■ Features

- Wide input voltage range 10~60VDC / 60~420VDC by models
- High efficiency up to 91%
- Modular design for flexible configuration
- Flexible CC/CV operation modes
- Remote control and monitoring by CANBus protocol via CMU2A control console
- Maximum 64 units ERG-5000 series that can be connected
- Protections: Over voltage / Under voltage / Over temperature / Over power / Grid fault / Communication error
- 5 years warranty

■ Applications

- Battery test or power supply aging system
- Energy recycling system
- Connector mechanical test

■ Description

ERG-5000 series is an Grid Type energy recycling power inverter that supports 5KW rated and maximum up to 6KW input, It can achieve high efficiency up to 91%. CC and CV modes selectable and 4 input channels design that can be used independently or connected in series or parallel offer flexible combinations for various applications. Moreover, the ERS-5000 series also provide remote control and monitoring functions by using CMU2A or the CANBus protocol for data analysis and remote monitor. ERG-5000 supports 10~60VDC input voltage & ERG-5000H supports 60~420VDC input voltage.

NOTE	<p>1.All parameters NOT specially mentioned are measured at 230VAC output,48VDC input (ERG-5000),380VDC input(ERG-5000H),rated input power and 25°C of ambient temperature.</p> <p>2.It achieves max input power up to 6000W, auto derating to rated power by ambient temperature increasing , OTP occurs when the internal temperature exceeds the limit.</p> <p>3.Grid Fault:Includes AC output over voltage protection and under voltage protection.</p> <p>4.Tolerances are calculated based on MAX input current and MAX input voltage. Tolerances may increase during high and low ambient temperature operation.</p> <p>5.Guidance of additional filter, please refer to user manual for more detail.</p> <p>6.The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 900mm*1300mm metal plate with 2mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." EFFICIENCY vs LOAD

※ ERG-5000 model

Efficiency measured at 48VDC input and 25°C of ambient temperature

※ ERG-5000H model

Efficiency measured at 380VDC input and 25°C of ambient temperature

Energy Recycling Ratio Calculation

※ Energy recycling ratio = Efficiency 1 (power supply) x Efficiency 2 (ERG-5000 series)
