FOCUS | Safe Joining with Controlled Hot Air Technology

Construction | Flat and Pitched Roofs

Leister Products for Plastic and Bitumen Welding in the Construction Industry

Leister Solutions for Roof Sealing

If you weld waterproofing membranes on flat and pitched roofs, you need to be able to rely on the quality and reliability of your welding machines. For decades, Leister has been synonymous with reliable, durable and innovative products as well as outstanding all-round service. Worldwide.

We know how.

Reliable Joining of Roof Membranes

Flat roof construction continues its growth trend and meets today's performance requirements. Whether a logistics center or functional industrial roof - today, flat roofs are used to generate added value for the building owner and the environment.

The four Requirements for a Utility Roof

- It should be permanently sealed to provide protection against external influences.
- It should be planted with vegetation to enable retention, hold water and provide relief for the storm sewer system.
- A photovoltaic system and a hot water generation system should be installed in order to generate a return.
- The vegetation is intended to create biodiversity and improve the microclimate in order to give the roof area back to nature.

Under the right conditions, flat roofs offer an excellent opportunity to transform protective roofs into utility roofs. These days, building owners no longer have to choose between photovoltaic systems and green roofs, as a combination of both is particularly beneficial.

Safe Welding of Roof Membranes

Due to increased requirements and multiple uses, a permanently watertight flat roof is essential. This is why high-quality welding equipment is essential. The automatic welding machines VARIMAT 700 and VARIMAT 500 from Leister, launched in 2024, will exceed your expectations and inspire you. Both welding machines are equipped with the Leister Quality System (LQS), power management and Monitored Welding Assistant. The VARIMAT 700 is providing you with a GPS-supported report to document your welding.

You can weld reliably even when dealing with undervoltage of up to 20 %. And if you do leave the welding window, your VARIMAT will issue a visual and audible warning signal. Plastic welding has never been more dependable.

"Leister has everything we need. Here we can find the right welding machine for every roof application and we are delighted with the quality. We have been depending on Leister for years for reliable appliances, expert advice and perfect service."

Ivo Mathis
CEO Mathis Flachdach AG

The Right Product for Every Application

Whether you're sealing flat or pitched roofs, Leister has the right product for every application. The overlap welding machines VARIMAT 700, VARIMAT 500 and VARIMAT 300 set new standards when it comes to roof sealing. Based on analysis and feedback from our customer base around the world, we have developed a new generation of welding machines that are even more flexible, reliable and easier to operate.

Welding with the Correct Parameters

Leister has been working successfully for years with well-known membrane manufacturers, experts, associations and roofers. This allows us to understand your needs and continuously develop our products.

You want process security when welding all thermoplastic membranes. That's why it's always our goal to help you minimize sources of error. The solution is the Monitored Welding Assistant, which monitors your weld electronically. If modern welding machines go over or under welding parameter limits, an electronic assistant is activated and informs the user with a visual and acoustic alarm.

To set the correct welding parameters, you will find proven welding profiles in the myLeister app and in the menus of the VARIMAT 700, VARIMAT 500 and UNIROOF 700 welding machines.

Your Benefits at a Glance

- Top-quality welding – always at the cutting edge of technology, customized to your needs and applications
- Constant welding, even when dealing with undervoltage and difficult construction site conditions thanks to controlled parameters and power management
- Quality assurance thanks to LQS Roofing (GPS welding protocol) and the Monitored Welding Assistant
- High welding speed and reliable weld width
- Welding window for determining welding parameters
- Machines with intuitive operation and large displays
- Low maintenance costs thanks to brushless motors and the use of high-quality components as well as long heating element service life
- Long spare parts guarantee and highly-skilled service
- Energy-saving Eco-Mode

Product Overview of Flat Roof Welding Machines

Function	VARIMAT 700	VARIMAT 500	VARIMAT 300	UNIROOF 700	UNIROOF 300	UNIDRIVE 500	BITUMAT B2

Application							
Large roofs (>500 m ²)	✓	✓	✓				✓
Medium roofs (<500 m ²)	✓	✓	✓	✓	✓	✓	✓
Small roofs (<200 m ²)				✓	✓	✓	
Modified Bitumen membranes				✓	✓		✓

Welding even with Undervoltage

Roofers struggle with undervoltage on construction sites all over the world. This is usually due to overloaded temporary construction site power supplies and faulty extension cables. Leister welding machines with power management and controlled electronics provide a solution.

Power Management: your Advantage when Dealing with Undervoltage

If you use Leister VARIMAT 700, VARIMAT 500 and UNIROOF 700 welding machines, you will achieve the required welding temperature even with undervoltage up to a maximum of 20 %. The reason: Leister power management.

At an undervoltage of more than 20 %, the Leister automatic welders switch off automatically. This is because the set welding parameters may then no longer be maintained, which impairs the welding quality.

With appropriate software ("power management") and a powerful heating element, the welding machine can be operated at 230 V:

Thanks to Leister power management, even in the event of undervoltage you can achieve the significantly higher temperatures you need for welding PVC liners, for example.

The Right Extension Cables are Crucial

To achieve full power with your electric welding equipment, you need to use the right extension cables. Please observe the following points:

- the larger the cable cross-section, the better
- always use reliable plugs and couplings
- use high-quality extension cables
- circuit breakers should be designed for 230 V, 20 A and for 400 V, 16 A
- observe maximum cable lengths
- use a generator with at least 10 kW capacity (rule of thumb: required power x 2)
- a voltage of 400 V is advantageous for a reliable power supply

Without appropriate software ("power management") and a commercially available heating element, the welding machine can be operated at 230 V:

Quality Assurance with LQS Roofing

Thanks to the Leister Quality System, or LQS for short, you and your customers receive a welding log, supported by GPS, to check your welds, and your Monitored Welding Assistant warns you when your parameters leave the welding area.

Increased Process Security while Welding

With LQS Roofing, you can create professional welding logs in no time to demonstrate the quality of your work.

You can find LQS Roofing for your LQS-compatible Leister devices free of charge in the myLeister app. With public projects to bid and invitations to bid from architects, a welding data log is increasingly required. LQS Roofing supports you in verifying your welding work. This gives you investment security and puts you on a solid footing for the future.

Install the myLeister app for your new, digital experience. For iOS, Android and Windows.

Monitored Welding Assistant

Leister's "Monitored Welding Assistant" monitors your welding process and warns you with an alarm if your set parameters leave the welding area.

Electronic quality assurance saves and logs your welding work and offers the following benefits:

- Verification with GPS-supported welding parameters
- Automatic welding report for checking and minimizing possible errors
- Verification document of the set welding parameters
- Process security with documented weld seam length
- More control over the joining technique and prevailing electrical voltage

Heating element, 100V/1600W

All accessories can be found from page 22.

TRIAC AT

The TRIAC AT heat gun is designed to weld and mold plastic. The temperature and air quantity can be set separately by means of its e-Drive control unit.

Technical data

Voltage	100 V; 120 V; 220 V; 230 V	
Frequency	50/60 Hz; 60 Hz	
Power	1500-1600 W	
Temperature	40-620 °C	104.0-1148.0 °F
Temperature setting stepless	Yes	
Airflow (20°C)	120-240 l/min	4.23-8.47 cfm
Stepless air volume adjustment	Yes	
Static pressure	3000 Pa	0.43 psi
Eco-Mode	Yes	
Display	Yes	
e-Drive	Yes	
Outdoor use	Yes	
Nozzle connection ø	31.5 mm / 1.25 in; M14	
Length	335.0 mm	13.18 in
Device diameter	90 mm	3.54 in
Handle diameter	56 mm	2.2 in
Weight	1.02 kg	2.24 lb
Power cable length	3.0 m	9.84 ft
Noise emission level	67 dB (A)	
Approvals	CE; KC; S+; UL	
Protection class	II	
Country of origin	CH

TRIAC ST

The TRIAC ST is a robust, universally versatile heat gun for welding plastic membranes, and shrinking and molding various thermoplastics.

Technical data

Voltage	100 V; 120 V; 220 V; 230 V	
Frequency	50/60 Hz; 60 Hz	
Power	1500-1600 W	
Temperature	40-700 °C	104.0-1292.0 °F
Temperature setting stepless	Yes	
Airflow (20°C)	240 l/min	8.47 cfm
Stepless air volume adjustment	No	
Static pressure	3000 Pa	0.43 psi
Eco-Mode	No	
Display	No	
e-Drive	No

ELECTRON ST

With a power of 3400 Watts, the ELECTRON ST is an especially strong heat gun. Well-suited for professional welding of modified bitumen and thermoplastics with high material strength.

Technical data

Voltage	120 V; 200 V; 220 V; 230 V	
Frequency	50/60 Hz; 60 Hz	
Power	2300-3400 W	
Temperature	40-650 °C	104.0-1202.0 °F
Temperature setting stepless	Yes
