

BMS

YOUR EUROPEAN PARTNER

CRANES AND MAN LIFTS
FOR ALL LIFTING
AND SERVICE JOBS

BMS A/S IS A 100% DANISH OWNED CRANE AND MAN LIFT COMPANY WITH ROOTS AND HEADQUARTERS IN DENMARK

We solve lifting assignments all over Europe, but with a special focus on Northern Europe especially on Scandinavia where BMS for decades has been the market leader in hiring out mobile cranes with highly skilled crews. BMS always operates with a maximum focus on safety, efficiency and reliability.

BMS hires out mobile cranes, truck cranes and truck mounted man lifts of any size and to any assignment from our net of offices around Denmark, Sweden, Norway and Poland. From here we also solve jobs in the rest of Europe. Furthermore, we hire out special equipment in all of Denmark – such as steel plates for temporary roads and equipment for machine relocation and skidding.

For the past five years, we have realized that our clients increasingly demand project managing, engineering and have even higher demands for safety. Therefore, an ever-growing part of our business include total solutions and project works related to lifting jobs and associated transport assignments. As the only Danish company in this business, we have established an engineering department that carries out the knowledge-intensive calculations

needed. This is why BMS is able to carry out the most complicated heavy lift assignments that the European market demands and we also assist in both the offshore- and the windmill industries. BMS always aspires to have the newest and most efficient machinery, and in our organization we have very capable employees with various skills: Engineers, auto-cad designers, crane operators, supervisors and project supervisors within logistics, planning and project management.

At BMS, safety and working environment have first priority. Our engineering and quality department makes sure that all assignments are done correctly and are well-documented, which sets the standard for the entire market – also regarding safety.

Not only is BMS the largest and best in Denmark, but we are also among the market leaders in Europe. Every day our staff works hard and diligent to maintain this status anticipating satisfied customers.

YOUR EUROPEAN PARTNER

// BMS - A SAFE BUSINESS PARTNER

BMS is certificated according to the health and safety standard OHSAS 18.001. The purpose is to keep a special focus on safety work. This way we want to protect our own and our customers' employees as well as the surrounding environment.

We wish to create a safety culture, where we take care of each other, and where it is normal to comment, if someone is working inappropriately and endangering him or others.

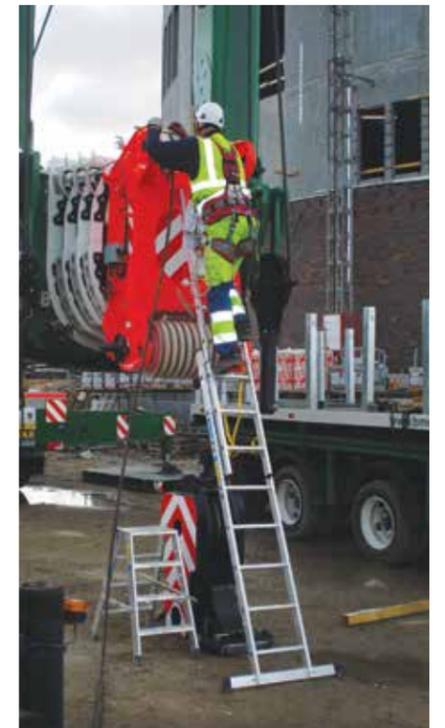

In BMS we have a vision of zero accidents, which we aim to achieve through:

- Annual safety training for all BMS employees.
- Obtain knowledge from incidents, which we report in our system.
- Perform safety inspections/-observations.
- Develop safety campaigns to increase focus on relevant risks.
- Reward achievement of safety goals
- Ensure a high level of communication regarding the safety work.

In BMS we believe that a high level of safety helps to increase the quality of the final product for our customers, and thereby creating value.

When you choose BMS as your business partner, we can ensure you that the job will be done by competent people.

// MOBILE CRANES

From 50 to 750 tons.

BMS has the most extensive and versatile fleet of mobile cranes in Denmark. We can effectively solve any lifting assignment of any kind or scope.

The flexibility is not ensured only by the large assembly of machinery in itself. The will to be at the right place at the right time, with the perfect crane solution is essential for the quality and economy of the job execution.

We bring the exact equipment needed at any given job, no more no less.

// STEEL PLATES

BMS hire out steel plates which ensure a stable surface to all kinds of construction work. The steel plates serve three purposes:

Safety has top priority when trucks, man lifts and cranes are securely placed on firm ground.

Efficiency is ensured when you avoid that trucks and construction machinery are bogged down.

Restoration of a construction site is easier and cheaper when the ground is not compressed by the work of heavy machinery.

// CRAWLER CRANES

From 100 to 1.350 tons

Crawler cranes are in particular well suited for construction- and steel erection assignments, and this cranes type is erected and lifts without outriggers.

At the same time, it can also transport the load which makes it flexible and quick at the construction site.

// TRUCK MOUNTED CRANES

From 21 to 220 tons m

When an assignment requires both transport and lift, truck cranes are often the best solution.

BMS rents out truck mounted cranes from 21 ton meter up to 220 ton meter for hoisting construction materials, elements, steel constructions and transport of modules and machinery relocating.

// MOBILE TOWER CRANES

With layer up to 60 m

The mobile tower crane combines a mobile crane's flexibility with a tower crane's reach. The cranes are ready to lift in only 20 minutes and also meet the latest environmental requirements.

The mobile tower cranes are designed for use at shorter erection assignments or when hoisting materials over a building. Particularly in crowded cities it will outdo most alternatives.

The cranes can be controlled by remote control, so the crane operators can be quite close to the load or stand on the installation site. The crane is equipped with powerful lighting on the horizontal boom, which can light up the entire working area.

// ENGINEERING

BMS has a fully staffed engineering department prepared to carry out a variety of assignments, including the following:

Crane layout drawings and heavy lift projects in AutoCAD 2- and 3-D

Steel design and design of lifting systems according to Euro-Code and offshore codes

Method statements

Risk analysis

Our innovative staff works together with the personnel in the field to develop new job methods and test unusual ideas. And our engineers act as supervisors in the field, to ensure the most direct link in case of unforeseen events and maximum learning for the next job.

// MACHINERY RELOCATION AND TRANSPORT

BMS is a market leader within transport of heavy equipment. We have equipment to handle all dimensions – from small safes to giant constructions such as bridge weighing thousands of tons.

We have the expertise to:

- Complete relocation of factories including dismantling, fitting and transport.
- Internal and external transport of machines at home and abroad.
- Packaging and shipment by air, or land, or at sea.
- Project management and coordination when establishing new factories.
- Relocation of clean rooms as well as handling of sensitive equipment.
- Handling and storage of big and smaller machines.
- Relocation and handling of machines at power stations.
- Lift and relocation of complete bridge spans.

In addition to this, the graphic industry and companies working with metal, plastic, medical supplies, and food is on our list of references.

For BMS machine transport is a matter of trust, therefore we place great emphasis on safety. It requires competent employees, and the handling equipment always is kept in good repair. We can with accuracy and precision help you with an exact solution, no matter what your needs are.

// BRIDGE INSPECTIONS

BMS has special man lifts which secure a quick and safe access to work under bridges, in tunnels, and harbors both to perform inspections, repair of work, or new construction.

The bridge lifts can be utilized on both roads- and on railways.

The lifts take a very short time for rigging which minimizes the inconvenience for the traffic. The lift moves freely during the working situations, and is equipped with electricity at the work platforms.

The lifts can be equipped with extra platforms to work on pier shafts and pylons.

// TRUCK MOUNTED MAN LIFTS

From 45 to 103 m

BMS truck mounted man lifts are today one of the greatest providers of big lifts, bridge lifts and mountain protection lifts in the world.

The truck mounted man lifts are being used to solve assignments in the oil and wind industry, telecommunication, power heating plants, mountain protection, assembly work, and window cleaning.

BMS truck mounted lifts are especially suitable for assembly work because the basket has a load capacity of up to 600 kg. All lifts are also mounted with a crane boom which makes it possible to solve assignments with winch at heights – and with 220/380 volts work power.

All lifts are equipped with floor heating and fan heaters in the basket. This elevates the efficiency.

The lifts used for mountain protection are equipped with powerful drills, compressors and generators with high capacity.

The truck mounted man lifts are mainly used in Northern Europe.

BMS IS ALWAYS CLOSE....
OUR VAST SELECTION OF EQUIPMENT IS DEPOSITED
AT 11 DIFFERENT OFFICE LOCATIONS, MAKING US
ABLE TO REACH ANY PROJECT FAST - SAVING BOTH
TRANSPORT COSTS AND TIME.
