +N

Definition and applications

Definition and applications

Our TTF series are three-phase isolation transformers designed for continuous operation at maximum output 365 days a year. This guarantees power is supplied to the installations or equipment they supply.

Applications:

- The main use of TTF transformers is for the galvanic isolation of three-phase solar installations.
- In installations with a certain level of electrical noise, the TTF series helps improve the electrical network quality in secondary.
- Generation of ground-referenced neutrals.

Manufacturing characteristics

- All the transformers are dipped in anti-flash varnish and then compacted in the furnace. This process increases the insulation grade, reduces noise and provides anti-moisture, waterproofed protection
- The high power transformers are manufactured with format cores and low loss properties, thus contributing to improving performance.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

Recommendation for selecting the best transformer in terms of use and installation location

Main compliance properties based on model	 Encapsulated in resin	 IP00 Air	 Oil
Non-flammable	✓	✗	✗
Self-extinguishing.	✓	✗	✗
No safety measures against the risk of explosion	✓	✓	✗
No special installation conditions	✓	✓	✗
Protected against damp, saline and corrosive environments	✓	✗	✓
Greater resistance to overload and transient harmonics	✓	✗	✗
No maintenance	✓	✓	✗
No risk of contamination	✓	✓	✗

Considerations

- The IP00 (air) can be installed in control cabinets with all the necessary protections and in dry places, which is more economical.
- Both models (encapsulated and IP00) can be protected with metallic enclosures up to IP65.
- In addition, the **ECOLOGICAL** transformer can be manufactured in both models, with different properties such as lower consumption, thus achieving fast amortisation.
- The transformer with the best properties is the transformer encapsulated in fire retardant resin.

TTFX

· IP00 protection rating.
· Power from 0.63 kVA to 1000 kVA.
· Total impregnated in anti-flash varnish.
· Hoisting elements included.

TTFW

· IP23 rating (IK08).
· Power from 0.63 kVA to 1000 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Hoisting elements included.
· Detachable top and front cover.
· Cable outlet with cable gland.

TTFZ

· IP65 hasta 31,5 kVA IP54 desde 40 kVA (IK10).
· Power from 0.63 kVA to 1000 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Hoisting elements included.
· Detachable top cover.
· Stuffing box cover for cable input depending on installation needs.
· With silentblock.

TTF SERIES

Input **800 V** +N · Output **400 V** +N

Technical features - standard model

Rating	**0.63 kVA a 1000 kVA**
Standard voltage	**Input 800 V and N // Output 400 V and N.**
Standard frequency	**50-60 Hz**
Connection unit	**YNyn0**
Insulators	**Class H - 180 ºC**
Temperature rise	**Class F - 155 ºC ≤ 31.5 kVA (25 kVA TTFZ)** **Class H - 180 ºC ≥ 40 kVA (31.5 kVA TTFZ)** *More information in Technical Appendix (T.A.1)
Windings	**Class HC-200 ºC**
Safety class	**I**
Altitude	**1000 m**
Enclosure colour	**RAL 7035**
IP rating	**IP00 (TTFX)** **IP23 (TTFW)** **IP65 up to 31,5 kVA IP54 from 40 kVA (TTFZ))**
IK rating	**IK08 (TTFW) // IK10 (TTFZ)**
Paint class (ISO 12944)	**C3 (TTFW) // C4 (TTFZ)**
Room temperature	**45 ºC**
Standards	**IEC/EN 61558, CE up to 31.5 kVA** **IEC/EN 60076, CE from 40 kVA**
Test voltage	**3 kV (1 min, 50 Hz)**
Inrush	**< 12 In**
Ucc	**≤ 4 %**
K factor	**4**
Operation	**Continuous**
Cooling	**AN (TTFX) - ANAN (TTFW / TTFZ IP65) - ANAF (≥500kVA TTFW / TTFZ IP54)**
Hoisting accessories	**Hoisting elements included**

On-request manufacturing options (please see prices)

Power	**From 0.15 kVA to 1000 kVA**
Voltage	**From 1 V to 12 kV**
Windings	**Copper or aluminium**
Frequency	**From 50 Hz to 400 Hz**
Connection unit	**Yyn0, Dyn11, Dd0, Dy1, Dyn5, YNd1/5/11... (See Technical Appendix T.A.2)**
IP rating	**IP00, IP20, IP23, IP31, IP42, IP54, IP55 and IP65**
IK rating	**IK08 and IK10**
Room temperature	**Up to 60 ºC**
Locks	**Screw, key**
Test voltage	**Up to 28 kV**
Short circuit voltage	**From 2% to 9%**
Losses	**Low losses, ecological**
Operation	**Intermittent, continuous**
Cooling	**Natural, forced ventilation**
Electrostatic shield	**Up to three shields**
Safety class	**I, II**
Altitude	**Up to 4000 m**
Protections	**In both primary and secondary (figure 1)**
Temperature sensors	**PT100 (figure 2), PTC (figure 3) or bimetallic**
Temperature control	**Temperature control station (4xPT100) (figure 4), PTC thermal relays (3xPTC / 6xPTC)**
Network analyser	**(Figure 5)**
Anti condensation system	**Higrostat**
Heating system	**Heating elements**
External protection	**Anti-flash varnish, resin encapsulated, metal or stainless steel enclosure**
Transportation and hoisting	**Wheels (figure 6), lifting points**
Paint	**C3, C4, C5, different RAL**
Feature plate	**High generation polymer or stainless steel (figure 7)**
Anti vibration system	**Silentblock**
Adjustment	**-10%; -7.5%; -5%; -2.5%; +2.5%; +5%; +7.5%; +10% With bridges (figure 8) or selector (figure 9)**
Certified	**CE, DNV-GL, BV, UL (insulation) and POLYLUX laboratory**
Climate class / environment / fire	**Up to C2-E2-F1**

Isolation three-phase to single-phase · three-phase **input 400 V** · Single-phase **output 230 V**

Definition and applications

Transformers for applications in which there is very high single-phase consumption in an installation and the load is to be shared in a three-phase system to prevent important imbalances. It should be mentioned that due to the way in which they operate, this type of transformer does not achieve a totally balanced load in primary. The current in the central primary phase may be double the nominal current. It is advisable to use these transformers for powers higher than 5kVA as it is understood that in most industrial installations, for consumptions equal to or less than this power, it will not entail a considerable consumption load. For powers equal to or less than 5kVA, use the conventional single-phase "PD", "QD", "ND" or "TK" series transformers.

Manufacturing characteristics

- All the transformers are dipped in anti-flash varnish and then compacted in the furnace. This process increases the insulation grade, reduces noise and provides anti-moisture, waterproofed protection.
- The high power transformers are manufactured with format cores and low loss properties, thus contributing to improving performance.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

TTKX

· IP00 protection rating.
· Power from 1 kVA to 100 kVA.
· Total impregnated in anti-flash varnish.
· Hoisting elements included.
· **UL certification.** FILE: E532753 - Construction only.

TTKZ

· IP65 rating up to 16 kVA / IP54 from 20 kVA (IK10).
· Power from 1 kVA to 100 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Stuffing box cover for cable input depending on installation needs.
· Hoisting elements included.
· Detachable top cover.
· With silentblock.
· **UL certification.**

TTKW

· IP23 rating (IK08).
· Power from 1 kVA to 100 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Hoisting elements included.
· Detachable top and front cover.
· Cable outpet with cable gland.
· **UL certification.**

Technical features - standard model

Rating	**1 kVA to 100 kVA**

TTG SERIES

Ecological three-phase isolation · Input **400 V** · Output **400 V** + N

Definition and applications

Our TTG series are three-phase isolation transformers with low losses designed to operate continuously at maximum output.
Applications:

- Circuit isolation, with the possibility of increasing or reducing the voltage.
- Reducing voltage drops in installations with long cable lengths. With the installation of a step-up transformer and a reducer transformer.
- In installations with a certain level of electrical noise, the TTG series helps improve the electrical network quality in secondary.
- Changing the neutral system of an installation.
- In installations where energy savings is critical, or where a lower connection peak is required such as renewable energy plants or high energy efficiency installations.

Manufacturing characteristics

- All the transformers are dipped in anti-flash varnish and then compacted in the furnace. This process increases the insulation grade, reduces noise and provides anti-moisture, waterproofed protection.
- All the transformers are made to provide a high performance and lower losses than standard transformers. This high performance makes it possible to cut operating costs, providing great energy savings and thus helping to protect the environment.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

TTGX

· IP00 protection rating.
· Power from 10 kVA to 400 kVA.
· Total impregnated in anti-flash varnish.
· Hoisting elements included.
· **UL certification.** FILE: E532753 - Construction only.

TTGW

· IP23 rating (IK08).
· Power from 10 kVA to 400 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Cable outpet with cable gland.
· Hoisting elements included.
· Detachable top and front cover.
· **UL certification.**

TTGZ

· IP65 rating up to 40 kVA / IP54 from 50 kVA (IK10).
· Power from 10 kVA to 400 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Stuffing box cover for cable input depending on installation needs.
· Hoisting elements included.
· Detachable top cover.
· With silentblock.
· **UL certification.**

Technical features - standard model

Rating	**10 kVA to 400 kVA**
Standard voltage	**Input 400 V // Output 400 V and N.**
Standard frequency	**50-60 Hz**
Connection unit	**Yyn0**
Insulators	**Class H - 180 ºC**
Temperature rise	**Class F - 155 ºC ≤ 40 kVA** **Class H - 180 ºC ≥ 50 kVA** *More information in Technical Appendix (T.A.1)
Windings	**Class HC-200 ºC**
Class	**I**
Altitude	**1000 m**
Enclosure colour	**RAL 7035**
IP rating	**IP00 (TTGX)** **IP23 (TTGW)** **IP65 rating up to 40 kVA / IP54 from 50 kVA (TTGZ)**
IK rating	**IK08 (TTGW)** **IK10 (TTGZ)**
Paint class (ISO 12944)	**C3 (TTGW)** **C4 (TTGZ)**
Room temperature	**45 ºC**
Standards	**≤600V: US Standard: UL 5085-1 / UL 5085-2** **Canada Standard: CSA C22.2 N0 66.1-06 / CSA C22.2 N0 66.2-06** **≤750V: IEC/EN 61558, CE up to 31.5 kVA** **IEC/EN 60076, CE from 40 kVA**
Test voltage	**3 kV (1 min, 50 Hz)**
Inrush	**< 5 In**
Ucc	**≤ 2 %**
K factor	**4**
Operation	**Continuous**
Cooling	**AN (TTGX) - ANAN (TTGW / TTGZ IP65) - ANAF (TTGZ IP54)**

PAU SERIES

Reversible · For voltage changes **400 / 230 V**

Definition and applications

The PAU SERIES single-phase autotransformers have a robust, modern design and are perfect for working with continuous power to supply industrial, tertiary and residential installations and machinery. Due to its design, it has an IP20 rating that prevents direct electrical contact and protects windings perfectly.
This autotransformer can make voltage changes from 400 V to 230 V and from 230 V to 400 V or other voltages on request in single-phase installations.

Manufacturing characteristics

All the versions have the following features in common:

- Anti-flash dip varnishing. Ensures greater compactation, insulation and noise elimination.
- Option of installing on **DIN rail up to 630 VA**.
- Convertible from Class I to Class II (up to 6300 VA)
- LED indicator lamp.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

Up to 6300 VA

- Technical polymer box.
- UL 94 V-0 flame retardant material.
- Protective terminal cover to prevent direct contact.
- Ventilation ducts at the top and along the perimeter.
- Feature label with all the connection and protection instructions.

From 8000 VA

- Epoxy painted metal box resistant to all types of damp and corrosive atmospheres.
- Protective terminal cover to prevent direct contact.
- Ventilation ducts along the box perimeter.
- Feature label with all the connection and protection instructions.

NEW head design

- Increased wiring insulation.
- Clearer features.
- Easier connection.
- More uniform, compact and robust design.

Technical features - standard model

From 3150 VA.

- Completely encapsulated in flame retardant resin.
- Protective terminal cover to prevent direct contact.
- Feature label with all the connection and protection instructions.

NEW head design

- Increased wiring insulation.
- Clearer features.
- Easier connection.
- More uniform, compact and robust design.

Definition and applications

The QAU single-phase autotransformer series have a robust and modern design and are perfect for continuous operation in supplying industrial, tertiary or residential istallations and machinery. Due to its design, it has an IP20 rating that prevents direct electrical contact and protects windings perfectly.
This autotransformer can make voltage changes from 400 V to 230 V and from 230 V to 400 V or other voltages on request in single-phase installations.

Manufacturing characteristics

- Protected against indirect contacts.
- Convertible from Class I to Class II.
- LED indicator lamp included.
- Optional protective fuse.
- Mounted on **DIN rail (up to 200 VA)** or with screws.
- Option of special fabrications if the standard specification are inadequate.
- Encapsulated in flame retardant resin.
- Protection against damp, saline and corrosive environments.
- Greater mechanical resistance to vibrations, power surges and transient harmonics.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

AUT SERIES

Reversible · For voltage changes **400 V / 230 V**

Definition and applications

The AUT series are reversible three-phase autotransformers designed to operate continuously at maximum output.

Their main application is for changing voltages from 400 V to 230 V and from 230 V to 400 V or other voltages on request in three-phase installations.

Manufacturing characteristics

- All the autotransformers are dipped in anti-flash varnish and then compacted in the furnace. This process increases the insulation grade, reduces noise and provides anti-moisture, waterproofed protection.
- The high power autotransformers are made with format cores and low loss properties, thus contributing to increasing their performance.
- All the autotransformers are checked automatically one by one and the compliance report is created based on the respective standard.

AUTX

· IP00 protection rating.
· Power from 1 kVA to 1000 kVA.
· Total impregnated in anti-flash varnish.
· Hoisting elements included.
· **UL certification.** FILE: E532753 - Construction only.

AUTW

· IP23 rating (IK08).
· Power from 1 kVA to 1000 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Cable outlet with cable gland.
· Hoisting elements included.
· Detachable top and front cover.
· **UL certification.**

AUTZ

· IP65 rating up to 80 kVA / IP54 from 100 kVA (IK10).
· Power from 1 kVA to 1000 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Stuffing box cover for cable input depending on installation needs.
· Hoisting elements included.
· Detachable top cover.
· With silentblock.
· **UL certification.**

AUTN SERIES

For creating artificial neutral in three-phase lines · Input **400 V** · Output **Neutral** · **Zig-zag connection**

Definition and applications

The AUTN series are three-phase autotransformers designed to operate continuously and at maximum output.

Their main use, based on the zig-zag connection, is to withstand network voltage imbalances and provide a more stable neutral.

Manufacturing characteristics

- All the autotransformers are dipped in anti-flash varnish and then compacted in the furnace. This process increases the insulation grade, reduces noise and provides anti-moisture, waterproofed protection.
- The high power autotransformers are made with format cores and low loss properties, thus contributing to increasing their performance.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

AUTNX

· IP00 protection rating.
· Power from 1 kVA to 400 kVA.
· Total impregnated in anti-flash varnish.
· Hoisting elements included.
· **UL certification.** FILE: E532753 - Construction only.

AUTNW

· IP23 rating (IK08).
· Power from 1 kVA to 400 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Cable outlet with cable gland.
· Hoisting elements included.
· Detachable top and front cover.
· **UL certification.**

AUTNZ

· IP65 rating up to 63 kVA / IP54 from 80 kVA (IK10).
· Power from 1 kVA to 400 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Stuffing box cover for cable input depending on installation needs.
· Hoisting elements included.
· Detachable top cover.
· With silentblock.
· **UL certification.**

Technical features - standard model

Rating	**1 kVA to 400 kVA**
Standard voltage	**Input 400 V // Output Neutral**
Standard frequency	**50-60 Hz**
Connection unit	**ZN0**

AUTN SERIES

For creating artificial neutral in three-phase lines · Input **400 V** · Output **Neutral** · **Zig-zag connection**

On-request manufacturing options (please see prices)

Power	**From 1 kVA to 400 kVA**
Windings	**Copper or aluminium**
Frequency	**From 50 Hz to 400 Hz**
IP rating	**IP00, IP20, IP23, IP31, IP42, IP54, IP55 and IP65**
IK rating	**IK08 and IK10**
Room temperature	**Up to 60 ºC**
Locks	**Screw, key**
Short circuit voltage	**From 2% to 9%**
Operation	**Intermittent, continuous**
Cooling	**Natural, forced ventilation**
Electrostatic shield	**Up to three shields**
Class	**I, II**
Altitude	**Up to 4000 m**
Protections	**In both primary and secondary (figure 1)**
Temperature sensors	**PT100 (figure 2), PTC (figure 3) or bimetallic**
Temperature control	**Temperature control station (4xPT100) (figure 4), PTC thermal relays (3xPTC / 6xPTC)**
Network analyser	**(Figure 5)**
Anti condensation system	**Higrostat**
Heating system	**Heating elements**
External protection	**Anti-flash varnish, metallic or stainless steel enclosure**
Transportation and hoisting	**Wheels (figure 6), lifting points**
Paint	**C3, C4, C5, different RAL**
Feature plate	**High generation polymer or stainless steel (figure 7)**
Anti vibration system	**Silentblock**
Adjustment	**-10%; -7.5%; -5%; -2.5%; +2.5%; +5%; +7.5%; +10% With bridges (figure 8) or selector (figure 9)**
Certified	**CE, DNV-GL, BV, UL (insulation) and POLYLUX laboratory**
Climate class / environment / fire	**Up to C2-E2-F1**

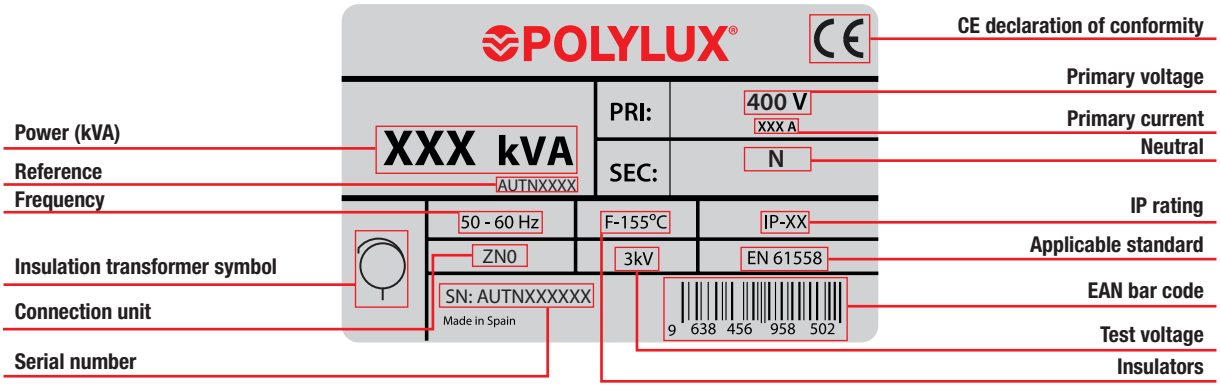
AUTN SERIES

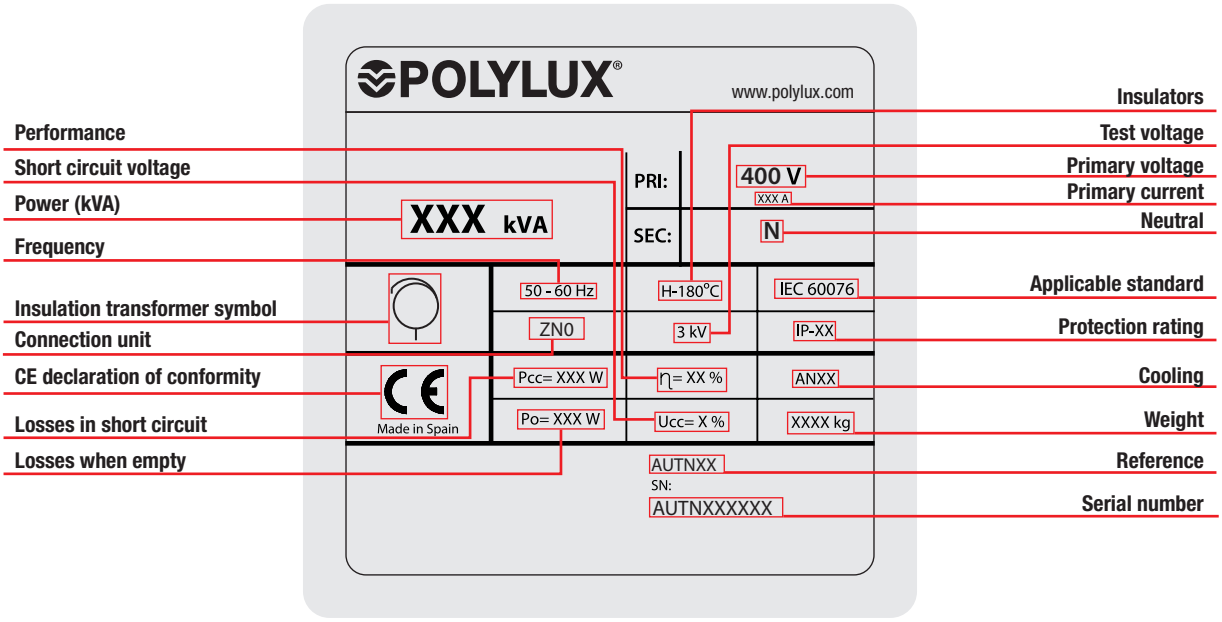
For creating artificial neutral in three-phase lines · Input **400 V** · Output **Neutral** · **Zig-zag connection**

Feature plate structure

Label up to 63 kVA:



Label from 100 kVA:



AUTF SERIES

For voltage changes **800 V** / **400 V**

Definition and applications

The AUTF series are three-phase autotransformers that can be used to reduce the output voltage of inverters from 800V to 400V. Thus achieving the working voltage required by the customer.

Manufacturing characteristics

- All the transformers are dipped in anti-flash varnish and then compacted in the furnace. This process increases the insulation grade, reduces noise and provides anti-moisture, waterproofed protection
- The high power transformers are manufactured with format cores and low loss properties, thus contributing to improving performance.
- All the transformers are checked automatically one by one and the compliance test report is created in accordance with the corresponding standard.

AUTFX

· IP00 protection rating.
· Power from 1 kVA to 2000 kVA.
· Total impregnated in anti-flash varnish.
· Hoisting elements included.

AUTFW

· IP23 rating (IK08).
· Power from 1 kVA to 2000 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Cable outlet with cable gland.
· Hoisting elements included.
· Detachable top and front cover.

AUTFZ

· IP65 rating up to 63 kVA / IP54 from 80 kVA (IK10).
· Power from 1 kVA to 2000 kVA.
· Metal box painted with RAL7035 polyester resin.
· High resistance to corrosion.
· Stuffing box cover for cable input depending on installation needs.
· Hoisting elements included.
· Detachable top cover.
· With silentblock.

Technical features - standard model

Rating	**1 kVA to 2000 kVA**
Standard voltage	**800 V / 400 V**
Standard frequency	**50-60 Hz**
Connection unit	**YN0**
Insulators	**Class H - 180 ºC**
Temperature rise	**Class F - 155 ºC≤ 80 kVA** **Class H - 180 ºC ≥ 100 kVA** *More information in Technical Appendix (T.A.1)
Windings	**Class HC-200 ºC**
Class	**I**
Altitude	**1000 m**
Enclosure colour	**RAL 7035**
IP rating	**IP00 (AUTFX)** **IP23 (AUTFW)** **IP65 rating up to 63 kVA / IP54 from 80 kVA (AUTFZ)**
IK rating	**IK08 (AUTFW)** **IK10 (AUTFZ)**
Paint class (ISO 12944)	**C3 (AUTFW)** **C4 (AUTFZ)**
Room temperature	**45 ºC**
Standards	**IEC/EN 61558, CE up to 31.5 kVA** **IEC/EN 60076, CE from 40 kVA**
Test voltage	**3 kV (1 min, 50 Hz)**
Inrush	**< 12 In**
K factor	**4**
Operation	**Continuous**
Cooling	**AN (AUTFX) - ANAN (AUTFW / AUTFZ IP65) - ANAF (≥1000kVA AUTFW / AUTFZ IP54)**

AUTF SERIES

For voltage changes **800 V** / **400 V**

On-request manufacturing options (please see prices)

Power	**From 1 kVA to 2000 kVA**
Windings	**Copper or aluminium**
Voltage	**From 1 V to 12 kV**
Frequency	**From 50 Hz to 400 Hz**
IP rating	**IP00, IP20, IP23, IP31, IP42, IP54, IP55 and IP65**
IK rating	**IK08 and IK10**
Room temperature	**Up to 60 ºC**
Locks	**Screw, key**
Short circuit voltage	**From 2% to 9%**
Operation	**Intermittent, continuous**
Cooling	**Natural, forced ventilation**
Electrostatic shield	**Up to three shields**
Class	**I, II**
Altitude	**Up to 4000 m**
Protections	**In both primary and secondary (figure 1)**
Temperature sensors	**PT100 (figure 2), PTC (figure 3) or bimetallic**
Network analyser	**(Figure 5)**
Anti condensation system	**Higrostat**
Heating system	**Heating elements**
External protection	**Anti-flash varnish, metallic or stainless steel enclosure**
Transportation and hoisting	**Wheels (figure 6), lifting points**
Paint	**C3, C4, C5, different RAL**
Feature plate	**High generation polymer or stainless steel (figure 7)**
Anti vibration system	**Silentblock**
Adjustment	**-10%; -7.5%; -5%; -2.5%; +2.5%; +5%; +7.5%; +10% With bridges (figure 8) or selector (figure 9)**
Certified	**CE, DNV-GL, BV, UL (insulation) and POLYLUX laboratory**
Climate class / environment / fire	**Up to C2-E2-F1**

EV SERIES

With manual control for single-phase networks · Input **230 V** · Output **0 V** to **250 V**

Definition and applications

The EV series are single-phase voltage converters with manual control.
Their main applications are:

- Variable power supply in laboratories.
- Light technology.
- Withstand voltage equipment.
- Temperature control with resistive loads.
- Voltage stabilisers.
- Speed control in electric motors.
- Adjustment of other fixed transformers.
- Galvanic control.

Manufacturing characteristics

Unbreakable electro-graphite carbon brushes for rolling motors.
Gentle movement brushes with an internal bearing system.
All the converters are checked automatically one by one and the compliance report is created based on the respective standard.

EVM SERIES

With motorised control for single-phase networks · Input **230 V** · Output **0 V** a **250 V**

Definition and applications

The EMV series are single-phase voltage converters with motorised control.
Their main applications are:

- Variable power supply in laboratories.
- Light technology.
- Withstand voltage equipment.
- Temperature control with resistive loads.
- Voltage stabilisers.
- Speed control in electric motors.
- Adjustment of other fixed transformers.
- Galvanic control.

Manufacturing characteristics

All the versions are made up of:

- A converter base.
- 12 Vdc motor / 30 VA to 5000 VA - FCPB4 option for supplying the motor.
  24 Vdc motor / 30 VA from 6500 VA - FCP2 option for supplying the motor.
- Limit switches.
- Motor terminal blocks.

All the converters are checked automatically one by one and the compliance report is created based on the respective standard.

EVT SERIES

With manual control for three-phase networks · Input **400 V** · Output **0 V** to **440 V**

Definition and applications

The EVT series are three-phase voltage converters with manual control.
Their main applications are:

- Variable power supply in laboratories.
- Light technology.
- Withstand voltage equipment.
- Temperature control with resistive loads.
- Voltage stabilisers.
- Speed control in electric motors.
- Adjustment of other fixed transformers.
- Galvanic control.

VK SERIES

Single-phase · Input **230 V ± 20 %** - Output **230 V ± 1 %**

Definition and applications

With the single-phase automatic voltage stabilizer, a stable output voltage is achieved with a variable input voltage (power company supply or other generator.
The goal is to power industrial equipment that requires a stable voltage input.
Valid for installations where line tension experiences fluctuations throughout the day.
Not valid for sudden changes in tension such as company maneuvers.

Technical features - standard model

Rating	**5 kVA to 50 kVA**
Standard voltage	**Input: 230 V ± 20 % // Output: 230 V ± 1 %**
Standard frequency	**50-60 Hz**
Response speed	**10 V/s**
Enclosure colour	**RAL 7035**
IP rating	**IP20**
Paint class (ISO 12944)	**C3**
Operating temperature	**From -10 ºC to 60 ºC**
Relative humidity	**< 90 %**
Performance	**> 98 %**
Standards	**IEC/EN/UNE-EN 61439-1, CE IEC/EN/UNE-EN 61558-1, CE IEC/EN/UNE-EN 60076-11, CE IEC/EN/UNE-EN 61000, CE**
Operation	**Continuous**
Cooling	**ANAN**

Manufacturing characteristics

All the VK models have:
- Built-in BY-PASS
- Automatic control of the regulating motor
- Digital current and voltage indicators
- Maximum overload 200% 2 seconds.
- Visual and audible alarms
- Protections:
  - Against over temperatures.
  - Against short circuits.
  - Against over currents and overloads.
  - Phase failure and loss of protection per phase.
  - MCB input.
  - Outside stabilization margins.

- All the stabilisers are checked automatically one by one and the compliance report is created based on the respective standard.

In case of galvanic separation consult special isolating transformers TT and TK models:
- Independent installation in front of the stabilizer in IP23 grade.
- These transformers will be prepared to withstand an overvoltage of the +20% or the selected special margin.
- Possibility of incorporating electrostatic screen
- Possibility of incorporating overvoltage arresters.

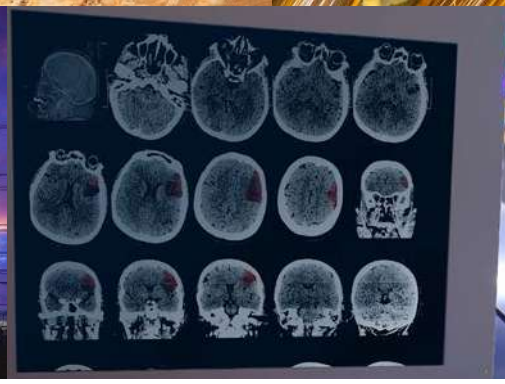
Power	To 600 kVA

SPECIAL

Most of the products requested by our customers are custom-engineered. This is due to the need for specific voltages, powers, losses, working temperatures, etc. in different parts of the world for different types of installations.

Today, Polylux is able to offer any product within the following specifications:

Single and three-phase encapsulated transformers with maximum voltages of 12 kV and three-phase products with powers up to 1000 kVA, as well as resin-encapsulated products up to 400 kVA. Polylux also has experience in manufacturing encapsulated single-phase high current transformers.



FABRICATIONS

Ratings

IP-00 Not protected from solids and water.

IP-20 Protected from solids over 12 mm in diameter, but not protected from water.

IP-23 Protected from solids over 12 mm in diameter and from water spray no more than 60º from the vertical.

IP-31 Protected from solids with a diameter greater than 2.5 mm and from vertically dripping water.

IP-42 Protected from solids with a diameter greater than 1.0 mm and from water srpay less than 15º from the vertical.

IP-54 Protected from contact with external elements and from dust ingress (deposits in quantities harmful to the appliance) and from water spray in any direction.

IP-65 Fully protected from dust ingress and from any contact. Protected from pressure water jets in any direction.

Advantages of resin encapsulation

High reliability in unfavourable vibratory conditions.

Protection from damp, corrosive environments.

Resistance to transient surge currents and harmonics.

Symbols

Isolation transformer.

Control and manoeuvre transformer.

Safety transformer.

Single-phase autotransformer.

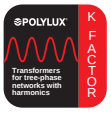
Three-phase autotransformer.

Transformer for clinical use in accordance with IEC/EN 61558 standard.

Protection from dust.

Protection from water in any direction.

Ecological equipment: high performance and low losses.



Transformers for three-phase harmonic networks.

Equipment for clinical electrical installations.

AT3- Table for the selection of conductors and protections for low power single-phase transformers

Calculation of maximum currents:

$$I_{max}\ (A) = \frac{Power\ (VA)}{Voltage\ (V)}$$

Based on the maximum current and voltage and depending on whether it is input or output for the protection, select the current equal to or higher than the one calculated in the table. For the output it is advisable to enter the standardised caliber lower than or equal to the calculated nominal current.

I_{max}	Max. cross-section (mm²)		Input protection (A)		Output protection (A)	
(A)	Flexible	Rigid	MCB -> D Curve	aM Fuse	MCB -> C Curve	gG Fuse
0.1	0.5	0.5	-	0.2	-	0.1
0.15	0.5	0.5	-	0.3	-	0.15
0.2	0.5	0.5	-	0.4	-	0.2
0.25	0.5	0.5	-	0.5	-	0.25
0.3	0.5	0.5	-	0.6	-	0.3
0.4	0.5	0.5	1	1	-	0.4
0.5	0.5	1	1	1	-	0.5
0.6	0.5	1	2	2	-	0.6
0.7	0.5	1	2	2	-	0.7
0.8	0.5	1	2	2	-	0.8
1	0.5	1	2	2	1	1
1.5	0.5	1	3	3	-	1.6
2	1	1.5	4	4	2	2
2.5	1	1.5	6	6	-	2.5
3.5	1	1.5	10	10	3	3
4	1	1.5	10	10	4	4
5	1.5	2	10	10	-	5
6	1.5	2	16	16	6	6.3
7	1.5	2	16	16	-	8
8	2	2.5	16	16	-	8
9	2	2.5	20	20	-	8
10	2	2.5	20	20	10	10
12	2.5	4	25	25	-	12
15	2.5	4	32	32	16	12
20	4	---	40	40	20	20
25	4	---	50	50	25	25
30	6	---	63	63	32	32
40	8	---	80	80	40	40
50	10	---	100	100	50	50

Example:

For a PD with a power of 500 VA, input of 400 V and output of 230 V, first calculate the input current:

$$I_{max}\ input = \frac{500\ VA}{400\ V} = 1,25\ A$$

According to the table the highest $I_{max\ would\ be}$ 1.5 A, so:

- Conductor: flexible, 0.5 mm² or rigid, 1 mm²
- Protection: MCB 3 A D Curve or 3 A aM Fuse

For the output, follow the same steps:

$$I_{max}\ output = \frac{500\ VA}{230\ V} = 2,17\ A$$

According to the table the highest $I_{max\ would\ be}$ 2.5 A, so:

- Conductor: flexible, 1 mm² or rigid, 1.5 mm²

According to the table the lowest I_{max} would be 2 A, so:

- Protection: 2 A gG Fuse

AT4- Table for the selection of protections for high power single-phase and three-phase transformers

Calculation of maximum currents:

- Single-phase: $$I_{max}\ (A) = \frac{Power\ (VA)}{Voltage\ (V)}$$

- Three-phase: $$I_{max}\ (A) = \frac{Power\ (VA)}{\sqrt{3}\cdot Voltage\ (V)}$$

Based on the maximum current and voltage and depending on whether it is input or output for the protection, select the current equal to or higher than the one calculated in the table. For the output it is advisable to enter the standardised caliber lower than or equal to the calculated nominal current.

I_{max}	Input protection (A)		Output protection (A)	
(A)	MCB -> D Curve	aM Fuse	MCB -> C Curve	gG Fuse
0.5	1	1	-	0.5
0.6	2	2	-	0.6
0.7	2	2	-	0.7
0.8	2	2	-	0.8
1	2	2	1	1
1.5	3	3	-	1.6
2	4	4	2	2
2.5	6	6	-	2.5
3.5	10	10	3	3
4	10	10	4	4
5	10	10	-	5
6	16	16	6	6.3
7	16	16	-	8
8	16	16	-	8
9	20	20	-	8
10	20	20	10	10
12	25	25	-	12
15	32	32	16	12
20	40	40	20	20
25	50	50	25	25
30	63	63	32	30
40	80	80	40	40
50	100	100	50	50
60	125	125	63	60
80	160	160	80	80
100	200	200	100	100
150	300	300	160	160
200	400	400	200	200
250	500	500	250	250
300	600	600	300	300
400	800	800	400	400
500	1000	1000	500	500
600	1200	1200	600	600
800	1600	1600	800	800
1000	2000	2000	1000	1000
1500	2500	2500	1600	1600

For high currents >100A modular MCBs are recommended with a thermal adjustment of 0.8-1In, to adapt to the nominal current of the transformer.

Example for single-phase transformer:

For a TKW with a power of 10 kVA, inputo f 230 V and output of 230 V:

$$I_{max} = \frac{10.000\ VA}{230\ V} = 43,47\ A$$

According to the table the highest I_{max} would be 50 A, so:

- Input protection: MCB 100 A D Curve or 100 A aM Fuse

According to the table the lowest I_{max} would be 40 A, so:

- Output protection: MCB 40 A D Curve or 40 A gG Fuse

Example for a three-phase transformer:

For a TTW with a power of 200 kVA, input of 400 V and output of 400 V:

$$I_{max} = \frac{200.000}{\sqrt{3}\cdot 400} = 288,67\ A$$

According to the table the highest I_{max} would be 300 A, so:

- Input protection: MCB 600 A D Curve or 600 A aM Fuse

According to the table the lowest I_{max} would be 250 A, so:

- Output protection: MCB 250 A D Curve or 250 A gG Fuse
