

Finishing & Paint Conveyor System

New conveyor technology for various applications! You will experience several advantages with the OCS Finishing & Paint conveyor system if you compare it to a traditional conveyor system.

- ✓ Forward and backward travelling
- ✓ Modular and modifiable
- ✓ Scalable and flexible
- ✓ In-line speed changes
- ✓ Soft start and stop
- ✓ Clean and quiet
- ✓ Less space usage
- ✓ Short installation time

The technology that makes the OCS system revolutionary is its unique conveyor system, smart controls and flexible design. Our conveyor technology allows parts to move both forward and backward within the system to maximize efficiency and minimize floor space. The OCS system can be installed in half the time of a traditional conveyor system and complete system setup results in a 30% smaller space usage.

All of the system modules and components will be built and prepared off-site and delivered in complete pieces, so whether we're replacing your old system or building a new one, the installation will be completed in a minimal amount of time, getting your business up and running as quickly as possible.

... your need – our know-how

Finishing & Paint Conveyor System

With the OCS Finishing & Paint conveyor system you will have an optimal solution for transportation, higher throughput and a more even flow, thanks to one of the most profitable and reliable overhead conveyor systems available in the market.

The simplicity and the reliability of the system and its unique possibilities for flexible changes make it easy for future extensions or layout modifications. With the system you build an effective and balanced production flow, which at the same time reduces your space and decreases your locked up capital.

The overhead transport trolleys are controlled by a PLC or a computer based system, which is linked to your existing production system. This provides a more effective production flow and reduces the amount of material in process.
