

Current transformers

Compacta series with its 5 models came into being to replace previous **Integra** series, composed of good 8 models.

The windows have been newly designed for having the possibility to use bars with different sizes on the same model; furthermore the overall dimensions have been reduced, mainly in width and height.

For the models TA327 and TA432 are available also executions with 0,2-0,2s-0,5s accuracy classes for tariff count applications.

New Compacta series is already available in our stock, whereas Integra series will be available until stocks last.
