

THE QUALITY IN RIVETS, RIVET NUTS AND RIVETING TOOLS

2023 CATALOGUE

Leading multinational, dedicated to the manufacture and distribution of blind rivets, structural rivets, blind rivet nuts and riveting tools.

PRODUCTION PLANTS

With production plants on three continents, commercial delegations in ten countries and customers in more than 60 countries, BRALO's vision is to be a global company.

QUALITY AND LATEST TECHNOLOGY

In all production plants exists a quality system plan based on an exigent inspection requirements for raw materials, products and machinery.

LATEST TECHNOLOGY

We have the most advanced technology for computer control throughout the production process and all our plants operate automatically.

CUSTOMER SERVICE

BRALO offers advice and training on which rivets and rivet nuts choose. We attend and manage your orders in a fast and personalized way.

TOOL SAFETY

Safety in the use of our products is one of the main objectives of BRALO, with continuous improvements and innovations in our products.

All our riveting machines count with the safety and ergonomics established in the European directives 2003/10/ CE and 2002/44/CE on the impact of vibrations and noise on the operator.

PRODUCTION

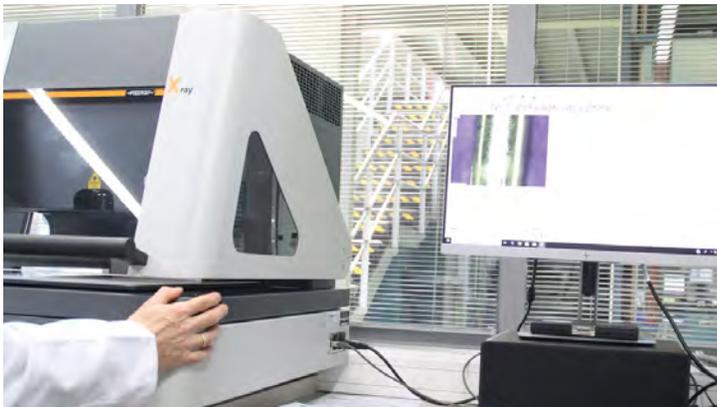

- SERIAL PRODUCTION.
- AUTOMATED SUPPLY.
- STOCK AVAILABILITY.

AFTER SALES

- WORLDWIDE DISTRIBUTION.
- ORDERS MANAGEMENT.
- CUSTOMER SERVICE AND TRAINING.

QUALITY CERTIFICATIONS

ISO 9001:2015, accredits that the company meets the needs of customers and other stakeholders while meeting regulatory requirements related to the product.

IATF 16949:2016 Defines the quality management system requirements for the design and development, production and service of automotive related products.

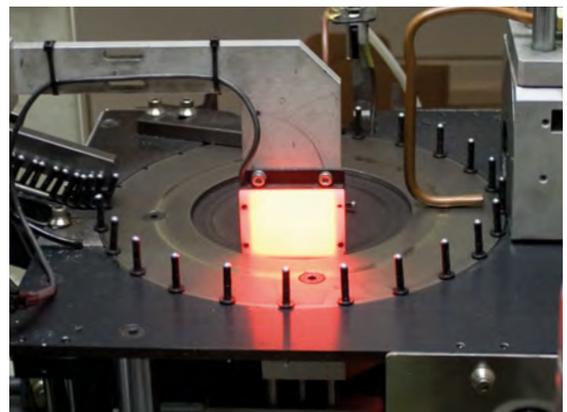

R&D

BRALO is a strong believer in R&D, investing 5% of our revenue into it. This is done with the goal of continuously improving our ability to always be able to offer innovative products that go above and beyond market demands, and that meet the highest quality STANDARDS.

ISO 14001:2015 ENVIRONMENT

BRALO's dedication to the environment and sustainable development has led us to carry out active management with the good of the planet in mind, such as accredits its **ISO 14001:2015** certification.

INSPECTION MACHINES

Our manufacturing monitoring systems verify the suitability of 100% of the products.

We guarantee that our parts, located in demanding applications, offer the security required for both the final recipient as for the different industries, automotive, construction or renewable energy.

BATTERY RIVETING TOOL

With capacities from 2.4 to 7.8 standard, structural and S-trebol.

| p. 127

NUTS AND RIVETS WITH SEALANT TREATMENT

ESTRUBOLT

Structural rivet with high tensile and shear strength, good hole filling and high tightness.

| p. 77

GAMA HT

HYDROPNEUMATIC RIVETING TOOLS

Ideal for high strength rivets such as lockbolts, Estrubolt and Structural rivets.

| p. 121

NEW LOCKBOLT RANGE

| p. 78

BLIND RIVET STUD RANGE

We expand types of blind rivet studs.

| p. 97

For more than four decades, BRALO fastening systems have been developed with the most innovative technology, constituting a wide range of rivets, rivet nuts and installation equipment.

RIVETS AND LOCKBOLTS

The BRALO range has more than 6,000 references on the market, from blind and structural rivets to high-strength collar bolts.

Available in aluminum, steel, stainless steel and copper. Thanks to our wide assortment of materials, finishes and coatings, the customer can choose all the characteristics of the rivet: from colour to design.

RIVET NUTS

The variety of rivet nuts is infinite: cylindrical, grooved, hexagonal, semi-hexagonal, etc.

We have different materials, aluminum, steel and stainless steel, in addition to several types of head for each application, low, large, countersunk and extra-large.

The nuts can be treated with protective finishes and coatings for added strength.

SPECIAL PIECES

BRALO serves customers in a wide variety of industries with infinite production environments, from repairs and maintenance, to automated workplaces and production lines, and in all offers its services for the design of special and custom parts.

HAND TOOLS

The most extensive search for quality and our constant improvement policy make BRALO Manual Tools distinguished for their ergonomics, lightness and durability.

PNEUMATIC RIVETING TOOLS

Designed to increase the efficiency in production lines.

BNT range and BRALO HT are high performance riveting tools capable of setting a wide variety of blind rivets and rivet nuts. They are powerful, ergonomic tools, with an efficient setting system, designed to meet the needs of the most demanding of applications.

BATTERY RIVETING TOOLS

Being portable and fast, BRALO's electronic tools have the capacity for setting both standard and structural rivets.

The new BT-20 offers light weight battery tool designed to meet the needs of the most demanding of applications. BRALO battery riveting tools are portable and with high performance technologies and provide a wide assembly capacity and a powerful Li-Ion battery.

BLIND RIVETS

We have products made with high quality materials to ensure they meet the high quality standards of the different industries.

RIVET MATERIALS

- **Aluminium Mg (EN AW 6101)**
Clear metal or coloured. Applications in soft materials and with less resistance.
- **Aluminium Mg 2,5 (EN AW5052)**
Clear metal or coloured. Applications where shear and tensile strengths are needed and with good resistance. It is used for Multigrip rivet.
- **Aluminium Mg 3 (EN AW 5754)**
Clear metal or coloured. Applications in soft materials. It's used in Trebol rivet. High corrosion resistance.
- **Aluminium Mg 3,5 (EN AW 5154)**
Clear metal or coloured. It's used for Standard rivets for all types of applications.
- **Aluminium Mg 5,0 (EN AW 5019)**
Clear metal or coloured. It's used for rivets in applications where shear and tensile strengths are needed. It has high resistance.
- **Steel**
Common material. Applications in resistant materials. The surface coated steels are governed by ISO 4042.
- **Stainless Steel (304, 316)**
Corrosion resistance. Applications where there are adverse weather conditions.
- **Copper**
Thermal and electrical conductor. Applications in soft materials.
- **Monel ® (Nickel Copper Alloy)**
High tensile strength. High resistance to corrosion, salt water, acids and alkaline solutions.

HEAD TYPES

DOME HEAD

This is the most versatile type of head. It provides enough bearing surface to retain all kinds of materials, except those extremely smooth and brittle.

LARGE HEAD

This provides double the bearing area compared to the dome head and offers a great resistance. They are designed for applications where a soft or brittle material is assembled to a rigid support material.

COUNTERSUNK HEAD

This type of head allows the riveting of a bigger thickness. It's designed to appear as a flat surface, flush with application.

MATERIAL COMPATIBILITY

How to choose a rivet to minimize galvanic corrosion

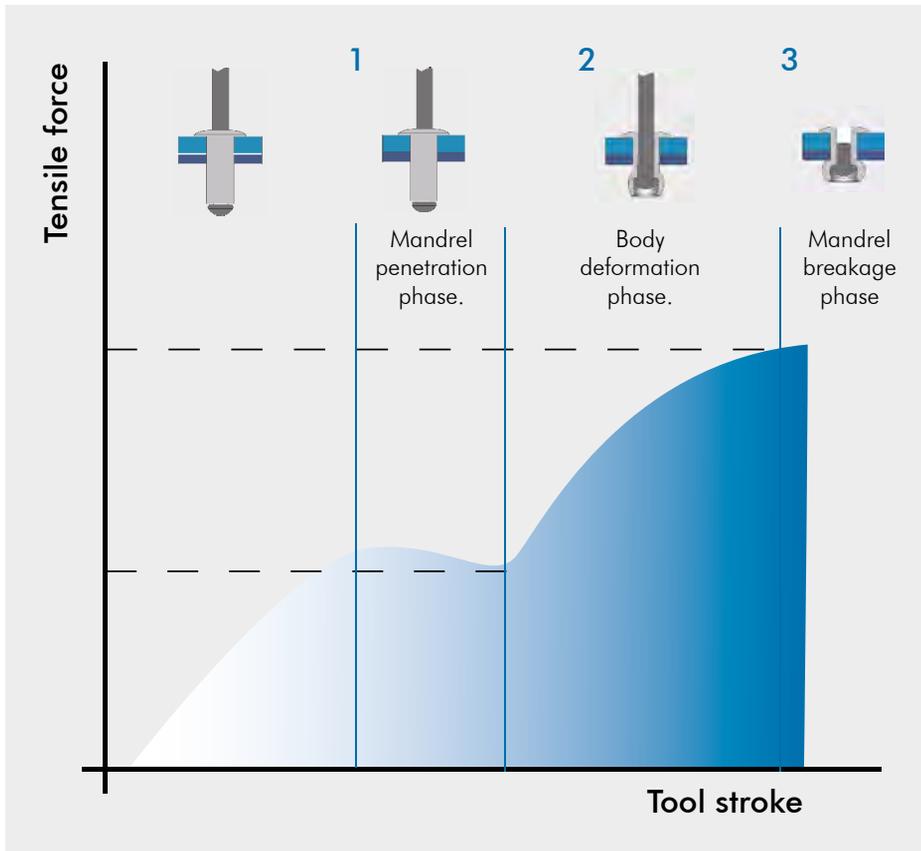

APPLICATION MATERIAL	RIVET HEAD MATERIAL					
	Aluminium	Steel + Zinc	Inox. austenitic	Copper	Monel	Steel + Ni-Zn
ALUMINIUM	Optimum	Moderate	Okay	Moderate	Okay	Okay
STEEL + RECU. ZINC NICKEL	Okay	Optimum	Okay	Moderate	Okay	Okay
STAINLESS STEEL AUSTENITIC	Not recommended	Not recommended	Optimum	Not recommended	Okay	Not recommended
COPPER	Not recommended	Not recommended	Okay	Optimum	Okay	Not recommended
MONEL	Not recommended	Not recommended	Okay	Not recommended	Optimum	Not recommended

Joints with moderate compatibility can be substantially accelerated in the presence of an electrolyte. In general, the rivet should be more cathodic than the elements to be joined to protect the joint made by the rivet.

With the BRALO riveting tools fast installation and low operating cost are achieved, maximizing productivity.

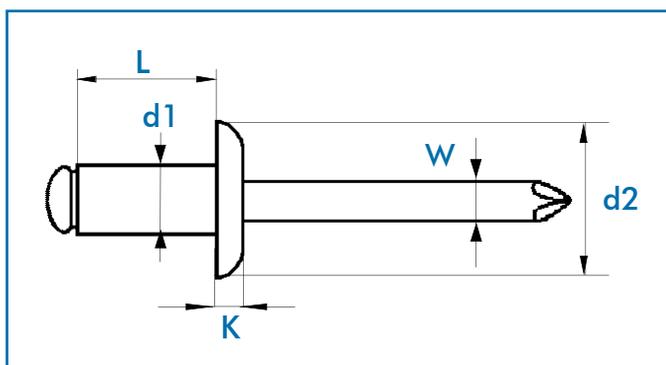

RIVETED FORCE PROCESS CHART

1. Put the rivet into the nosepiece and insert it into the hole.
2. Push the trigger of the tool so the mandrel enters into the rivet head. The hole is completely filled and the mandrel ejects.
3. The rivet is firmly applied. When finished the tool expels the mandrel into the mandrel catcher.

TECHNICAL DATA

d1 Ø mm	L Nominal mm	 mm	d2 Ø mm	K mm	W Ø mm	PACKAGING Inner Outer	 E MIN. mm MAX.	 (N)	 (N)	REFERENCE
Diameter of the body	Length of the body	Diameter of the hole	Diameter of the head	Thickness of the head	Diameter of the mandrel	Packaging	Grip range			Reference

Tensile strength

Occurs when a riveted assembly is subjected to two forces in opposite directions applied in the symmetry axis of the rivet.

Shear strength

Occurs when a riveted assembly is subjected to two opposed forces, applied in the same plane which is perpendicular to the symmetry axis of the rivet.

BLIND RIVETS TYPES

BLIND RIVETS

A rivet is a fastening system designed to join two pieces of material, whether of the same or different materials, especially in applications where only one side is accessible. BRALO rivets provide a safe and resistant solution to many fastening problems.

STANDARD RIVET

Wide grip range.
Where especially high torque force is not needed.
Great variety of materials.
Fast, simple with great quality assembly.

MULTIGRIP RIVET

Multigrip features.
Excellent visual aspect on both sides.
Fills the hole perfectly.
Especially suitable for working with plastics and thin metal sheets.

VERSAGRIP RIVET

Multi-grip behavior.
Good filling of drill hole.
Suitable for thin metal sheets.

HARDVEX RIVET

Multigrip features.
High shear and tensile strength.
Provides vibration resistance.
Especially suitable to work with thin and soft materials.

TREBOL RIVET

Multigrip features.
High resistance to corrosion.
Mandrel locking system.
Designed to fasten rigid materials to soft or low resistance materials.

RIVET TREBOL WP (WATERPROOF)

Rivet sealed to the passage of water and other liquids.
Multi-thickness behavior that helps to have less inventory.
High resistance to corrosion in adverse atmospheric conditions.
Strong mandrel exit.

PEELED RIVET

Creates a locking head with a big diameter.
Ideal for the use in applications with soft or low resistance materials.
Allows for use in oversized holes.
Spreads the load and clamping force over a wide area.

SEALED RIVET

Moisture and pressure tight.
The joints are completely sealed to fluids, avoiding leakage of liquids or vapors.
Reduces the risk of electrical problems or vibrations.
The mandrel is completely locked within the head.

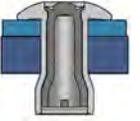

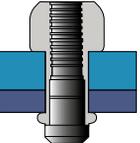

GROOVED RIVET

This fastener does not need through holes.
Safe method of joining metal to smooth and fibrous surfaces.
Provides a high resistance joint.
Ideal to fasten metal surfaces to wood, brick or cement.

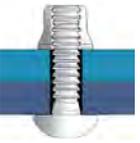

STRUCTURAL RIVETS

These are designed to meet the most demanding of applications, where an exceptional resistance for both tensile and shear strength is needed. Quick and easy to install, they provide unalterable fastening for extensive periods.

	<p>STRUCTURAL RIVET Multi-grip range features. High resistance to tensile and shear strength. Moisture and pressure tight. The hole is completely filled.</p>	
	<p>MULTILOCK RIVET Suitable for special applications to join widely separated materials. Great tightness. Good hole filling. High tensile and shear strength.</p>	
	<p>HARDLOCK RIVET Designed for elements that require exceptional tensile and shear strengths. Effective head locking system through a mechanical locking of the grooves. Especially suitable to work with thin sheet materials. Avoids any kind of electrical problems and noise.</p>	
	<p>G-BRA RIVET Suitable for high tensile and shear strength applications. Efficient retention thanks to the large locking head of the mandrel. Good hole backfilling ensuring mechanical mandrel locking to avoid electrical and vibration problems.</p>	
	<p>HARDGRIP RIVET Ideal for applications with hard plastics and thin sheets. Designed for demanding applications that require a great clamping force. High resistance to tensile and shear strengths. The hole is filled thoroughly.</p>	
	<p>ESTRUBOLT RIVET High tensile and shear strength for demanding applications. Tamper resistant. The locking system creates a vibration resistant joint. Lockbolt for blind sided applications.</p>	

LOCK BOLTS

A lock bolt is a two-piece metal fastener consisting of a collar and a grooved pin. It is secured when the collar is swaged onto the pin and pressed into place using a powerful tool. Lockbolts are used to create secure long term joints that are capable of withstanding heavy loads and vibrations. The tool grips the pin and the collar is swaged onto the pin grooves applying a direct tension. No torque is needed.

	<p>BRALOCK Multi-grip range features. Designed to have high tensile and shear strength. Provides vibration resistance. Used in industrial applications.</p>	
	<p>UNILOCK Controlling the break point characteristic. Retains a high clamping load. Excellent mechanical resistance. Obtains a clean uniform appearance.</p>	

BLIND RIVETS TYPES

SPEED RIVETS

Synonymous of speed and efficiency, they are supplied in a strip of paper (loading system) and placed using a repetition system with a single mandrel. Speed fastening offers a fast and high precision assembly that guarantee an increase in productivity. There are no interruptions and up to 60 rivets per minute can be set.

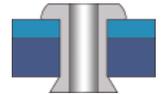

SPEED RIVET BSR

Suitable for applications in metal, plastic and aluminum alloys. Increases productivity. Expands radially during installation. Good resistance to shear strength.

SPEED RIVET BSV

Designed for joining of soft or low resistance materials. High precision and high quality assembly. Excellent hole filling properties. Good resistance to shear strength.

SPECIAL RIVETS

DRIVE RIVET

Ideal to join sheets and profiles to soft and fibrous surfaces or roofs. Through holes are not needed. Wide bearing area. Resistant to corrosion.

p. 80

RIVET SR

Resistant to humidity thanks to its special mandrel that plugs the hole of the blind rivet body. Resistant to vibrations.

p. 81

PROFILE CLINCHER RIVET

Customized design under request. Used in the automotive industry and in metalwork for moldings. Stepped body.

p. 82

GRIPMATE

Wide bearing area. Distributes the load. Recommended for use in applications with soft or low strength materials.

p. 83

MASS-RIVETS

Conceived to effectively earth on painted sheets without damaging the finished. Optimal conductivity and a solid and resistant fastening.

p. 83

ACCESSORIES

NYLON CAPS FOR RIVETS

Designed to protect and improve the visual aspect of blind rivets. Available in a wide range of colours.

STEEL WASHERS FOR RIVETS

Creates a locking head in blind rivets and in end closed insert nuts. They are extremely easy to use.

NYLON COVERS FOR RIVETS

The covers are put prior to the riveting process. A very simple and fast setting process. They can be used with rivets with a diameter of 4.8 mm and length up to 16 mm.

STEEL WASHERS FOR RIVETS

Used when the back side of the application is made of a soft or brittle material (plastic, wood, etc.) or when the hole size is drilled in the back end. Useful in repairs as a consequence of replacing rivets.

One of Bralo's commitments is to find a way to meet the special product needs of its customers. We design specialty parts and products for you from your drawings with a wide variety of materials and manufacturing methods.

Crimped rivet

Rivets with multi-thickness behavior.

Long mandrel rivet

Designed for special riveting machines or for long nosepieces.

Rivet compatible with oval holes

Designed to fix modules to solar panel structures.

Profile clincher

Applications that require separation for later assembly.

Slotted head

For special applications.

Grooved mandrel rivet

Intended for riveters to have a better grip. Generally for applications with high breaking load.

Conical rivet

Used when the hole is slightly oversized.

ICONS GLOSSARY

Air conditioning, HVAC, lifting, furniture, gutters, containers, electrical appliances and home and industrial appliances...

Construction of ventilated facades, profiles, lifelines, metal structures, roofs and facilities.

Automotive, bodywork, truck aluminium sidewalls, tarpaulins and industrial vehicles sectors.

Drywall.

Locks, handles, brackets, hinges for mailboxes and safes.

Ventilated facades.

Solar energy.

Light covers.

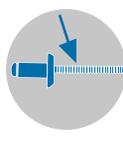

Available with long mandrel.

+S

Available with sealant over zinc plating.

Available with grooved mandrel.

+Zn

Under request, black Zinc-nickel galvanized rivets are made.

Under request, lacquered and anodized rivets are made. Under request minimum quantity and color according to RAL.

A4 INOX

Available in A4 stainless steel.

Available with countersunk head.

Available with large head.

HOW TO CHOOSE THE PROTECTIVE FINISH OR COATING

COATING	TYPE	FACTORS INVOLVED				
		CORROSION CONDITIONS	TEMPERATURE RESISTANCE	APPEARANCE	MATERIAL	
APPEARANCE-BASED FINISHES	Lacquered	Light		Moderate	By color	Alu/Steel/Inox
	Polished	Moderate		Moderate	Metal color	Alu/Copper
GALVANIC ZINC COATINGS	Zinc coated with transparent or iridescent passivation	Light		Moderate	Grey-iridescent gray	Steel
	Zinc coated with passivation or finished in black	Light		Moderate	Black	Steel
	Zinc with special passivation	Light	Moderate	Severe	Depend on passivation	Steel
GALVANIC ALLOY COATINGS	Zinc-Iron plating	Light	Moderate	Severe	Matt Grey	Steel
	Zinc-Iron plating with black finished	Light	Moderate	Severe	Matt Black	Steel
	Zinc-Nickel plating	Severe		Good	Grey	Steel
	Zinc-Nickel plating with black finished	Severe		Good	Black	Steel
NON-GALVANIC PROTECTIVE COATINGS	DeltaSeal Grey (aluminium base metal)	Severe		Moderate	Grey silver	Alu/Steel
	Delta seal black (aluminium base metal)	Severe		Moderate	Matt Black	Alu/Steel
PASSIVATION PROCESSES	Aluminium anodisation	Severe		Moderate	Silver or black	Alu
	Stainless steel passivation	Very severe		Good	Without changes	Stainless Steel

All coating are Cr VI (hexavalent chromium) free.

MOST COMMON COATINGS

EPOXIC PAINTING

BRALO standard rivets are available in an infinity of lacquering with liquid epoxy painting. From black to white, we have a range of over 150 RAL colours and we can make special lacquering upon request.

With working alongside the customer, we can make custom designs adapting to the specific needs of every application.

LACQUERS

BRALO have no limits when it comes to variety. Our extensive search for materials and our constant use of innovative technology have established the widest range of finishes in the market.

To improve the behavior of all the pieces in the open, various protective coatings and finishes are used, such as lacquering, where we find manual lacquering and automatic lacquering.

Acrylic paint is **highly durable** and **highly resistant to ultraviolet rays** as well to **sun exposure**. It is characterized by its mixture system with colour accuracy.

Painting the rivet's face side. Aluminium, steel, and stainless steel rivets are painted, regardless of quantity.

MANUAL COATING

Our working methods are more personalized because we carry out your projects with more precision, thanks to dry spraying devices with uniform flow distribution.

The already-assembled rivets are placed in trays; the head is lacquered, the fair face, the part that remains in the application.

This lacquering system is intended for clients with specific applications, such as ventilated facades.

AUTOMATIC COATING

At BRALO, we are characterized by being coating specialists. The production process consists of painting the rivet heads in an automatic device, connected to a motorgenerator. The equipment has a control panel to regulate the paint valves, pump movement, and the heating equipment.

Aluminum rivet heads are lacquered for construction and automotive applications.

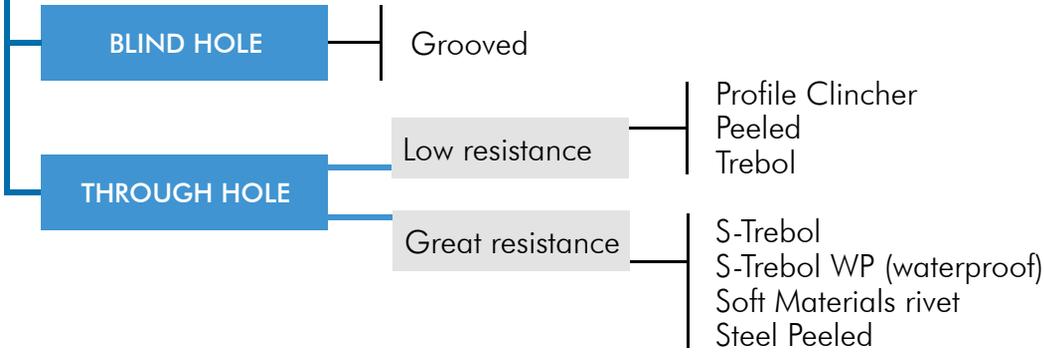

Painting aluminium rivet heads for a minimum quantity.

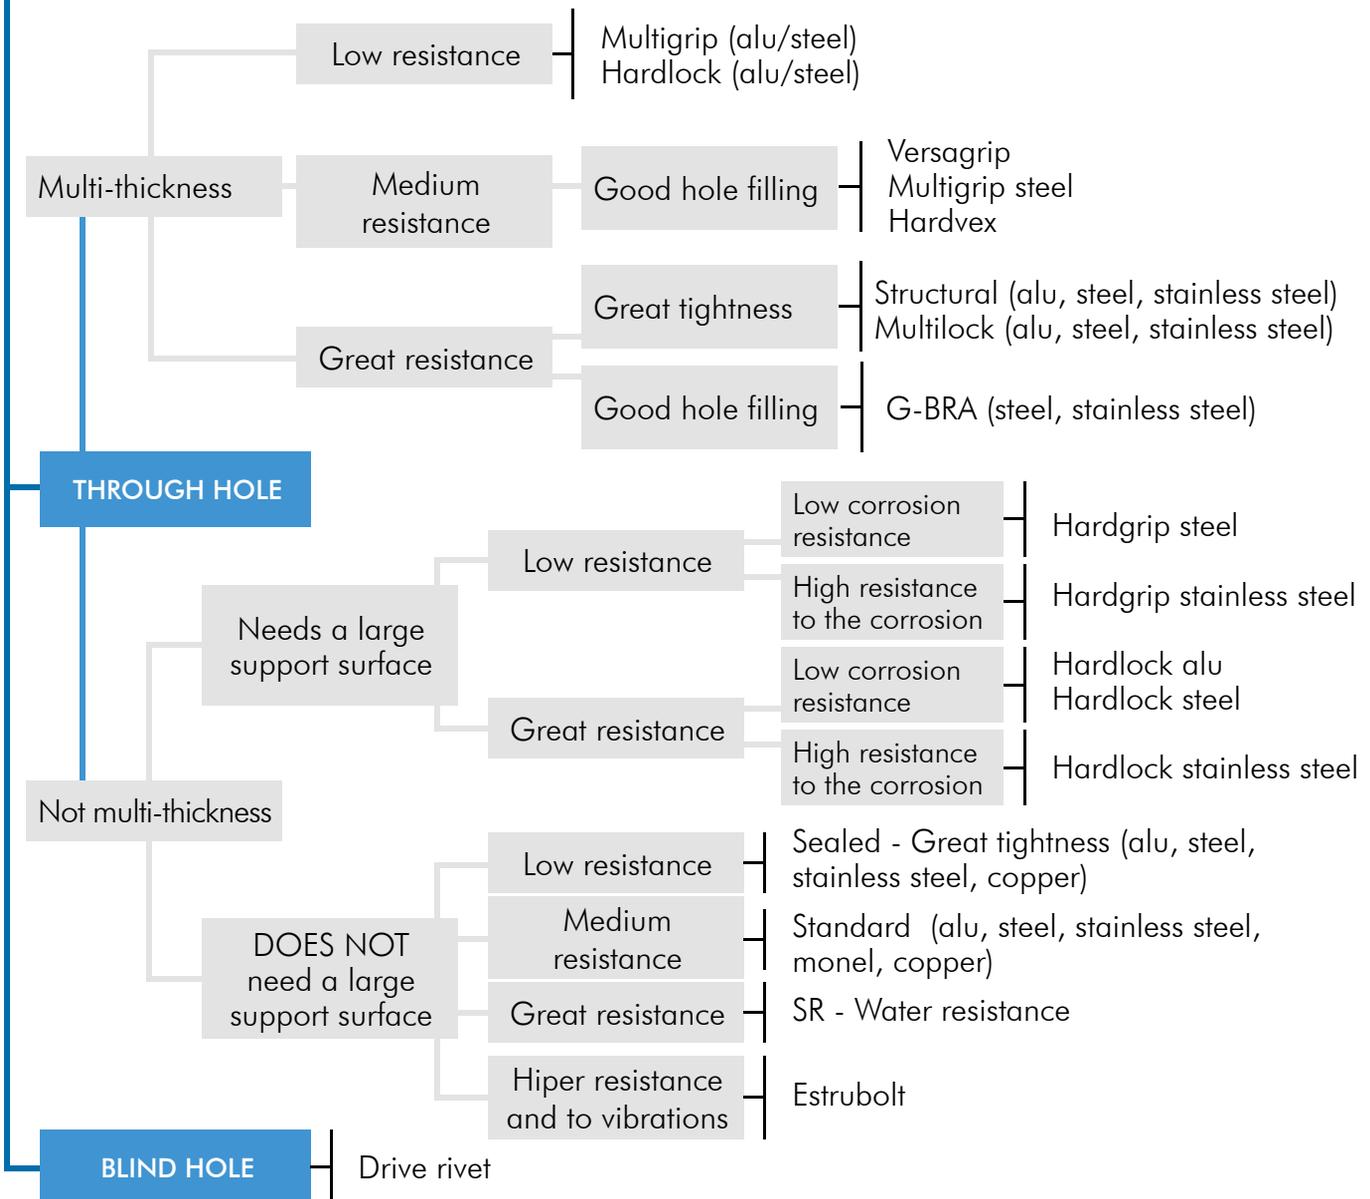

RIVET SELECTION GUIDE

HOW TO CHOOSE THE RIGHT PRODUCT FOR YOUR APPLICATION

SOFT BACK MATERIAL

RESISTANT BACK MATERIAL

ALUMINIUM RIVETS

Various protective coatings or surface treatments are used to improve the behavior of all parts for outdoors applications.

POSSIBLE COATINGS AND FINISHES

COATINGS AND PASSIVATION	APPEARANCE	USE IN CORROSION CONDITIONS	CHARACTERISTICS
Anodised	Silver or black	Severe	Protects from abrasion
Lacquering (epoxic painted)	According to color	Light	Available in more than 130 colours
Delta-Seal grey	Grey	Severe	Good conductivity
Delta-Seal black	Black	Severe	Good conductivity
Delta Protekt	Grey	Severe	Supports back painting
Polished	Metal	Moderate	Shiny and homogeneous surface

STANDARD RIVETS

Fixing elements that guarantee a secure and firm fixation. They are designed for joining all types of materials when an extra strong clamping force is not required.

- Different materials can be joined, with different types of manufacture.
- Wide range of thickness to rivet.
- Fast, cheap and high-quality assembly.

VERSAGRIP RIVETS

It is especially suitable for working with plastics and thin metal sheets.

Thanks to its homogeneous riveting it does not deform the surfaces.

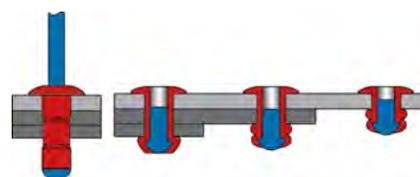

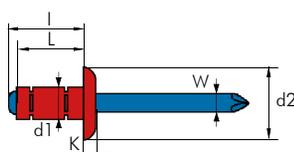

Double crimp
for better folding

- The inventory of rivets is reduced since with only three measures is covered a thickness range by 3 to 20 mm.
- Wide expansion of the blind side, the load and the clamping force are distributed.
- Suitable for working with plastics and thin metal sheets.

ALUMINIUM/STEEL

Tests according to EN ISO 14589

It has a broader formation of the head.
Ideal for thin sheet metal, especially for
repair works.

MULTIGRIP RIVETS

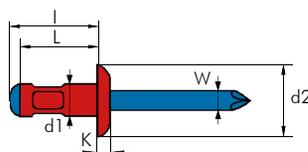

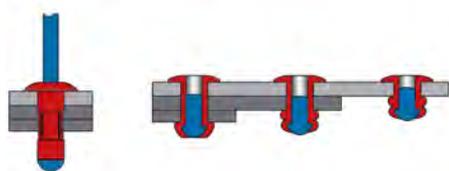

Pressing for better
filling of the drill hole

- Multi-thickness rivet covering a thickness range from 1 to 20 mm.
- The load and the clamping force remain distributed thanks to its wide expansion of the blind side.
- Used as a metal sheet repair rivet.

Especially suitable for plastic-to-metal bonding applications and with the characteristic of being a multi-thickness rivet.

HARDLOCK RIVETS

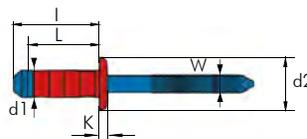

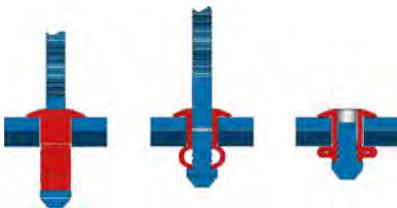

- Wide range of fixing thickness.
- Optimal distribution of the tightening on the blind face thanks to its larger contact surface.
- High tensile strength thanks to its rear bulb.
- Optimal mandrel retention.
- Grooved mandrel for longer jaw life.

GROOVED RIVETS

Aluminium alloy fastener element, suitable for applications with blind drills. The Bralo Grooved Rivet guarantees great grip efficiency.

- This fastener does not need through holes.
- Safe method of joining metal to smooth and fibrous surfaces.
- Provides a high resistance joint.
- Ideal to fasten metal surfaces to wood, brick or cement.

Tests according to EN ISO 14589

Fastener element that guarantees a strong and safe joint of low resistance materials, such as plastic or wood.

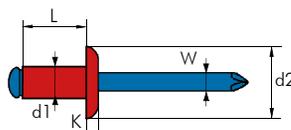

SOFT MATERIALS RIVETS

- It does not deform surfaces after the riveting process is finished.
- They provide excellent torque values.
- Good resistance to vibrations.

BRALO Trebol Rivet is a break-mandrel blind rivet designed for the fastening, in a fast and simple way, of rigid materials to soft or low resistance materials.

TREBOL RIVETS

HEAD WITH SHAPE OF THREE PARTS

- This rivet is provided with a big counter head in the shape of three double parts offering a **large contact area** on the blind side. This large expansion on the blind side **distributes the load and the clamping force**, reducing the risk of crushing and the material breaking.
- The S-Trebol version provides additional **resistance to both tensile and shear strengths** and it can be used in oversized holes because its expansion is adaptable. It also has a neoprene washer that provides **excellent sealing results**.

S-TREBOL WP RIVETS

The Bralo S-Trebol WP "Waterproof" Rivet is a break-mandrel blind rivet designed for demanding unions of rigid materials with soft or brittle materials in applications where sealing is required.

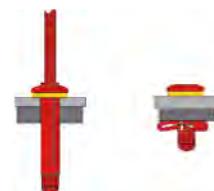

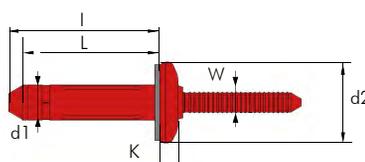

- Rivet sealed to the passage of water and other liquids and highly resistant to corrosion.
- Ideal for sheet metal supports.
- Provides additional resistance to both traction and shear.

The joints are completely water tight which avoids leakage of liquids or vapours due to the locking of the mandrel inside the rivet body.

SEALED RIVETS

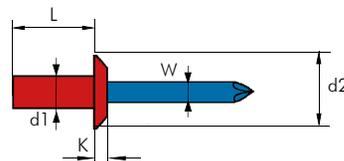

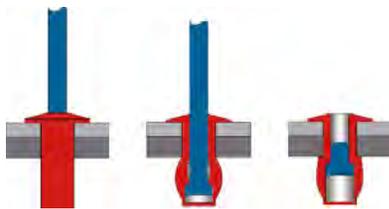

- They guarantee a solid fixation, they do not loosen due to dynamic stresses.
- The mandrel is completely locked within the head, avoiding electrical problems or pounding.
- It does not deform surfaces after the riveting process is finished (painted, glazed, etc.).
- Good performance with temperature variations.

STEEL RIVETS

For maximum corrosion resistance and durability of our steel rivet, we can apply different protective coatings, whether zincating or organic coating.

Air conditioning, lifting, furniture, gutters, containers, electrical appliances and home and industrial appliances.

Construction of ventilated facades, profiles, lifelines, metal structures, roofs and facilities.

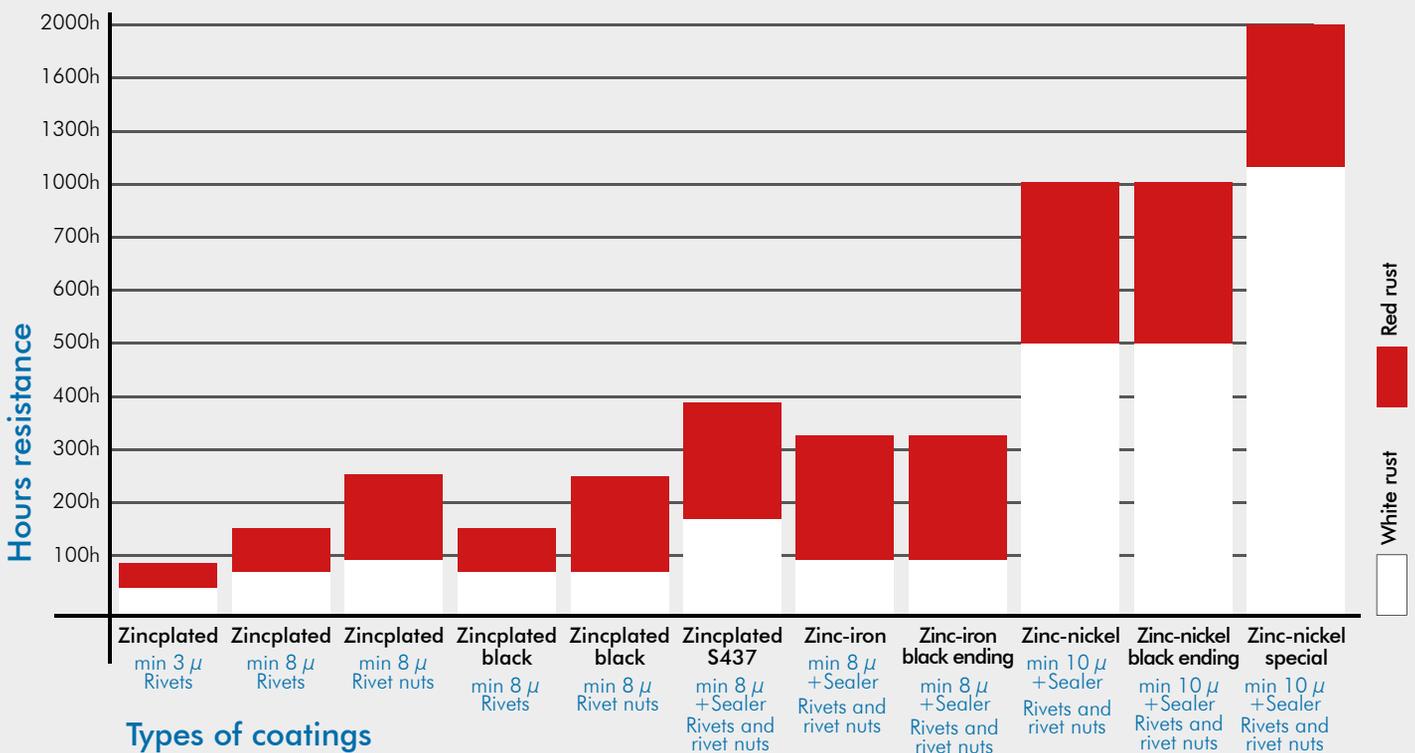

Automotive, bodywork, truck aluminium sidewalls, tarpaulins and industrial vehicles sectors.

COATINGS IN STEEL RIVETS

BRALO apply differets coatings, but for a maximum corrosion resistance and durability of the steel rivet or rivet nut, it is possible to apply a special sealer, (transparent or black).

CORROSION RESISTANCE OF BASE METAL

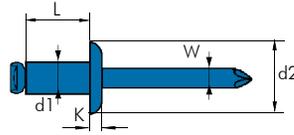

All the zincplated materials according to EN ISO 4042

STEEL RIVETS MULTI-THICKNESS

In BRALO we have a great variety of multi-thickness rivets. We can highlight the Multigrip, Hardvex and Hardgrip, which get a homogeneous riveting.

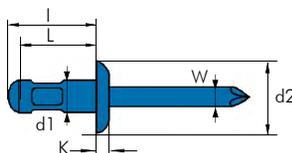

- Get a homogeneous riveting, achieving a solid union and high quality.
- Resistant to all type of vibrations.
- Provide an airtight seal against climate conditions.

STAINLESS STEEL RIVETS

Stainless steel has a high corrosion resistance and it is used for applications that are in hard environmental conditions.

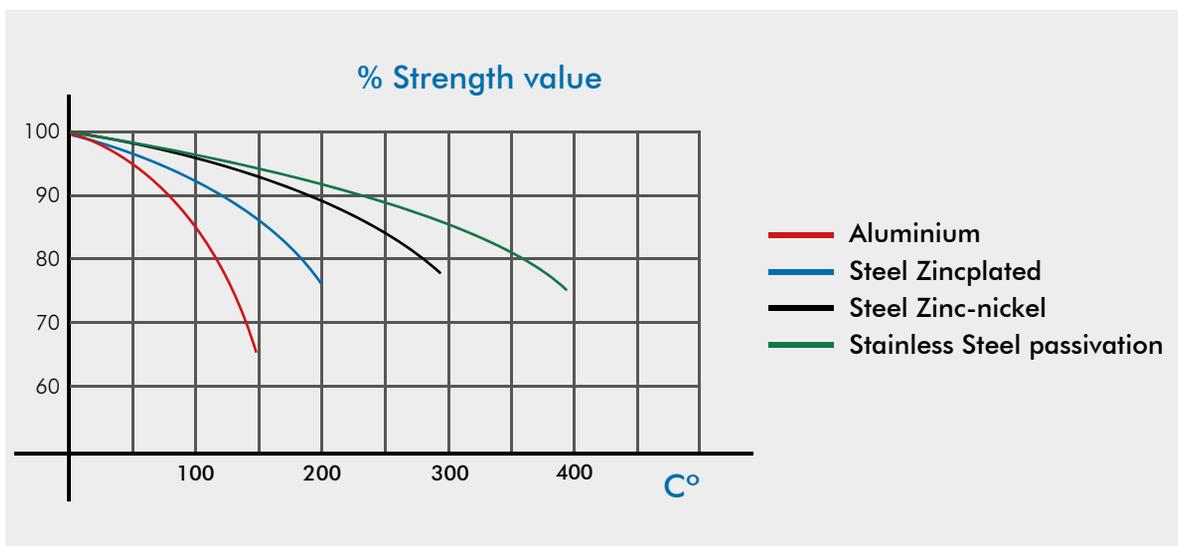

APPLICATIONS

COATINGS AND PASSIVATION	APPEARANCE	USE IN CORROSION CONDITIONS
Stainless Steel passivation	No change	Very severe

TEMPERATURE

BRALO uses different stainless steel, A2 stainless steel (AISI 304) and A4 stainless steel (AISI 316). We recommend selecting the rivet material according to the material of the joined parts in order to get greater resistance.

ALLOY RIVETS NICKEL COPPER (MONEL®)

Monel®* is a nickel-copper alloy (approx. 65% nickel, 33% copper and 2% iron)

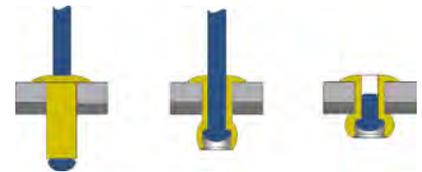

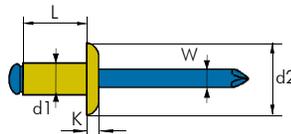

- High tensile strength.
- High resistance to atmospheric corrosion, salt water and many acids and alkaline solutions.

* The term "Monel" is a copyright protected brand name of the company Special Metals Corporation, Huntington (West Virginia), USA.

MONEL®/STEEL

BRALO Structural Rivets are designed to meet the most demanding of applications, where an exceptional resistance for both tensile and shear strength is needed.

STRUCTURAL RIVETS

APPLICATIONS

Structural rivets are widely used in vehicle structures, HVAC, construction and solar energy.

- Multi-grip range features.
- High resistance to tensile and shear strength.
- The hole is filled thoroughly.
- Moisture and pressure tight.

MULTILOCK RIVETS

BRALO High Strength or Multilock Rivets are designed for the most demanding applications, where exceptional strength is required, both to traction and shear.

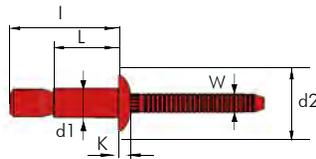

- High tensile and shear strength.
- Good hole filling.
- Resistant to vibrations due to internal locking of the mandrel.

The Bralo Hardlock rivet, due to its large expansion on the blind side, is suitable for applications with thin sheets.

HARDLOCK RIVETS

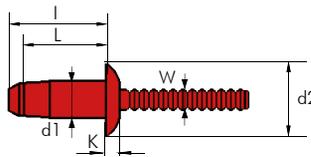

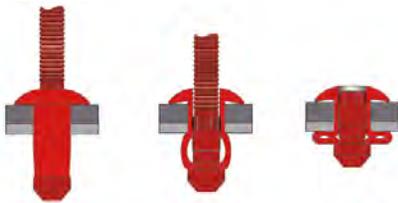

- Designed for elements that require exceptional tensile and shear strengths.
- Effective head locking system through a mechanical locking of the grooves.
- Especially suitable to work with thin sheet materials.
- Avoids any kind of electrical problems and noise.

Good hole filling that guarantees the mechanical locking of the mandrel to avoid electrical and vibration problems.

G-BRA RIVETS

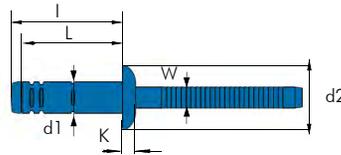

- Suitable for high tensile and shear strength applications.
- Efficient retention thanks to the large locking head of the mandrel, which transfers the clamping force to the application.
- Large grip area in final rivet ideal for thin thickness applications.

Its large bearing area on the blind side makes this Hardgrip Rivet ideal for applications with hard plastics and thin sheets.

HARDGRIP RIVETS

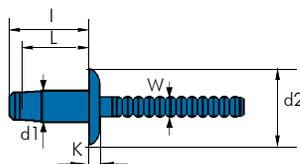

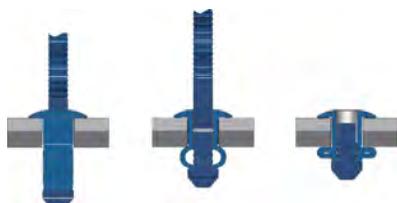

- Ideal for applications with hard plastics and thin sheets.
- Designed for the most demanding applications that require a great clamping force.
- High resistance to tensile and shear strengths.
- Fill the hole perfectly.

The Estrubolt rivet is a fixing that shares the advantages of a lockbolt to be used in blind accesses.

Its high tensile and shear strength make it ideal for use in demanding applications such as infrastructures, solar structures, mining, etc.

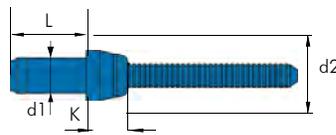

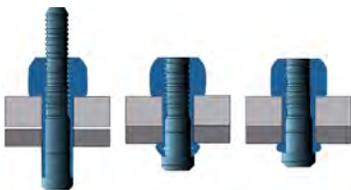

ESTRUBOLT RIVET

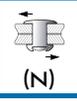

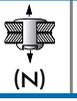

- Tamper resistant.
- Quick installation.
- High resistance to vibrations.

SPECIAL RIVETS

The rivet mandrel is forcefully introduced with a punch into the rivet body (aluminum), using for instance a hammer, opening the rivet body in 3 different blades fixing it inside the walls of the material to be fixed.

- No through holes required.
- Wide support surface.
- Corrosion resistant.

Note: The EPDM washers increase the tightness of rivets and nuts. They can be easily placed on the fastening element.

SPEED RIVETS

They are supplied pre-loaded on a paper strip and are laid using a single mandrel repeat system.

- At the end of a riveting cycle, the next rivet is automatically fed into the tool's nozzle, ready to start a new riveting cycle.
- The result is a fastener with high clampability and good shear strength.
- High speed riveting eliminates the need for individual mandrel, improving the working area and helping to achieve more sustainable production environments.

BSV

Designed for the joining of soft or low resistance materials.

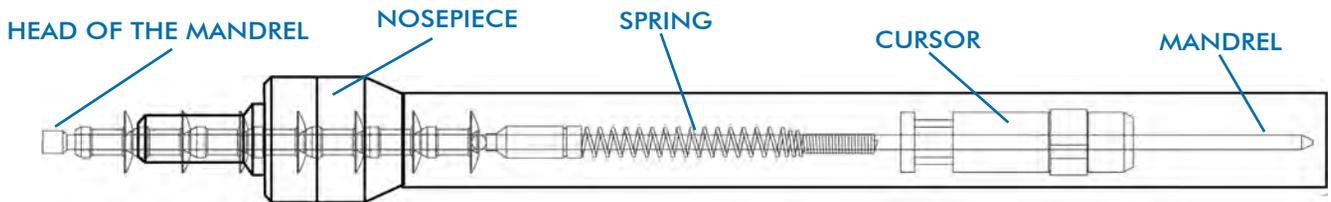

BSR

Suitable for applications in metal, plastic and aluminum alloys.

FEATURES AND BENEFITS

- One-sided and high-speed assembly; the mounting cycle time does not exceed 2 seconds.
- Assembly of high precision and quality.
- Increases productivity, there are no interruptions and up to 60 rivets per minute can be placed.
- Diversity as it is available in different materials, aluminium, steel and stainless steel, and different measures.
- It does not deform surfaces once riveted (painted, enamelled, etc.).
- You can join materials with different types of fabrication: composites, laminated materials, heat treated, etc.
- Conical end to facilitate the embouchure in the drill hole.
- Radial expansion during installation, ensuring an excellent filling of the drill.
- They have no internal mandrel so there are no noises or stalks.
- They are not loosened by vibrations.
- Its bulged or preformed end, offers a high tightness in the union, and a good resistance to shearing.

SPEED RIVETS

PLACEMENT OF SPEED RIVETS RR-10

1. Place the desired nosepiece (Fig. A).
2. Insert the mandrel into the strip of paper containing the rivets (Fig. B).
3. Position the spring at the end of the mandrel (Fig. C).
4. Remove the paper sheath according to the image (Fig.D).
5. Open the nosepiece by hand and place the mandrel with rivets and spring in the riveter (Fig.E).
6. Adjust the distance between the nosepiece and the head of the first rivet (Fig. F).
7. . Connect the compressed air supply.

Place the rivet in the hole and **start the riveting process.**

Figure B

Figure C

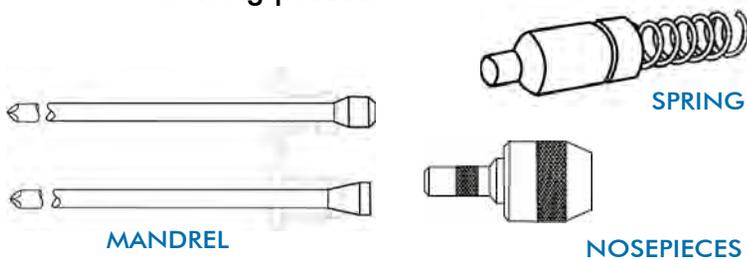

Figure D

Figure E

Figure F

MANDREL

SPRING

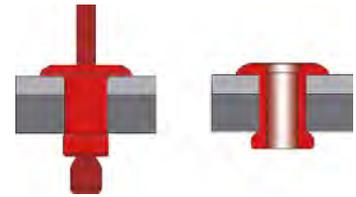

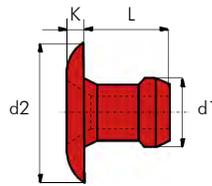

NOSEPIECES

EQUIPMENT

- The equipment always consists of three elements: nosepiece, mandrel and spring.
- The three elements are linked to the rivets and the size of the drill in the application.
- BRALO will help you choose the correct setup, since correctly choosing a nosepiece means correctly done, high-quality riveting.
- The mandrels and springs used in rapid riveting should be selected based on the type of rivet as well as its diameter.

SPEED RIVET

BLIND RIVET NUTS

BRALO rivet nuts provide a fast, reliable and simple fastening system with high quality and resistance.

Air conditioning, lifting, furniture, gutters, containers, HVAC, electrical appliances and home and industrial appliances...

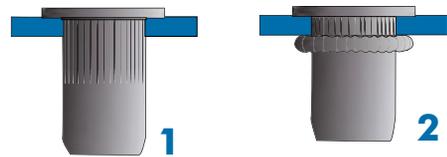

Construction of ventilated facades, profiles, lifelines, metal structures, roofs and facilities.

Automotive, bodywork, truck aluminium sidewalls, tarpaulins and industrial vehicles sectors.

- Rivet nuts are a mechanical fastener that provide a thread feature in applications with soft materials or with a small grip.
- They are used for fastening materials with a single side access, such as hinges, supports or panels.
- As no retouching is necessary after placement, even on already coated or painted pieces, it can be assembled at any stage of production.

RIVETING PROCESS

1. Insert the rivet nut onto the tool and then into the hole. Push the trigger and the tool will set the main body, completely filling the hole through a radial expansion.
2. The rivet nut reduces after being set. Finally, unscrew the nut from the tool.

STANDARD HEAD TYPES

REDUCED HEAD

It offers the possibility of creating a virtual flat surface without the need of countersinking.

COUNTERSUNK HEAD

This type of head creates a flush surface as a countersunk drill is applied in the application.

LARGE HEAD

It provides a large bearing area that strengthens the hole and prevents traction and pulling failures. It can also be used as a separator.

TYPES OF ENDING

OPEN END

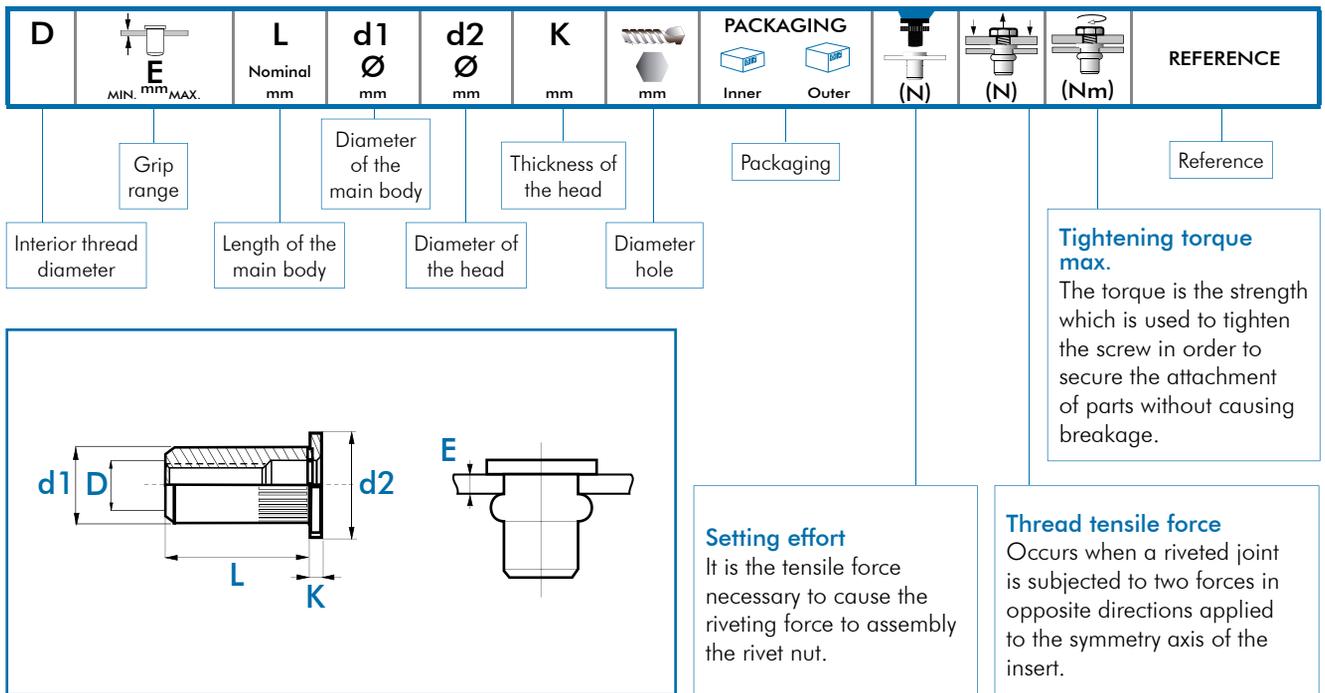

It offers the possibility of inserting a screw in order to get vibration resistance.

CLOSED END

This type of rivet nut is ideal when a sealed end is needed to guarantee a watertight application.

DIMENSIONS

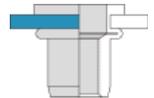

RIVET NUTS TYPES

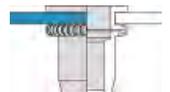

CYLINDRICAL RIVET NUT

Especially designed to work with resistant materials. Particularly used in leveling work. Excellent solution to obtain a resistant thread in parts with a reduced thickness. Its installation can be incorporated at any stage of production.

GROOVED RIVET NUT

Ideal for applications with thin metal sheets, tubes, extrusion or plastic. It resists frequent unscrewing. Improves its resistance to rotation once it has been set. Fast and high precision assembly.

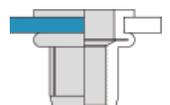

HEXAGON RIVET NUT

Offers an exceptional mechanical resistance. Resistance to rotation and extraction in thin sheets. Fast and high precision assembly. Withstands frequent unscrewing.

HALF HEXAGON RIVET NUT

Exceptional mechanical resistance. Fast and high precision assembly. Ideal for applications with thin metal sheets, tubes, extrusion or plastic. The conical end of the body and the hexagonal shape allow for an easy insertion.

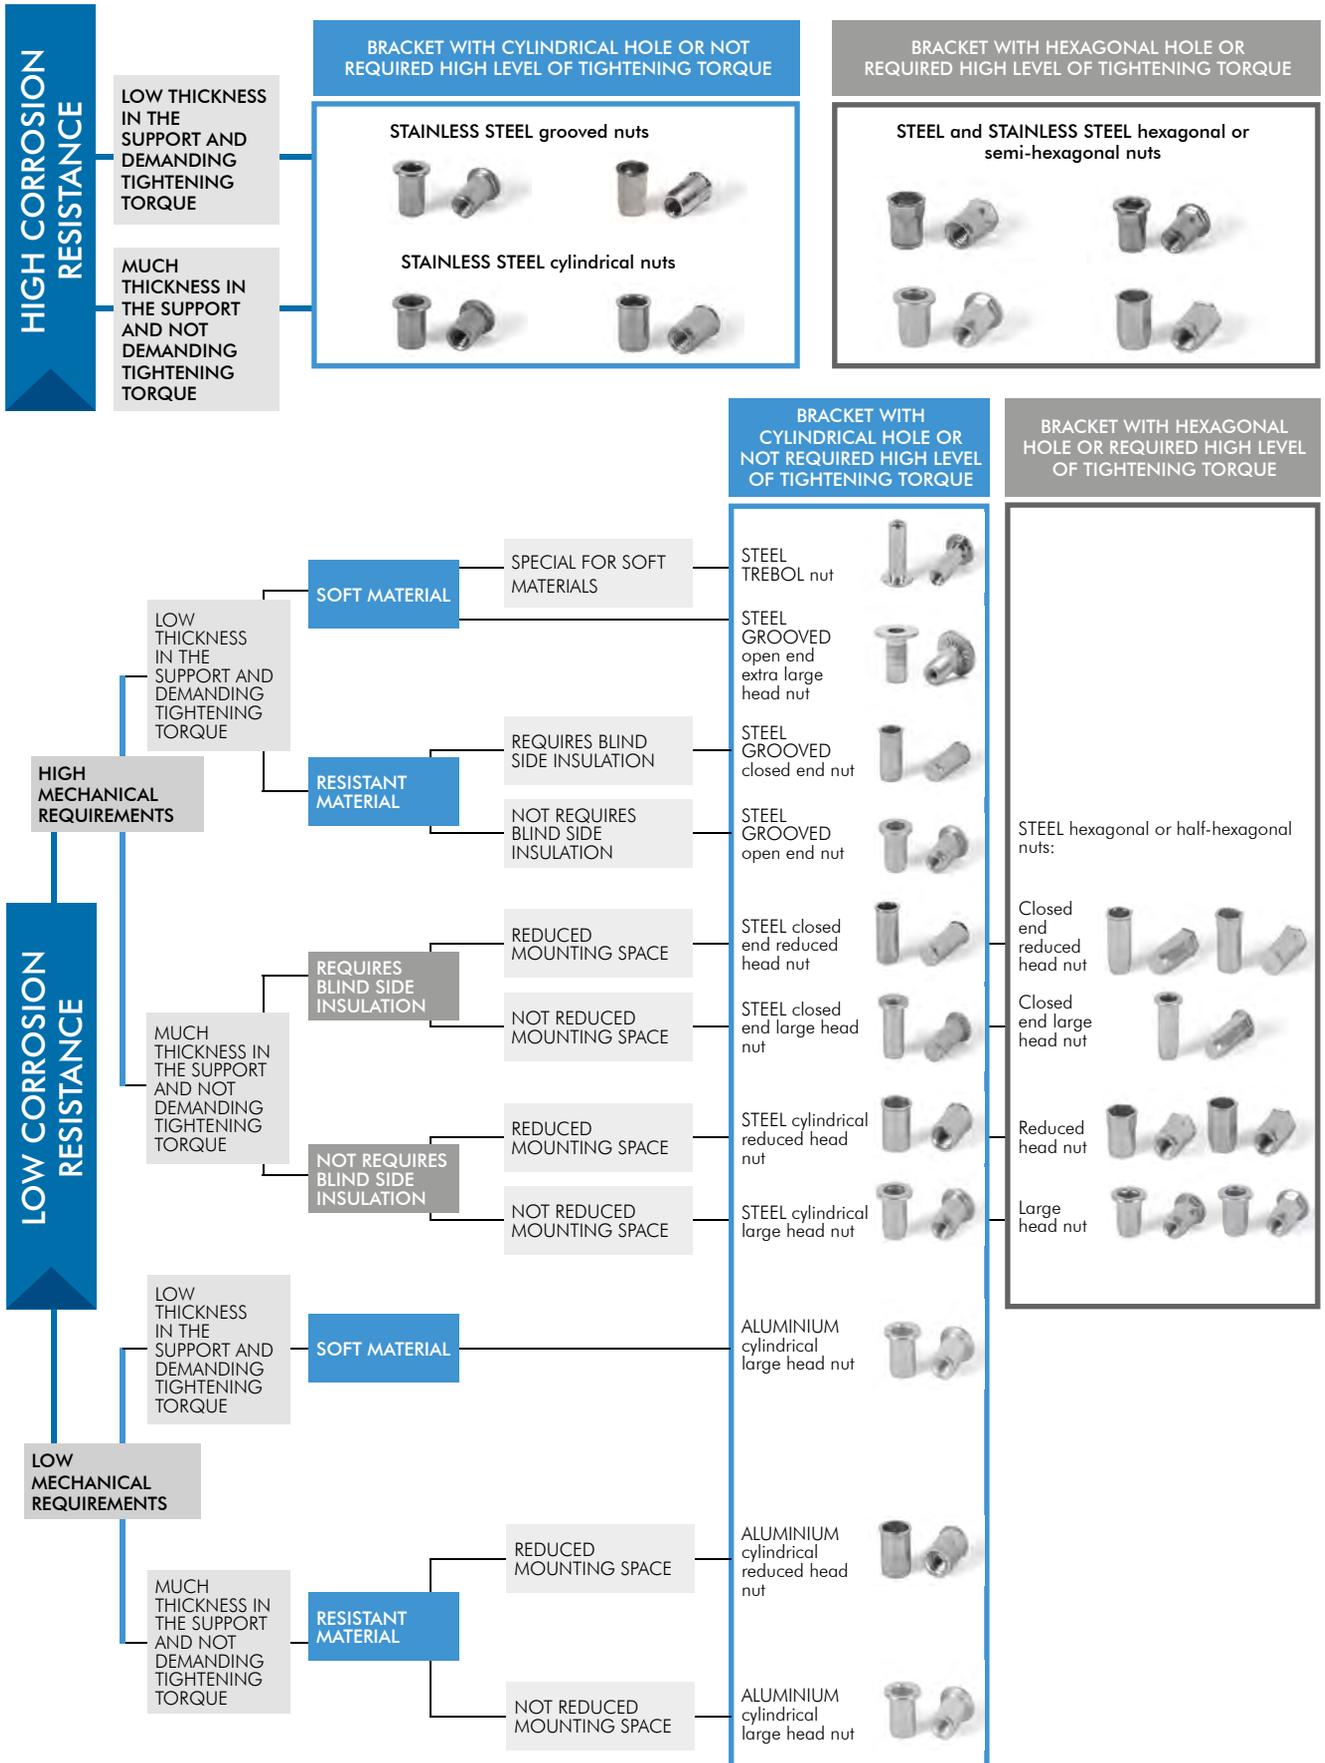

GROOVED AND HALF HEXAGON BLIND RIVET STUD

Allows for a pre-installation of the piece to be screwed onto the male thread. Designed for use with applications with heavy parts or those where access is difficult. Used in air conditioning systems, electrical appliances and electronics. Improves the resistance to rotation.

RIVET NUT SELECTION GUIDE

HOW TO CHOOSE THE RIGHT PRODUCT FOR YOUR APPLICATION

WHEN INSULATION OF THE BLIND SIDE OR TIGHTENING IS REQUIRED, CLOSED END NUTS MUST BE MADE UPON REQUEST.
 IN BRALO WE HAVE COUNTERSUNK HEAD NUTS THAT OFFER A FLAT SURFACE BECAUSE THEIR DRILL IS ALSO COUNTERSUNKED.

1

Diameter of the head.

BRALO offer many different sizes ranging from M3 to M12. Head selected according to the base material.

4

Range to assemble.

It is necessary to choose the nut that has the parameters within the range of the work to assemble.

2

Nut shape.

There are six types of BRALO nuts: plain, grooved, hexagonal, semi-hexagonal, trebol and rivet stud. also have diverse characteristics such as torque setting, strengths and materials.

5

Corrosion resistance.

We shall attempt to break the contact between the two metals to reduce the corrosion, by using zincplatings, protective coatings or paintings, that prevent any contact between materials: galvanised, anodised, zinc nickel, etc. (See p.16).

3

Types of head.

Three types of heads, low head, countersunk and wide, depending on the finish you want to achieve.

SEALING PARTS

At Bralo, to guarantee the watertightness of the fixings, we have two possible solutions applicable to both rivets, rivet nuts and special pieces: Custom polymeric washers and sealant application.

TREATMENT BY SEALANT

It consists of an elastic, heat-cured polyurethane applied under the head of the rivet or nut in question. When riveting, the SEALANT adapts to the geometry, guaranteeing tightness.

ADVANTAGES OF TREATMENT BY SEALANT

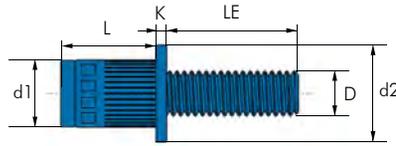

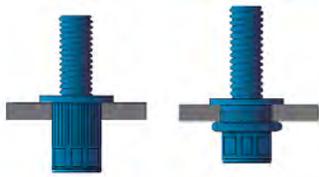

- Replaces washers, o-rings and resins.
- Immediate and effective sealing after assembly.
- Product attached to the piece. Eliminates the possibility of disassembly or assembly error.
- Resistance to water, oils, coolants, brake fluids, gases etc.
- It is applied to pieces of type of materials: steel, stainless steel, aluminum ...
- And it can be installed in all kinds of applications such as steel, aluminum, stainless, composite and plastic plates.
- This coating can be applied on small pieces.

PNEUMATIC RIVETING TOOL FOR RIVETS

The **BNT range** are **professional riveting tool** that set rivets at high speed. Pneumatic tools that **increase productivity** thanks to their technical characteristics.

- ▶ **High riveting force** for series applications.
- ▶ **Light tool.**
- ▶ **Easy maintenance and high durability parts**, it has parts more resistant and reliable.
- ▶ **Ergonomics and stability**, thanks to the balanced design and low vibrations.
- ▶ **100% use of air pressure.**
- ▶ **Suction system** through the graduation valve.

WHICH PNEUMATIC TOOL TO CHOOSE?

* It needs special nosepiece.

** It needs special nosepieces and jaws.

*** It needs special jaws.

FEATURES

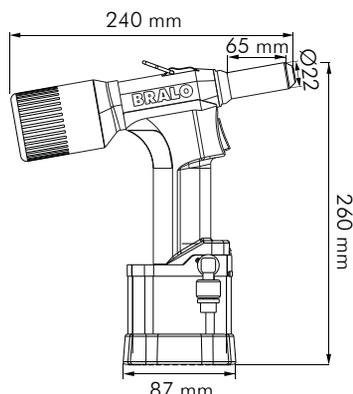

- Main body made of **high-density aluminum**.
- **Transparent mandrel collector** for increased safety and visibility.
- **Security valve**.
- **Air control valve**.
- **High resistance rubber base**.
- Ring for hanging.
- Anodized for greater resistance.
- Head or nozzle holder with access to **narrow riveting points**.
- **Ergonomic handles**.

ACCESSORIES BNT

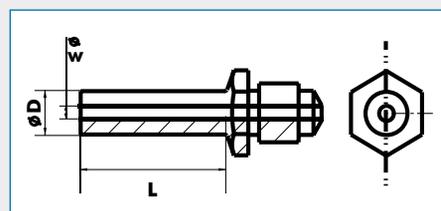

The BNT pneumatic tools have a standard mandrel catcher for short mandrel rivets. If you need to set long mandrel rivets -more than 45 mm long - in your application-, it is advisable to purchase the special mandrel catcher for long mandrels that is supplied as optional accessory and special nosepieces too.

MANDREL COLLECTOR

SPECIAL NOSEPIECES FOR LONG MANDRELS

BNT pneumatic riveting tools offer as optional accessories special nosepieces for long mandrel rivets from 3.0 to 5.0 mm diameter.

Check prices in our SPARE PARTS PRICELIST

Powerful and ergonomic tools, with an efficient configuration system, designed to meet the needs of the most demanding applications.

HT RANGE

HYDRO-PNEUMATIC EQUIPMENTS POWER AND SPEED

- ▶ Range for **high strength rivets** such as collar, structural and Estrubolt.
- ▶ **Ergonomic gun** made of aluminum.
- ▶ **Quick and easy** to use installation equipment.
- ▶ Ideal to be used in **assembly lines**.
- ▶ **Silent tools**.
- ▶ **High durability** and easy maintenance.
- ▶ They get a **quality rivet**.

OLEO-PNEUMATIC RIVETING TOOL FOR RIVET NUTS

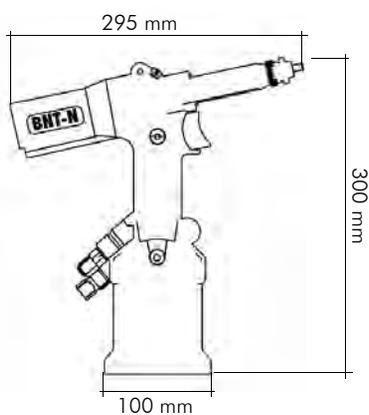

High-performance professional tool capable of riveting the same nut in applications of different thicknesses without any additional setting.

The BNT-N Professional Riveter has the capacity to fit M-3 to M-10 rivet nuts, M-4 to M-8 Studs nuts and UNC rivet nuts.

BNT-N

PROFESSIONAL OLEOPNEUMATIC RIVETING FOR RIVET NUTS

BNT-N (without Kit)

Ref. 02BNTN010

Metric KIT to be chosen by the customer (see accessory tables BNT-N). Check the price.

CHARACTERISTICS

- Professional equipment, quality riveting.
- Ideal for applications with different thicknesses.
- Increase productivity.
- High impact resistance.
- Reduces operator fatigue due to its low weight.
- Ergonomic tool.
- High durability.

TECHNICAL DATA

WEIGHT: 2100 grs.

STROKE: 7 mm.

PULL FORCE: 17.700N

CAPACITY: M-3 to M-10, stud nuts from M-4 to M-8 and UNC rivet nuts.

**The M8 Stud nuts kit is supplied with a special mandrel holder.

HIGHLY RELIABLE, FAST AND POWERFUL MACHINE
FOR DEMANDING APPLICATIONS

HT-80N

Ref. 02HT80N10

CHARACTERISTICS

- Installation kit **quick and easy to use.**
- Ideal to be used on **assembly lines.**
- Fitting a **large number of nuts.**
- **Silent** tool.
- **High durability** and **easy maintenance.**
- Stroke and pressure **adjustment** of the machine
- Get a **quality result.**

6.0	*	*	*	*

* It needs a nosepiece that is supplied as accessory.

- For use both in and outdoors.
- Main body, levers and the anchoring are made of the highest quality steel.
- Head for access to difficult riveting places.
- Comfortable and ergonomic handles.
- Only one of the levers can be moved, for use in reduced spaces.
- A cavity within the tool for the additional nosepieces.

FEATURES

- Main body manufactured in a high density aluminium casting.
- Levers and anchoring made of high quality steel for more resistance.
- Comfortable and ergonomic handles.
- Mandrel collector to keep the cleanliness and safety of the working area.
- Solid, safe and durable tool.
- Supplied with additional nosepieces.

M-12	✓	✓	✓

CHARACTERISTICS

- Usable for indoor and outdoor applications.
- Ideal to fix elements in tight spaces or with difficult access.
- It works with reduced consumption of force thanks to the special design of the lever.
- Easy and quick change of mandrels.
- Ergonomic handles.

TECHNICAL DATA

WEIGHT: 1000 grs.
LENGTH: 210 mm.
STROKE: 8 mm.
CAPACITY: M4 to M12, Stud nuts and UNC rivet nuts.

ACCESSORIES TR-412

The riveter is equipped with mandrels and nosepieces for M-5 to M-12. The M-4 Rivet Nuts will be supplied as an accessory. The M-4, M-5 and M-6 Stud nuts Kits are supplied as accessories.

CHARACTERISTICS

- Main body is made in a high density aluminium casting.
- The multiplier effect guarantees that just a minimum amount of strength is required.
- Ergonomic handles that facilitate the riveting process.
- Easy to adjust and to fix the stroke through a knurled adjustment nut.
- Hand threading and unthreading of the rivet nut with a central rotating handle.

TECHNICAL DATA

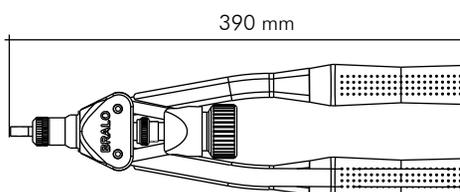

WEIGHT: 1.470 grs.
LENGTH: 390 mm.
STROKE: 6 mm.
CAPACITY: M-3 to M-8 and Stud nuts
