High-Performance Saws for the Steel and Metalworking Industry
Steel Plate and Profile Machining Equipment

EISELE

Perfection from Tradition

It is the passion for the sawing process that has been driving us as industry leaders in band saw and circular saw technology.

Andreas Behringer, Christian Behringer and Thomas Großkopf now head the company in its fourth generation of family management

Innovative Sawing technology – A worthwhile investment
 Whether shop floor model or high-end industrial saws – our aim is to be always „one step ahead“ in terms of sawing performance and accuracy. We work closely together with saw blade manufacturers, we carry out tests with materials from our customers, and we are always looking for new challenges in the field of cutting steel, aluminum and special alloys. Through our constantly improving saw technology and innovation, we are able to support our customers and to give them a clear advantage in times of fierce competition. Such an investment is worthwhile from the very first day.

We are BEHRINGER – With passion
 It is the ambition of everyone on our team, which brings us forward. Our highly qualified engineers and technicians are working constantly to improve

and further enhance our products. They conceive new products and features, refine, develop, and manufacture our high-performance saws in a committed and target-oriented manner. We are always striving for perfection – always with enthusiasm for new challenges.

Made by BEHRINGER – Made in Germany
 “From red iron to the finished product” – the extensive production depth, high-end machining centers, state-of-the-art manufacturing methods and the integrated quality assurance system ensure the high quality standard of our products at every stage. Our own latest-state-of-the-art foundry and our long experience in the field of ductile and cast iron contribute to the premium quality of our cast components. This is how we achieve a high degree of toughness, a solid construction for maximum performance, high cutting accuracy and long service life of the tools and of every original BEHRINGER sawing machine.

Customer-oriented sawing concepts
 We know exactly what our customers need in terms of sawing. We understand their needs by always keeping in touch.

Individual solutions are our strength
 BEHRINGER is an industry leader when it comes to customized solutions around the issue of material handling. We provide solutions specific to our customers needs and are able to act in the capacity of overall project manager if required.

The modular design concept behind our saws allows us to supply a perfect solution to address your specific needs – ensuring the safe handling of even the heaviest of parts.

We are local as well as global
 We are in places where our customers are – nationwide and international. With our locations in Germany, France, USA and China as well as with over 40 agencies worldwide, we are setting the standard in terms of implementing customer-focused service and communication. We know the markets, the industry, and its challenges.

A well-developed network of service technicians and service partners ensures prompt after-sales support on a manufacturer’s quality level. Our well-equipped spare parts storage and in-house manufacturing assure a fast and – even more importantly – reliable spare parts supply, even for saws, which have provided more than 30 years of service.

Semi-Automatic Bandsaws for Single Cuts

The affordable combination of high cutting output and simple handling.

- Easy accessibility
- Reliable material clamping
- Universal application

Versatile application

- Steel trade/steel construction
- Metal construction
- Mechanical engineering
- Aerospace industry
- Automotive and supply industry
- Forging industry
- Tool and mould making

Solutions for sawing additively manufactured components

Shorter time-to-market, lower material consumption and more degrees of freedom in design are just some of the reasons why 3D printing of metal parts is becoming more widespread.

The 3D series was developed for sawing 3D printing plates in different sizes up to 1,200 x 1,200 mm. Highest precision ensures optimal cutting results and guarantees that neither the printing plate nor the printed components are damaged.

- Quick and easy loading and unloading
- Zero-point stop system or NC axis
- Clamping options according to customer requirements
- Coolant filtration system standard

BEHRINGER HBE320-523

Technical Data Semi-Automatic Bandsaws

Model	Cutting range	
	90° round	90° flat W x H
HBE320-523	320	520 x 320

Fully Automatic Bandsaws for Versatile Application

Fast, precise execution of multiple cuts. Makes for optimum efficiency in every field of metalworking.

Stable cast construction and dual-column guides

- High stability
- Outstanding cutting accuracy
- Precise cut-off length
- Extreme efficiency
- Reliable operation
- Energy efficient
- Compact

Simple, reliable operation

- Good access to the machine
- User-friendly NC program control

Highest Performance by innovative Speed-Cutting Technology

To address the most stringent requirements in terms of cutting performance, automation and process reliability.

The innovative SpeedCutting technology of the HBM series allows process-reliable cutting performance that was previously unthinkable. It shows its full potential especially when cutting tool steels to stainless steels or high-alloy materials such as Inconel or Titanium in industry and the steel trade.

Thanks to the combination of a powerful machine base, modern servo technology, innovative cooling system and process-reliable chip disposal, the HBM gets the maximum out of the tool used - regardless of whether it is a carbide or bi-metal blade.

HBM cut-off gripper (option)

BEHRINGER HBM540A

Made for heavy-duty application

- Optimum processing quality
- Outstanding speed
- Unbeatable service life
- Process-safe material handling

Saws practically any steel type

- Tool steels
- Stainless steels
- Heat/acid-resistant steels
- High-alloy steels
- All structural and carbon steels

The ideal solution for aluminium too

- Special versions for aluminium machining
- Extreme cutting speeds
- Effective chip disposal

Low-manned production

- Available in range of automation stages, e.g. with magazine, cut-off gripper, marking unit etc.

Technical Data

Model	Cutting range		Feed length single stroke

Sawing Solutions for Aluminium

BEHRINGER offers a comprehensive portfolio of standard and special sawing machines for aluminium producers and aluminium processors.

Aluminium has good machining properties and high load capacities - with significant weight savings compared to steel. The use of aluminium components thus helps to save valuable resources. This is one of the reasons why the demand for this material is constantly increasing.

Cutting aluminium requires a special sawing solution. In addition to high cutting speed and effective chip disposal, the degree of automation is of central importance for the efficiency of a sawing system.

Sawing solutions from BEHRINGER are therefore specially designed to meet the requirements of the aluminium industry. An extensive range of band and circular saws is available for cutting ingots, cast billets or plates. But special solutions are also possible on the basis of the modular basic designs.

The main focus in aluminium processing is on the automation level. BEHRINGER industry solutions offer highly automated processes - from loading to the handling of samples and remnants to the automated sorting of the segments or the transfer to subsequent processes.

Continuous tracking of the production batches is ensured by interfaces with management systems and the integration of marking units.

HPS1000-2200T

Slicing saw for the production of aluminium plates

Especially in the non-ferrous metal trade, the production of aluminium plates with customer-specific thicknesses by sawing up aluminium blocks offers many advantages. The HPS series offers for this:

- Variable automation level
- High flexibility
- High cutting performance
- Chip extraction

BEHRINGER
VPS60-220A

Cut-off gripper in portal design

The combination of infeed and cut-off gripper allows fully automatic, unattended operation. The gantry design of the cut-off gripper with 3 axis allows the separation of trim cuts and remnants, test slices and good parts into designated deposit positions. An integrated scale automatically checks the weight of the cut-offs and reports this to the control system.

Disposal system in portal design

Especially for aluminium forging or extrusion applications with short cut-off lengths, disposal gantries represent an efficient handling solution. The sections are automatically stacked in transport trays provided and weighed and marked in parallel to production time.

Efficient transport solutions

The modular material handling system is as flexible as your sawing task demands. Get the best out of your production - we support you: as a leading problem solver and innovative system provider. We work closely with you to develop system concepts that are specially tailored to your needs with individual infeed, transfer and transport solutions in which everything fits together perfectly.

Mitre-Cutting Bandsaws – Universal and Flexible

Made for mitre cuts and steel profiles. Impressive output and cutting range.

For the highest demands on cutting performance, automation and process reliability in steel construction and steel trading, BEHRINGER bandsaws offer a convincing package.

Anyone who has to machine workpieces at a wide variety of angles will cut perfectly and, above all, profitably with the mitre bandsaws of the HBE series.

Everything included from the start

Standard functions on the HBE semi-automatic machines

- **BEHRINGER cutting pressure control**
Automatically adapts the saw feed of the machine to the changing material cross-sections.
- **Micro Spray System**
Longer service life due to constant moistening of the saw blade.

BEHRINGER HBE420-723G

Every cut a masterpiece of precision

- Optimum positioning accuracy for right/left mitre cuts
- Also for large cutting widths

Amazingly versatile

- Highly flexible, easy-to-operate angular adjustment
- Simple adjustment to individual requirements
- Wide-ranging different transport systems for simple material handling

The Specialists for Structural Steel Work

BEHRINGER HBE320-523GA

Developed for automatic mitre cuts in steel construction and sectional steel trade.

Mitre precision guaranteed

- Highly efficient through NC angular adjustment
- High degree of positioning accuracy with NC length measurement device
- High feed length even with single stroke
- Powerful PC control with bar optimization
- Reliable bundle cuts with package clamping unit (Option)

When the going gets Tough

Unadulterated power – our high-powered solutions for large, heavy workpieces. Reliable, precise and extremely solid.

The optimum solution when the going gets tough

- Highly stable design
- Extreme load-bearing capacity **up to 100 tons**
- Outstanding durability
- Extremely reliable

Wide application range

- Heavy-duty large forged components
- Ships' crankshafts
- Turbine shafts
- Large-scale tools
- Metal blocks etc.

Wide range of machine variants

- Machines with roller conveyors: Workpieces are transported on heavy-duty roller conveyors
- Table variants: Table is pushed with the workpiece through the fixed saw gantry
- Gantry design: Sawing frame travels over the fixed workpiece

Vertical Bandsaws for perfect longitudinal Cuts

New standard of precision for longitudinal dividing of plates and blocks. A highly popular option in the steel trade and for mould and tool makers.

BEHRINGER
LPS-T

Precision with every cut

- High precision for cutting lengths up to 8 m
- Suitable for wide-ranging steel blocks and plate stock

Set-up time close to zero

- Extremely simple, high-speed saw band changeover
- No tools required

Universal application scope

- Compact, space-saving construction
- Different variants for each application

Automatic cuts with the
LPS automatic

EISELE VMS 350 PV

Everything in their favour

- Simple operation
- Precise saw cuts
- Minimal space requirements
- Low-maintenance and long life
- Excellent cost-to-performance ratio

At home in workshops and industrial environments

- Forging workshops
- Metalworking shops
- Trainee workshops
- Repair and service departments

High-Performance Circular Saws for Mass Production

High-powered and precise: Designed especially for mass cutting of aluminium or high-output steel sawing - BEHRINGER EISELE offers you the best possible solution every time.

The degree of automation is determined by the sawing assignment

- Fully automatic circular saws for straight cuts: Optimum results and high performance for mass cutting of steel, aluminium and other NF metals. Round cutting range 240 mm (aluminium) and 190 mm (steel)
- The Multi-Fluid cooling concept multiplies the already high cutting performance many times over by combining different cooling / lubrication components in a most effective way.

Up-Strokeing Circular Saws

Wherever flexible, universal mitre cuts are required in a wide range of metals, you will find an efficient solution to your sawing application from BEHRINGER EISELE.

Special Application: Sawing Bent Tubes

- Specially designed for sawing curved tubes such as mufflers, hydro forming or exhaust pipes
- Flat material table enables individual workpiece fixtures to be accommodated
- The entry and exit point of the saw to the material can be freely adjusted for the use of various fixtures

BTS 460 NC

- Servo-motorized axes
- HCS saw unit allows use of carbide saw blades
- Identification of the fixture via RFID possible

From the semi-automatic mitre circular saw for metalworking shops through to the fully automatic circular sawing centre to address sophisticated, heavy-duty sawing requirements, a wide product portfolio is available to choose from.

We offer the entire periphery including user-friendly hardware and intelligent control software. For optimum sequences, maximum process reliability and a consistently high standard of quality for your products.

The heart of the PSU saw unit is the worm gear unit with EISELE shock-absorbing feature, produced in-house. It is heavy duty and provides for a smooth, low-vibration running of the saw, which, of course, has a positive impact on the quality of the cutting surface and the blade life.

Modern Steel Plate and Profile Machining Centres

High machining speeds, low operating costs and long machine service lives - these are the distinguishing features of VERNET BEHRINGER machining centres.

As a leading manufacturer of profile processing machines and systems, VERNET BEHRINGER develops and produces innovative, efficient machines and production lines for steel construction, specialists for transmission lines and other sectors where steel plates and profiles are machined.

New series for milling and high-speed drilling expand the comprehensive range. VERNET BEHRINGER offers turnkey solutions from a single source with extensive automation solutions for loading, unloading and sorting. In-house software development set standards in digitalization.

Saw-drill line for steel construction and trade

By combining a saw and a drill in one system, throughput and efficiency of the production are noticeably increased. The entire raw profile is measured, drilled, notched, marked and sawn in one operation.

Lines for Profile Steel Processing

Portal drilling machines with several spindles and machining lines in flexible design for punching, marking and shearing.

- HDX
- HDS
- MAPS
- KBA40

Lines for Machining Sheet Metal and Flat Steels

Equipment for punching, drilling, marking, flame cutting and deburring of sheet metal and flat steels.

- MAG
- FG
- MAG B

Lines for Machining Angle Profiles

Machines for punching, drilling, marking, milling and shearing angle profiles.

- VP-X
- VP-2X

BEHRINGER

The BEHRINGER Product Range

- Straight-Cutting Bandsaws
- Mitre-Cutting Bandsaws
- Plate and Block Bandsaws
- Large Bandsaws
- Solutions for sawing Additively Manufactured Components
- Workshop Bandsaws
- Efficient Transport Solutions
- Complete Sawing Systems – Overall Concepts

The BEHRINGER EISELE Product Range

- Vertical Circular Saws
- Up-Stroking Circular Saws
- High-Performance Aluminium Circular Saws
- High-Performance Automatic Circular Saws
- Loading Magazines and Material Handling Systems
- Integration into existing Processes

The VERNET BEHRINGER Product Range

- Profile Steel Machining Lines
- Lines for Machining Flat Steel and Plates
- Angular Profile Machining Lines
- Complete Systems – Overall Concepts
