ADVANTAGES OF THE RAPID BARRIER COMPARED TO OTHER MODELS

Theft Protection:

WARNING! Thanks to its simple but effective mechanism, the barrier can be equipped with a latch to which an anti-theft padlock can be applied and not removed, thanks to its interlocking in the side profiles.

Test certificate:

The barrier has a test certificate for a size of 500 x 100 cm (width x height) at the Giordano Institute Spa that other Companies in the market have not either they did not satisfy the test for and therefore do not have it or have it up to 1m width.

Affordability:

It already has side profiles for sealing against hydraulic thrust and any latch as standard.

Aesthetics and Design:

On request, the lateral profiles can be camouflaged by varnishing them in the colour of what is behind or of the wall. They can also be supplied with the same height of the compartment and with a cover to hide the internal mechanisms, to look like an elegant and decorative frame, with the possibility of LED lighting inside. On request, the barrier can be covered by a photographic film reproducing what is behind, or varnished in a RAL colour matching its door, which makes it a product of the highest design.

Ease of installation:

The only barrier with an installation video, measurement and installation guidelines articulated with many well-detailed pages and accompanied by drawings and photos, always accompanied by a very detailed Use and Maintenance Manual.

Ease of relief:

Thanks to the protruding part of the lateral profile, of course compensating for any out of square/lack of orthogonality in the compartment.

Lightness and Strength:

The barrier is created with light materials. Thanks to the particular angular fixing profiles with hydraulic thrust sealing function, it can be raised only 3 cm to insert it. This makes the Rapid barriers easier to place than others, like those with U or C profiles that have to be raised of the double of the height of the barrier or those with stackable staves that has to be placed or removed stave by stave.

Maintenance:

The barrier does not rust as it is made of aluminum and stainless steel.

RAPID barrier 20 cm:

The barrier of this height is convenient to be climbed, but if it is very wide, it has little leverage for insertion and therefore it takes at least one man to slot it.

Customization:

We produce to measure in width from 23 cm up to 490 cm of mm in mm and we are able to perform multiples joined by special dividing posts to create embankments of Km even just to protect and completely enclose a house or a sector of a warehouse but also for large gates or fences. We also have STACKABLE barriers that can reach up to 350 x 220 cm in height.

Speed of delivery:

In few days with the best International carriers.

Ease of use:

The barrier can be applied quickly. It needs a very little space for insertion between any 2 protruding frames of the internal and external window, and fits with a simple "Click Clack" that keeps it well pressed and vertically even in case of strong water pression.

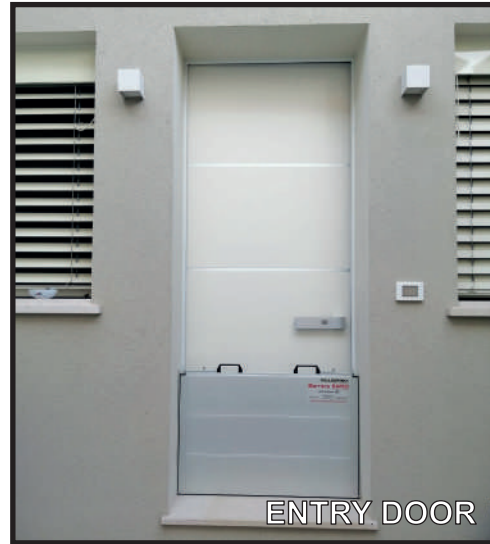

RAPID barrier certified leak test

Test phase at the **Giordano Institute** with a barrier full of water

DIMENSION TESTED: Width 500 x 100 cm Height (at least double of the similar ones on the market) complying with the IFT guidelines

EXAMPLES AND FIELDS OF USE

RAPID Barrier

PATENTED

Maximum width 4,90 m x maximum height 1,40 m*

*up to...

RAPID Barrier

Alcuni esempi di applicazioni

MODERNA Barrier
