

SEISMIC

**OFFSHORE
& SUBSEA**

INDUSTRY

PartnerPlast

PartnerPlast is a leading specialist in plastic, rotational moulding, and design. We manufacture a wide range of products within our product division: Seismic, Offshore & Subsea, and Industrial.

Our history stretches all the way back to 1946. We supplied our first buoyancy products to the offshore industry in 1979 and the development of subsea products started in the late 1990s.

Åndalsnes is a center for plastic industry in Norway and many of our key suppliers are located right on our doorstep. This has enabled us to have an exceptional track record of supplying every single project on time, and we will do our very best to keep it that way!

Right from the start, our experience and know-how have made us a reliable supplier for our customers and most of the development has taken place in close collaboration with our customers and partners.

Development

Rotational moulding is a manufacturing process used primarily to create seamless, stress-free, hollow products. The process was applied to plastics already in the 1940s, but in the early days it was little used due to long processing times and limited range of materials available.

The powdered grades of polyethylene specifically tailored for rotational moulding were introduced in the 1950s, and that together with the development of the hot air oven resulted in a significant increase in usage of the method.

Rotational moulding offers the opportunity to manufacture stress-free parts with uniform wall thickness and complex shape at relatively low production cost. New mould and machine features, improvements in process control and the continuously growing selection of plastic powders available have made rotational moulding a competitive alternative to blow moulding, thermoforming, and injection moulding.

Service and support

To ensure fast delivery, we have a wide range of products in stock. We also offer leasing and repair services for buoys.

Electronics

All our electronics are designed, developed and produced together with our local suppliers. To meet our customers' specific needs, our engineers can either customise the functionality and the interfaces of existing products, or develop a new product that meets the unique requirements.

Elbox – Charge and control system, Radio – Control system, Dynav – positioning system, DTAC M2M – Iridium tracking and control, PWX – Signal lights

Seismic

For almost 20 years we have been a leading supplier of equipment for the seismic industry. We have developed and supplied some of the most advanced equipment that is being used today.

We are continuously working on optimising technological solutions adapted to our customers' requirements.

We supply turnkey systems that also include the steel structures and developing and manufacturing of the electronics.

Industrial

With its design flexibility and a wide choice of materials, rotational moulding has a great potential in the industrial market.

The variety of products that can be rotationally moulded is extremely versatile and a good example on this is our contract with an international supplier of defence related systems and products.

We have also developed an all-plastic wheel chair that can be used in airports, hospitals, pools and spas.

Offshore

We supply a wide range of buoyancy products for different purposes. Our product portfolio covers applications from water surface down to a depth of 7,000 metres.

The size of our products varies from the smallest spherical buoys with a buoyancy of a few kilograms up to modular systems with a buoyancy of several tens of tons. All the buoys are manufactured at our factories in Åndalsnes.

Rauma

If you are the outdoor type, Rauma is for you. Both summer and winter you can experience the fjords, mountain tops, and everything in between in whatever way suits you best. Try skydiving, BASE jumping, downhill cycling or skiing, go fishing, paddle in the river, or maybe hike over the famous Romsdalseggen ridge.

Plastic Town

Plastics have a long history in Rauma – and Åndalsnes is the center of the plastics industry in Norway. Together with other local plastic manufacturers we have competence and experience in most main areas in the plastics industry.

Festivals

Several great festivals are held every year in Rauma. RaumaRock offers a weekend of varied music performed by both national and international artists. Romsdalsvinter skiing festival and Norwegian Mountain Festival bring together people with a common love of mountains and nature – and celebrate the fantastic and wild nature we are surrounded by here in Rauma.
