	Code 7 or DOE (others available)
	EPDM (others available)

A range of absolute rated cartridge filters from Ultrafilter, featuring the latest developments in borosilicate glass fibre filter media technology, GP-M Series cartridges are constructed from robust glass fibre and polypropylene filtration layers, offering removal ratings from 0.5 to 5 micron absolute.

GP-M Series cartridges are suitable for absolute removal of unwanted particulates and for prefiltration to membrane filters.

The GP-M Series cartridges incorporate a polypropylene prefiltration layer, combined with a high dirt capacity glass fibre media. This has the effect of longer service life, improved operating costs and smaller process footprint.
