

HOSE MANAGEMENT

SH Group provides a complete solution on-site

We can help you with identification, fabrication and installation of your hoses on-site. With this customised solution we minimize the risk of mistakes, because we perform the measurement and fitting on-site and install it right away – a quick and easy solution for you.

Design your service package

After changing the hoses we can help you implement data in your own Enterprise Asset Management system (EAM) that tells you all about the hoses and when replacement is needed.

We can make a complete hose management system, where we implement hose lists and maintenance schedules in your existent EAM system.

Mobile hose containers

We have two well-equipped 20 feet containers that enable us to produce hoses on-site.

All hoses are manufactured in accordance to the strict rules mentioned in the Marine Equipment Directive 96/98/EC (MED). SH Group is MED certified body by DNV.

During pressure test all hoses are flushed with hydraulic fluid and we ensure cleanness of the fluid to fulfil ISO 4406:1999 17/15/12 equivalents to NAS 1638 class 6.

After pressure test and flushing the hoses are sealed and ready for installation.

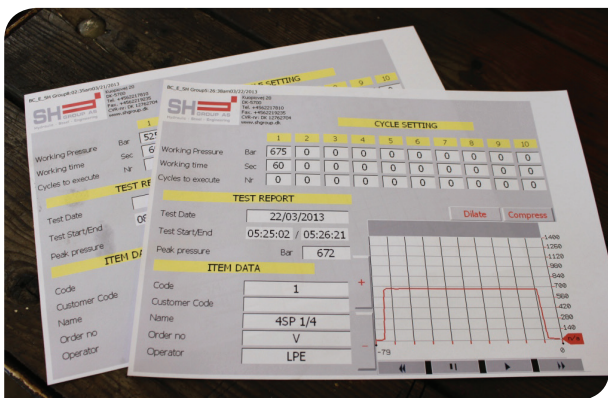

The hoses are supplied with MED certificate, pressure test certificate, and a customised hose list. We provide tagging of hoses and deliver low frequency chip, if required.

Pressure testing bench up to 1,200 bar with hydraulic fluid.

Manufacturing of MED certified hoses.

Test report, documentation and implementation of data in your EAM system.

Container 1

- Manufacturing of MED certified hoses
- Our professional hose technicians are certified for hose manufacturing and hose management systems

Container 2

- Pressure testing of hoses with hydraulic fluid
- Pressure testing bench up to 1,200 bar – 17,000 PSI
- Flushing

All hoses are manufactured in accordance with MED 96/98/EC.

Hydraulic hose with normal tagging and with MED tagging. We can also deliver hoses with offshore approved low frequency chip.

We have two well-equipped 20 feet containers that enable us to produce hoses on-site.
