

propatech® VCI Noxy

Protection grows
with movement!

Protection against corrosion

PROPATECH VCI NOXY is a mobile VCI integrator containing mini **PROPATECH VCI TABLETS**.

Thanks to its special spring-system, patented by Propack/Propagroup, the VCI molecules are quickly and constantly spread within your packaging throughout your product's entire voyage, also managing to reach hidden points, which are normally difficult to protect.

The **PROPATECH VCI NOXY** diffuser is easily applied inside the container and is activated several hours prior to the departure. As soon as it is activated the VCI protective molecules will begin to be diffused until the environment is saturated. **PROPATECH VCI NOXY** will remain active until it reaches its destination and, every time the transport vehicle moves, it will emit a new active protective substance.

These features make it especially suitable for integrating and enhancing the anti-corrosive action of the **PROPATECH VCI** products, especially in bulk packaging intended for long distances, also in critical climatic conditions. **PROPATECH VCI NOXY** provides incomparable, intense and long-lasting protection.

To solve problems caused by:

Corrosion

Oxidation

A SMART MOVE
propagroup

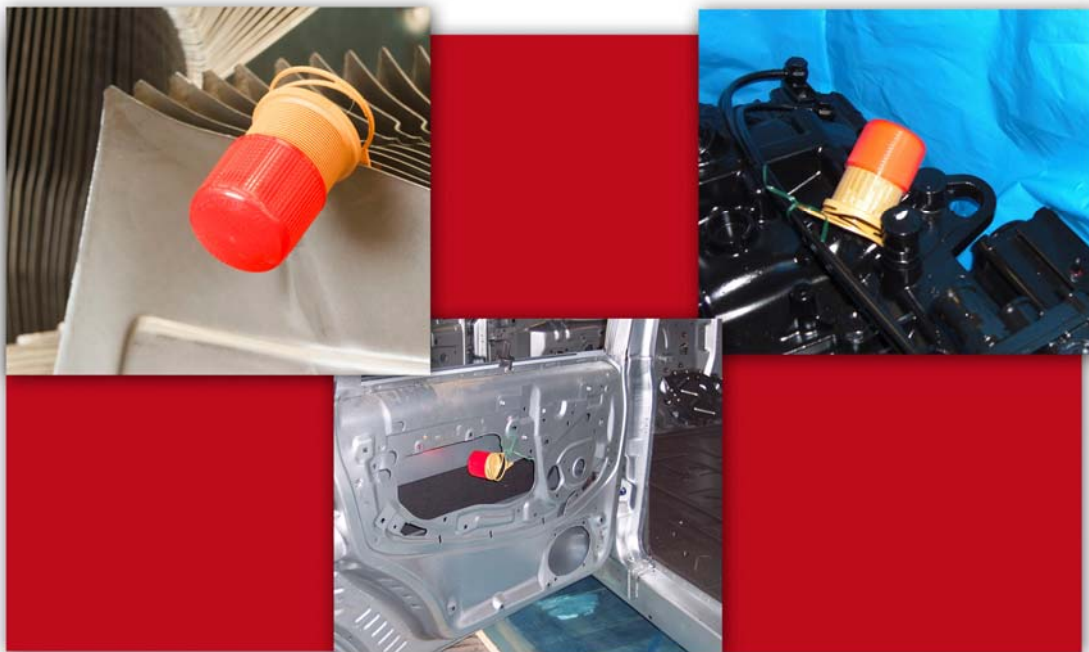

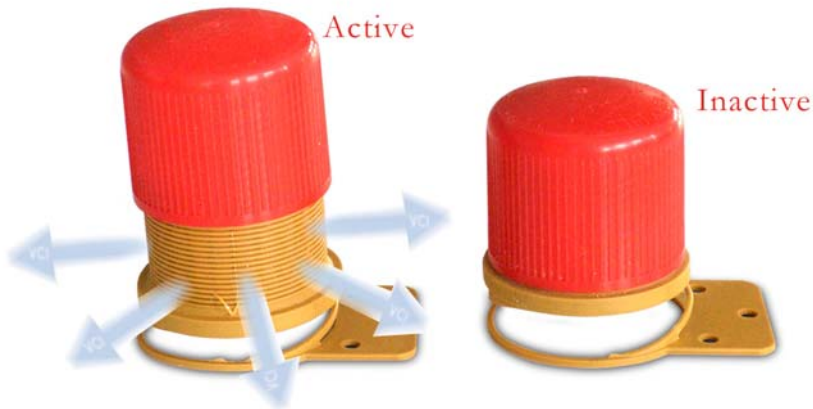

PROPATECH VCI NOXY can be activated and deactivated several times: making it economical, as well as effective.

PROPATECH VCI NOXY: THE OSCILLATING DIFFUSER

..... A WINNING PROPAGROUP IDEA!
